Introduction.

W.D.Gann and Astro-The proof.

Ganns first trade on August 15th 1902.

Gann made one of his most important discoveries on August 8th 1908.

The W.D.Gann Astrological method solves the following trades.

Wheat September 30th 1909.

Cotton high 1923.

Cotton low 1953.

Cotton top in 1952 and the low in 1953.

Comparision of the Coffee low in 1953 and the high in 1954.

Coffee high 1954.

Soybean high September 14th 1941.

Soybean low October 17th 1941.

Soybeans sold November 14th 1941.

Soybean high November 23rd 1948.

Soybeans sold April 27th 1954.

Cotton high 30th November 1923.

Gann finished cotton trades and closed.

Soybeans sold April 27th 1954.

Soybeans buy/close May 5th 1954.

Soybeans sold again May 7th 1954.

W.D.Ganns scientific forecasts.

The Morning Telegraph artical on Gann December 17th 1922.

Dow Low August 24th 1921.

Dow top August 14th 1922.

Dow top October 8-15th 1922.

Panicky decline November 10th -14th 1922.

Summary of Ganns Sequence of stock market predictions September 3rd 1929 to July 21st 1933.

Top September 3rd 1929.

Low October 3rd 1931.

Low February 10th 1932.

Low February 10th 1932.

High March 8th 1932.

Low July 8th 1932.

High September 20-21st 1932.

Low October 4-5th 1932.

Low March 1st 1933.

High July 17th 1933.

Low July 21st 1933.

## Introduction

W.D. Gann believed that the angular relationships of the planets produced both cycles and prices and as these cycles/prices could be predicted out into the future because of the planets perfect mathematical relationship.

At any time astrology is considered sceptically by most people so its not surprising that Gann didn't advertise the fact that astrology was his main forecasting tool

In this book I have taken his predictions and where ever possible complete sequences of trades so that I could find the pattern that would reveal the secret of his method.

There are a lot of books written that claim that they know Ganns method. I think that there are a lot of Gann like methods but I doubt if the were the ones he used. This is why I decided to do an investigation based solely on what I could judge was factual eg his personal charts and his public predictions and trades.

W.D. Ganns career spanned 53 years from 1902 until 1955 and during this time he developed many techniques but when you read *The Ticker* interview it is obvious that his trading technique was already developed by 1909 and so this means that we can forget about any further methods that he used afterwards such as the master time overlays etc. In this book we are only interested in the things we know he used. Astrology is the beginning of everything as you will see by the analysis of his amazing wheat prediction of 1909 and the link between his greatest discovery made on August the 8th 1908 and the Lambert Gann emblem.

In this book you will see the same pattern revealed over and over again so there can be no doubt that this was his method.

While you are reading it may be difficult initially if you have never looked at astrology, not because of the concepts but because of the terminology and the planets glyphs I have used the full name for everything instead of the shorthand where ever I can because I want you to understand and recognise the pattern as quickly as you can. Remember Gann often mentioned the circle (cycle) the square and the triangle soon you will find out what he meant.

Also the moon plays a large part in the timing of events which is one of the points that he was making in *Tunnel thru the air*.

It is always hard learning a new language for the first time be it music or chart reading. The good thing from our point of view is that we are not concerned with any astrological symbolism only the position of the planets as viewed from earth (geocentric) You will need to refer to the glossary at the back but we are using three terms mainly, the trine (triangle-120 degrees conjunct meaning joined together and square meaning at a 90 degree angle).

This \* is used in place of the degree sign eg there are 360\* in a circle.

## W.D.Gann and Astrology - The Proof.

To prove to you that Gann really did use the positions of the planets I thought it would be interesting to take a look at Gann's actual price chart for May Soybeans from the years 1948-1949 and see what techniques we could see him using on the chart.

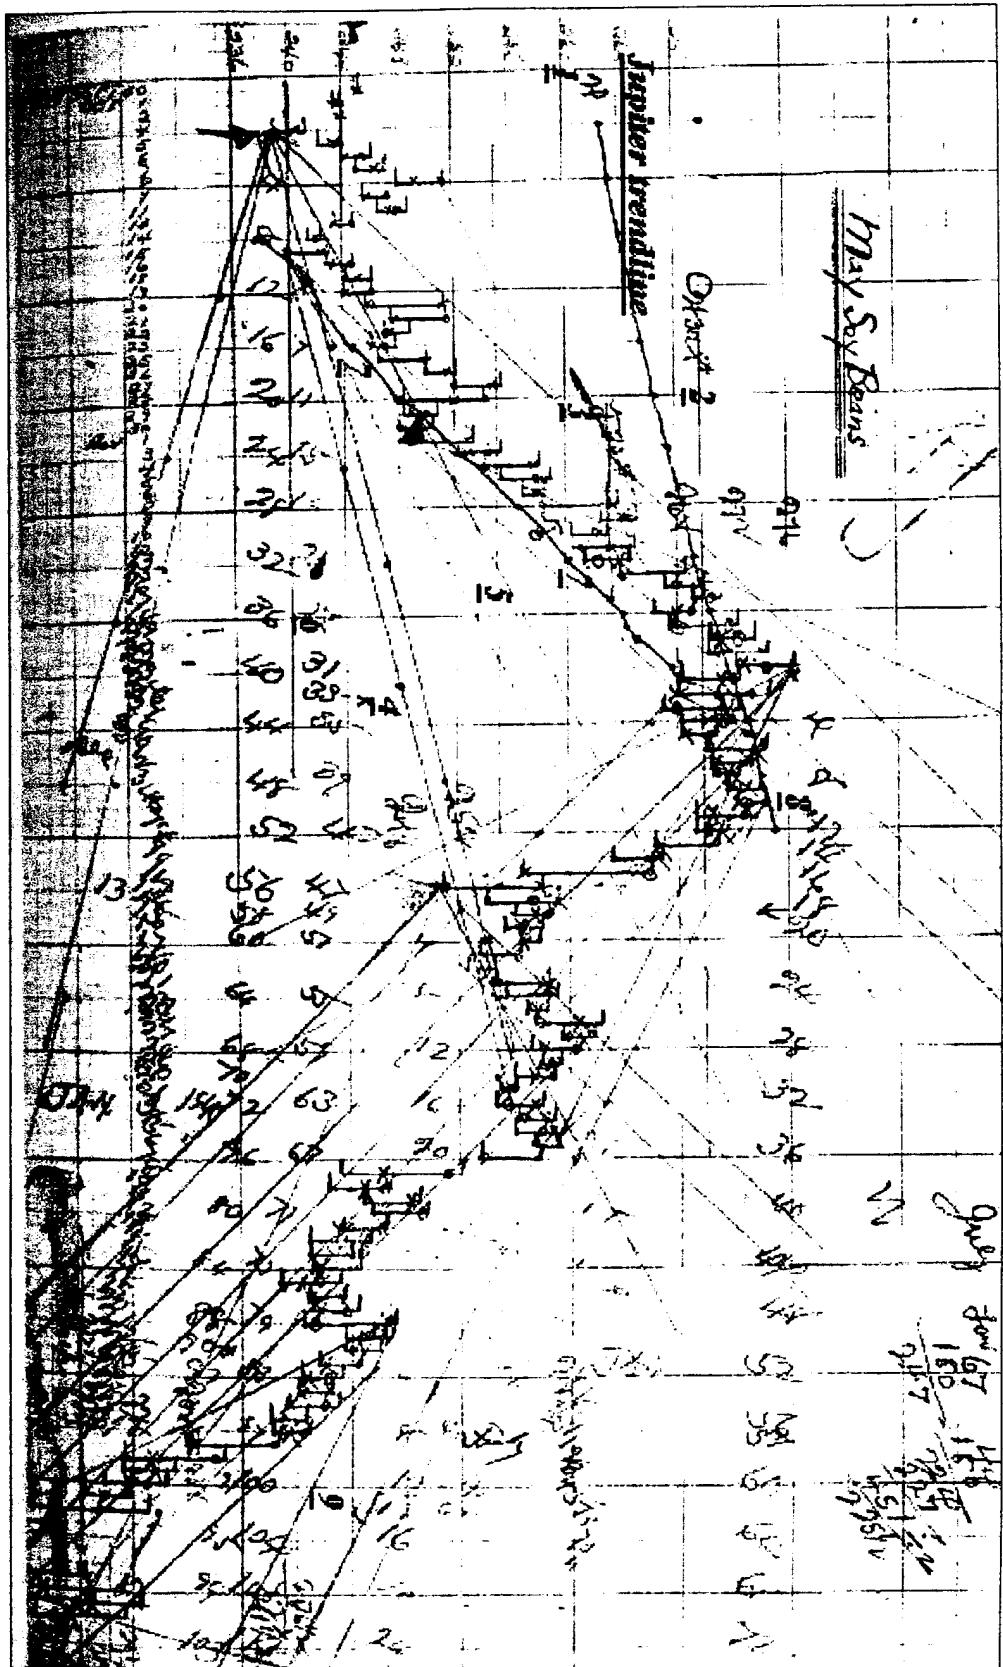

Top left is the astrological symbol for the planet Jupiter just at the beginning of a Jupiter trendline(1) He started this trendline on the 4th of October 1948 when Jupiter was at 22 degrees Sagittarius. 22 degrees Sagittarius is also 262 degrees of the 360 degree circle. Gann's first price marking was at 262 cents and then he started moving his trendline up by 1 cent every time Jupiter moved by 1 degree.

The next interesting chart marking (2) is a line drawn along at 270 cents marking the price/degree where Jupiter would change signs from Sagittarius to Capricorn. A planet changing signs of the zodiac is known as ingress and this chart shows several planets ingress but he only marked Jupiters in this way.(3) Uranus and then (4) Venus and Mars ingress within one day of each other. He put a little cross on the day of the Mars crossing.

Each zodiac sign is 30 degrees of the circle. (360 degrees divided by 12 signs = 30 degrees) Gann marked 270 price for Jupiters ingress and then marked 15 cents below this (5) as well 30 cents lower (6) all potential price targets.

Another interesting trendline is created by the movement of the planet Mars (7) Mars moves faster than Jupiter and this is reflected in the steeper slope of the Mars trendline. There are a few light markings that are hard to see in a reprint like this but one of them (9) is a little arrow pointing down when the moon's nodes changed to 29 degrees of a new sign. This is like a planetary ingress because the moon's nodes run counter clockwise.

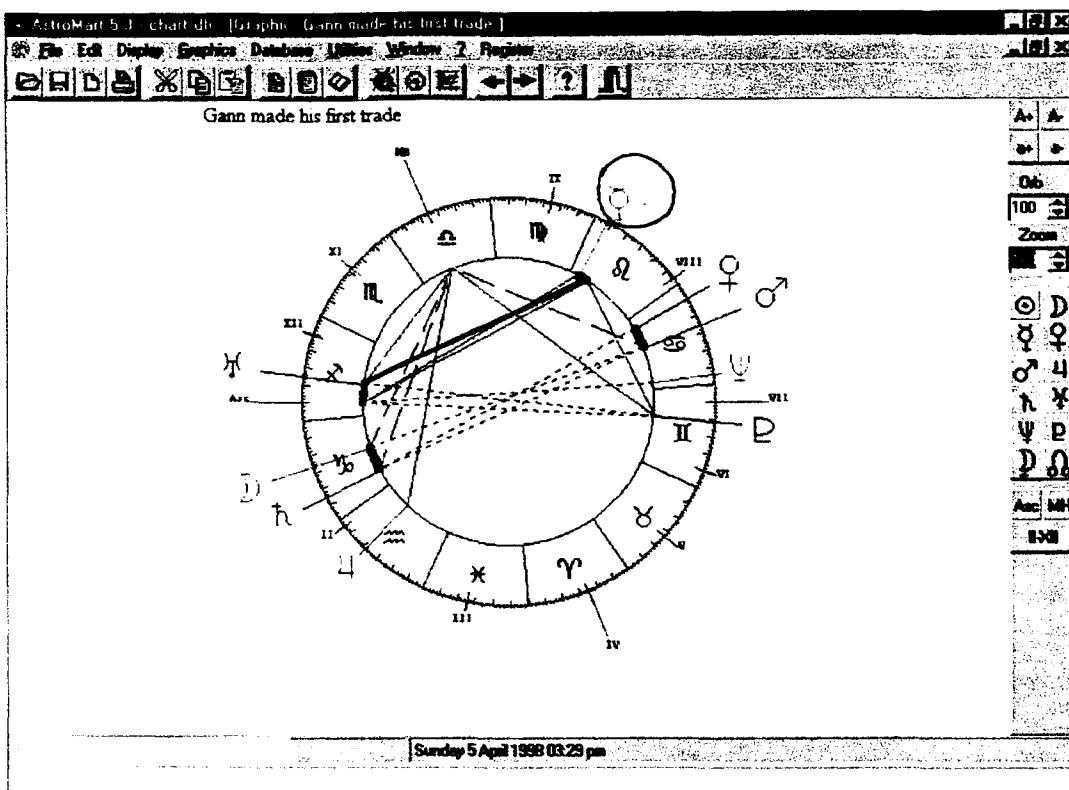

It is always fascinating to study this chart but planetary ingress was only a minor part of Gann's techniques, more important are the actual predictions that Gann made in his annual forecasts.

 Dimensions: 800 x 600 pixels

August 15th 1902 Gann makes his first trade.

Here are the first elements of the Gann formula.

- 1) A Trine.
- 2) A Conjunction involving the Trine.
- 3) Balanced aspects. That means the aspects aren't exact but each aspect is not exact by the same amount. In this case the Sun is trine Uranus with a 4\* separation the Sun is also Conjunct Mercury with a 4\* separation.

Name: 4.jpg  
 Dimensions: 1057 x 1389 pixels

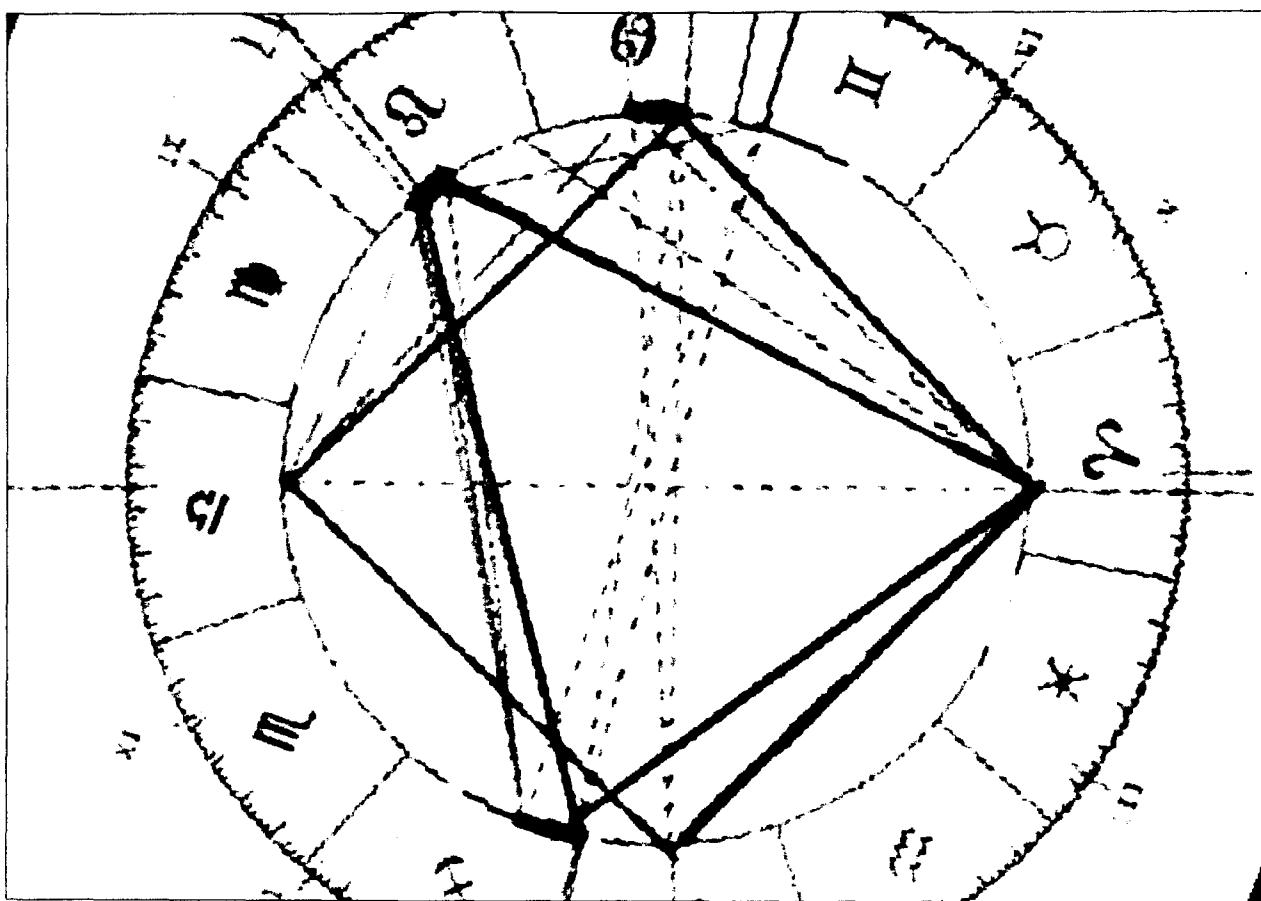

Name: 08 08 1908 chart.bmp  
 Dimensions: 800 x 600 pixels

Gann made one of his most important discoveries on August 8th 1908.

The clues Gann left are numerous but the most important are the triangle and the square. Have a look at the emblem for the Lambert Gann publishing company and compare this with the chart for August the 8th 1908.

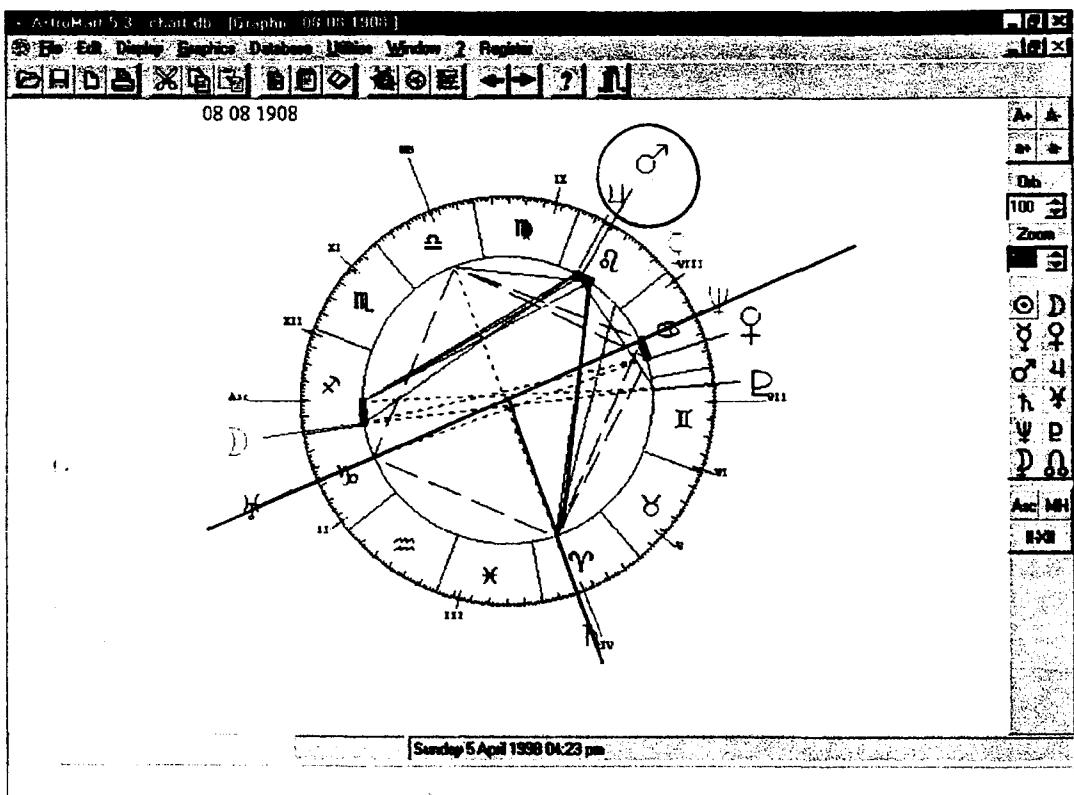

This is the date that W.D.Gann says that he made one of his greatest discoveries for predicting the trend of stocks and commodities. The similarities are obvious.

Name: 5.jpg

Saturn square Neptune  
Saturn square Uranus  
Venus opp. Neptune

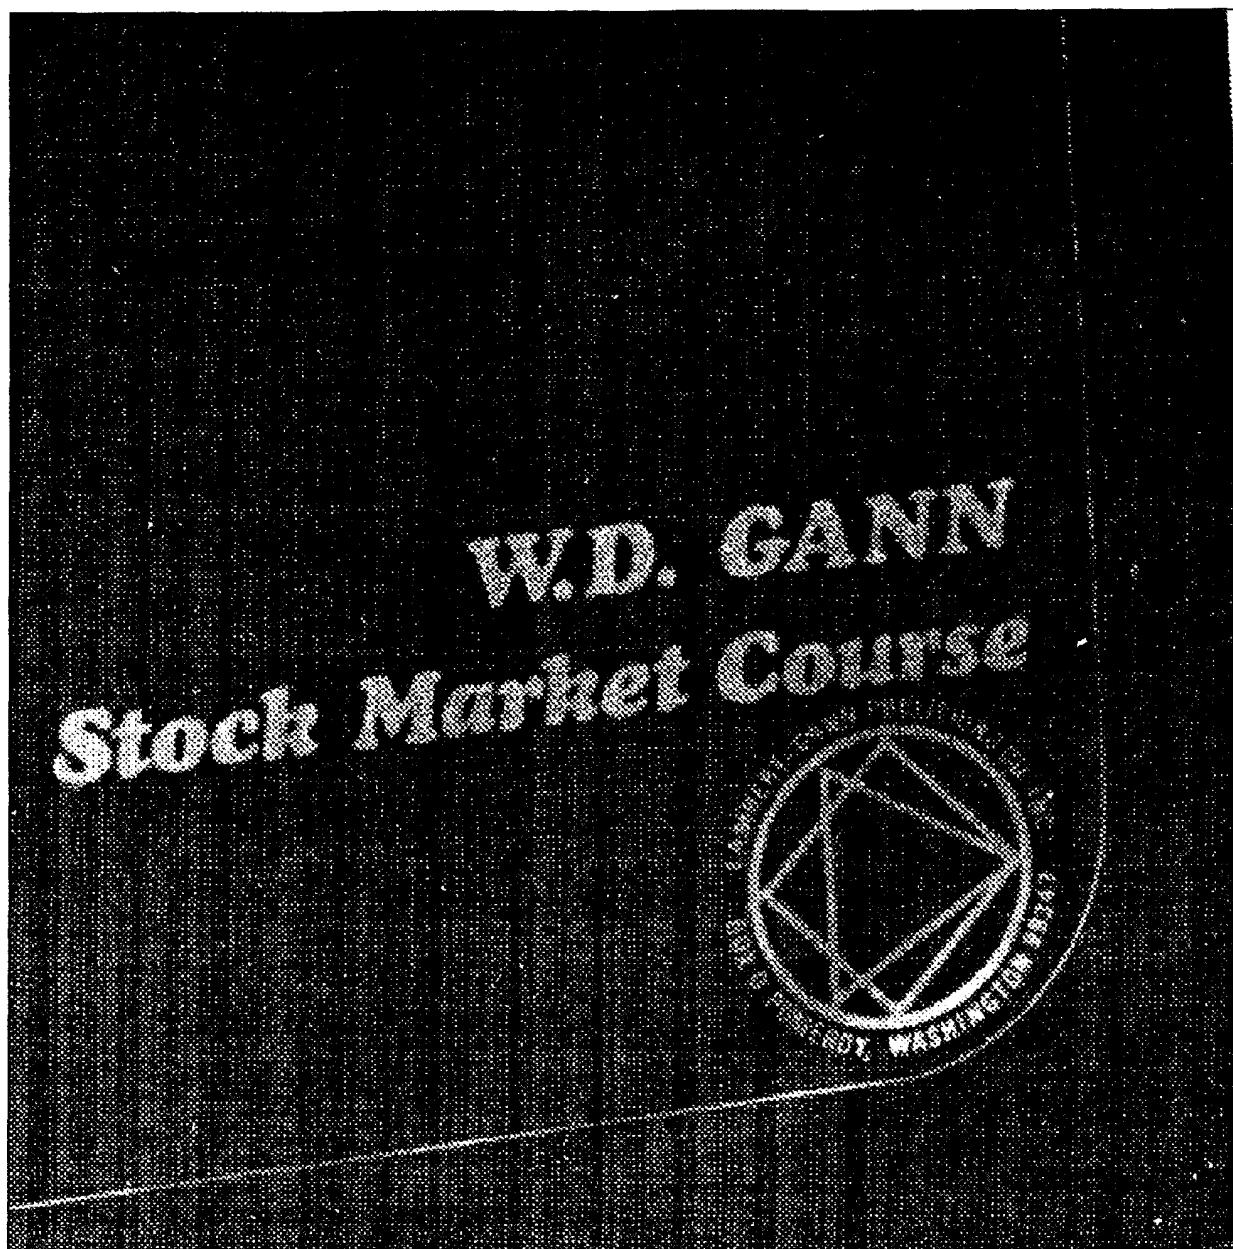

Another way and more usual way for us to look at the chart from 8th August is as a Tee Square between Saturn Neptune and Uranus and trine between Saturn and Mars/Jupiter/Sun.

Notice once again we have,

- 1) A Trine. (Saturn Trine Sun)
- 2) A Conjunction involving the Trine.
- 3) One Planet involved in both a trine and a square at the same time.
- 4) Balanced aspects. That means the aspects aren't exact but each aspect is not exact by the same amount. Saturn square Neptune 5\*. Saturn trine Sun 5\*.

Sun con Mars by 4\*  
Sun con Jupiter by 6\*

Dimensions: 1057 x 1389 pixels

Name: 7.jpg  
Dimensions: 883 x 904 pixels

....In order to substantiate Mr.Gann's claims as to what he has been able to do under this method we called upon Mr. William E. Gilley an Inspector of imports, 16 Beaver Street, New York. Mr.Gilley is well-known in the downtown district. He himself has studied stock market movements for twenty-five years during which time he has examined every piece of market literature that has been issued and procurable in Wall Street. It was he who encouraged Mr.Gann to study out the scientific and mathematical possibilities of the subject. When asked what had been the most impressive of Mr. Gann's work and predictions he replied as follows:

"Mr.Gann's calculations are based on natural law. I have followed his work closely for years. I know that he has a firm grasp of the basic principles which govern stock market movements, and I do not believe any other man on earth can duplicate the idea or his method at the present time.

"Early this year he figures that the top of the advance would fall on a certain day in August and calculated the prices at which the Dow-Jones averages would then stand. The market culminated on the exact day and within four-tenths of one percent of the figures predicted."

You and Mr.Gann must have cleaned up considerable money on all these operations was suggested.

"Yes, we have made a great deal of money. He has taken half a million dollars out of the market in the past few years. I once saw him take \$130 and in less than one month run it up to over \$12,000. He can compound money faster than any man I ever met."

So much for what Mr.Gann has said and done as evidenced by himself and others. Now as to what demonstrations have taken place before our representative:

During the month of October, 1909, in twenty-five market days, Mr. Gann made, in the presence of our representative two hundred and eighty-six transactions in various stocks on both the long and short side of the market. Two hundred and sixty-four of these transactions resulted in profits; twenty-two in losses.

The capital with he operated was doubled ten times so that at the end of the month he has one thousand per cent on his original margin.

In our presence Mr.Gann sold Steel common short at 94-7/8 saying that it would not go to 95. It did not.

On a drive which occurred during the week ending October 29 Mr.Gann bought Steel common at 86 1/4 saying that it would not go to 86. The lowest it sold was 86-1/8.

We have seen him give in one day sixteen successive orders in the same stock eight of which turned out to be at either the top or the bottom eight of that particular swing. The above we can positively verify.

Such performances as these coupled with the foregoing are probably unparalleled in the history of the Street.

Over the following pages you will learn how Gann made his predictions.

## Wheat September 30th 1909.

This is probably one of Gann's most famous and most puzzling trades because it is mentioned in *The Ticker* interview and no-one has been able to rationally solve it until now.

"One of the most astonishing calculations made by Mr. Gann was during last summer (1909) when he predicted that September wheat would sell at \$1.20. This meant that it must touch that figure before the end of the month of September. At twelve o'clock Chicago time, on September 30th (the last day) the option was selling below \$1.08, and it looked as though his prediction would not be fulfilled. Mr. Gann said "If it does not touch \$1.20 by the close of the market it will prove that there is something wrong with my whole method of calculation. I do not care what the price is now, it must go there." It is common history that September wheat surprised the whole country by selling at \$1.20 and no higher in the very last hour of the trading closing at that figure."

Of all the aspects here the only one that we are interested in first is the trine.(Venus trine Neptune) and from the trine conjunctions,squares or oppositions that can be linked to the trine,(Neptune square Saturn conjunct Moon and opposite Uranus.

So here we have a powerful Tee square that is activated by the faster moving planet Venus which is creating a trine to both a square and an opposition.

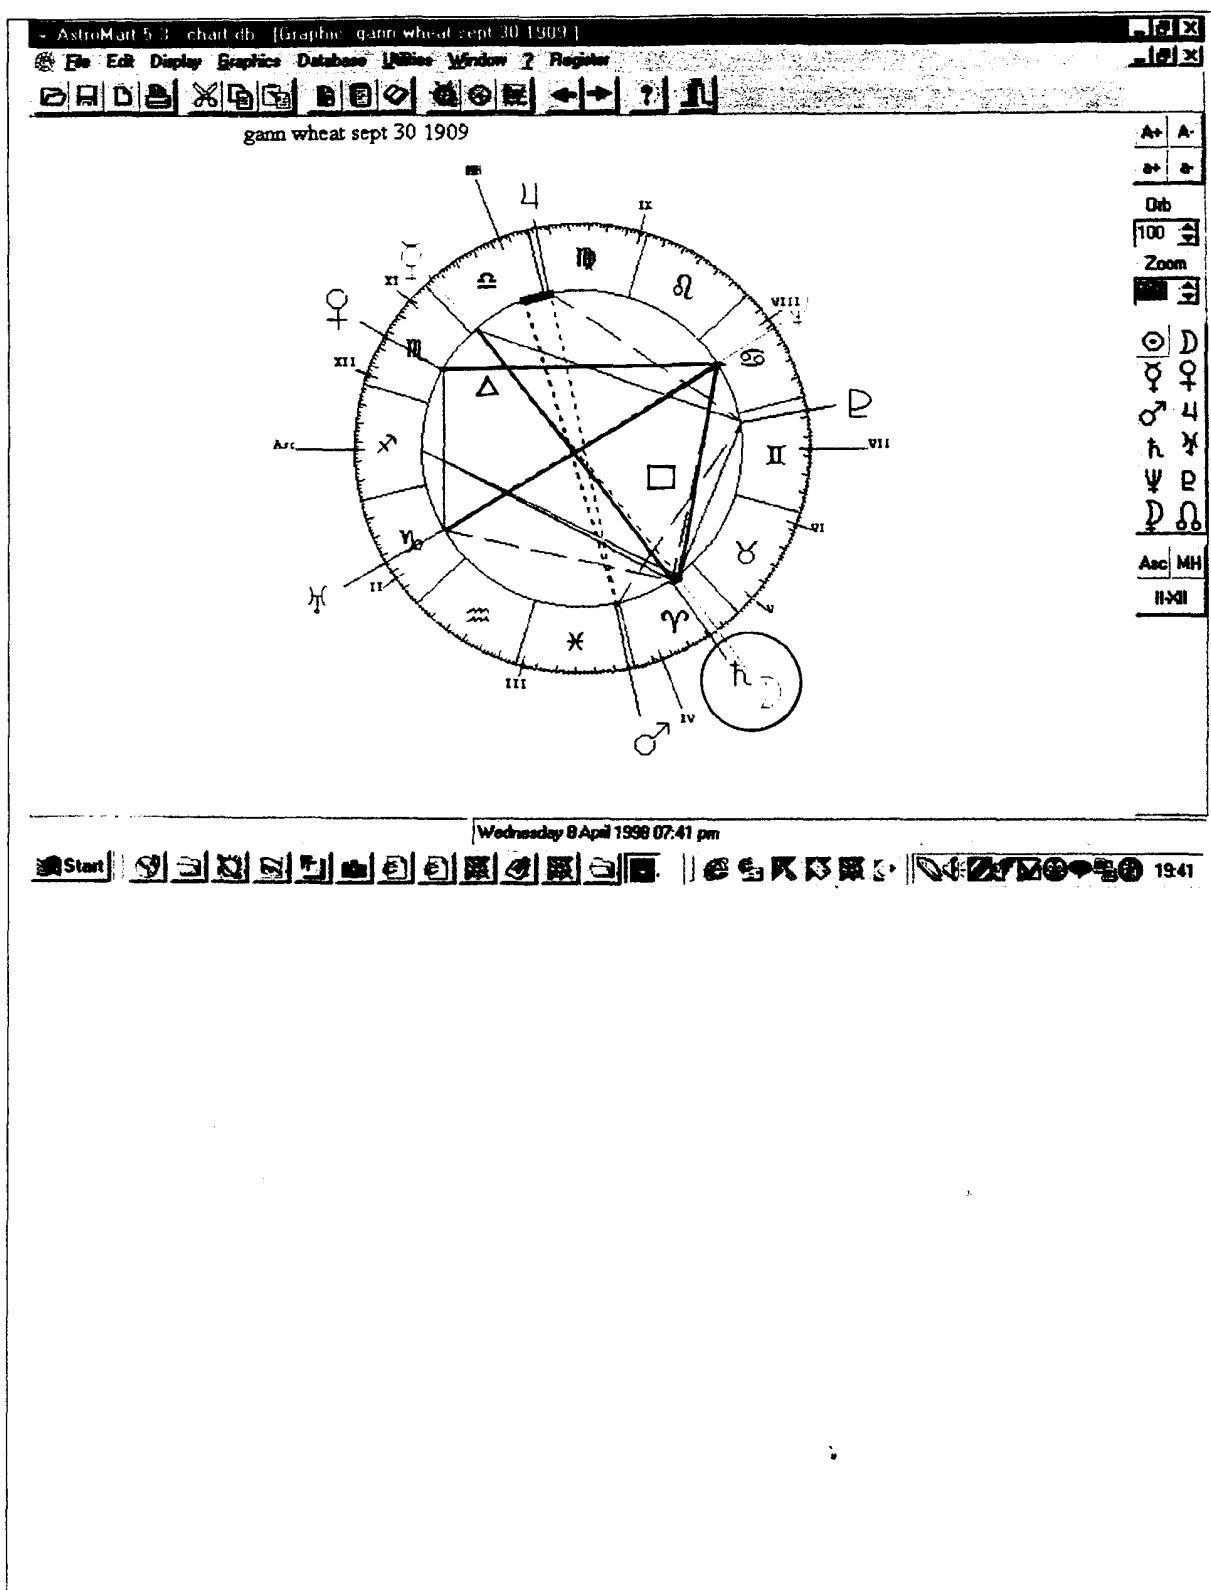

The trine is always the first aspect to look for as you will learn from the other proofs in this book for the trine is the triangle or the one third of a circle that Gann often mentions.

Later you will learn in detail about price targets on the hexagon chart but the last low on September wheat was 96.5 which is a straight line target to 120(360\*) and \$1.20 was Gann's forecast price for this day when powerful astro aspects were at work.

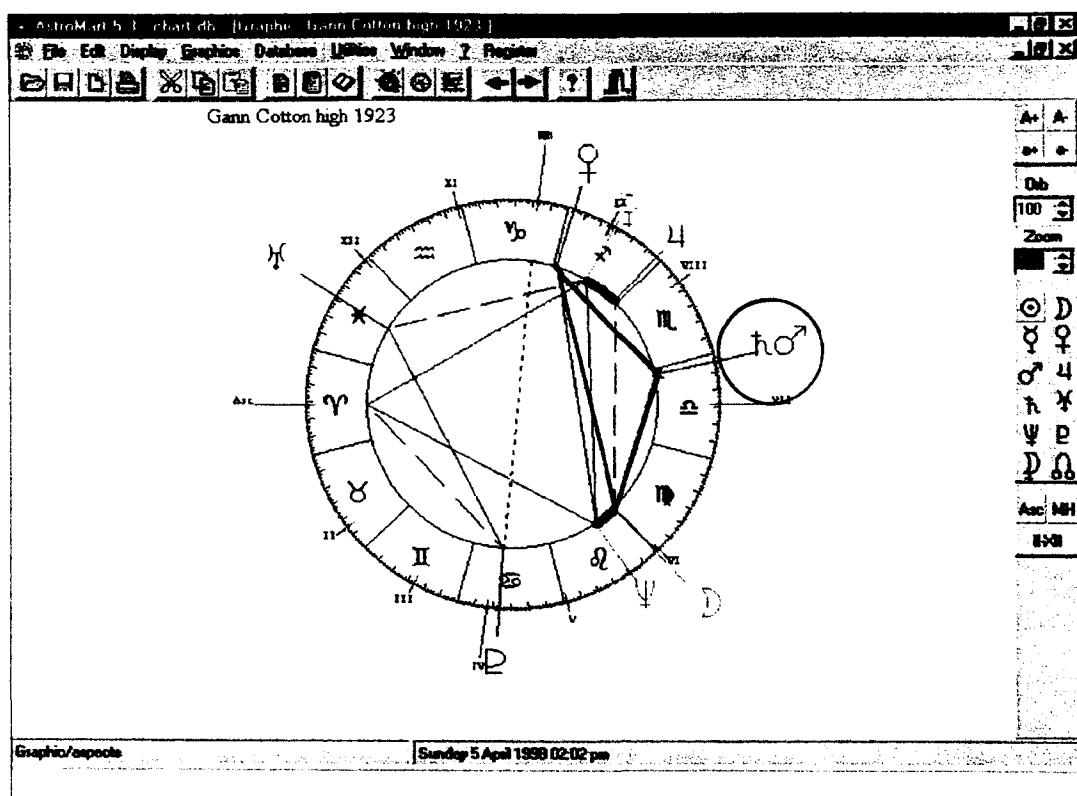

The hexagram is the symbol of the planets in occult literature and is the most important Gann tool for forecasting prices.

Saturn square Neptune

Uranus opposite Neptune

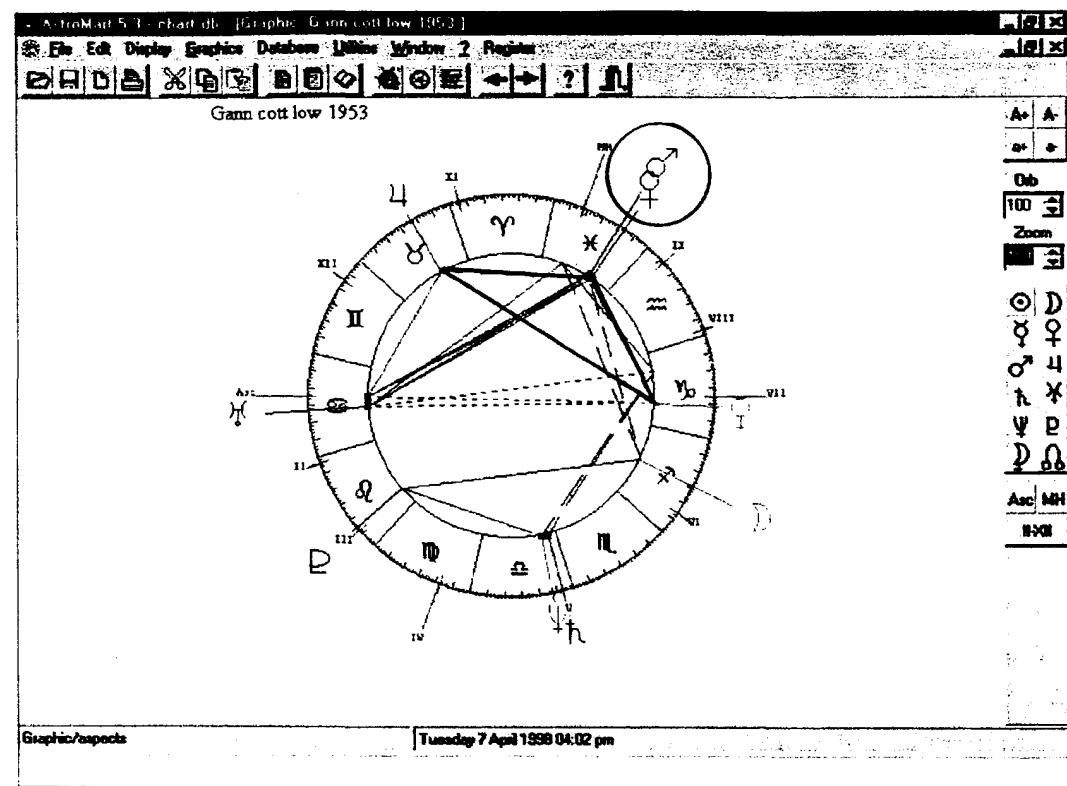

Name: 11.jpg  
Dimensions: 1057 x 1404 pixels

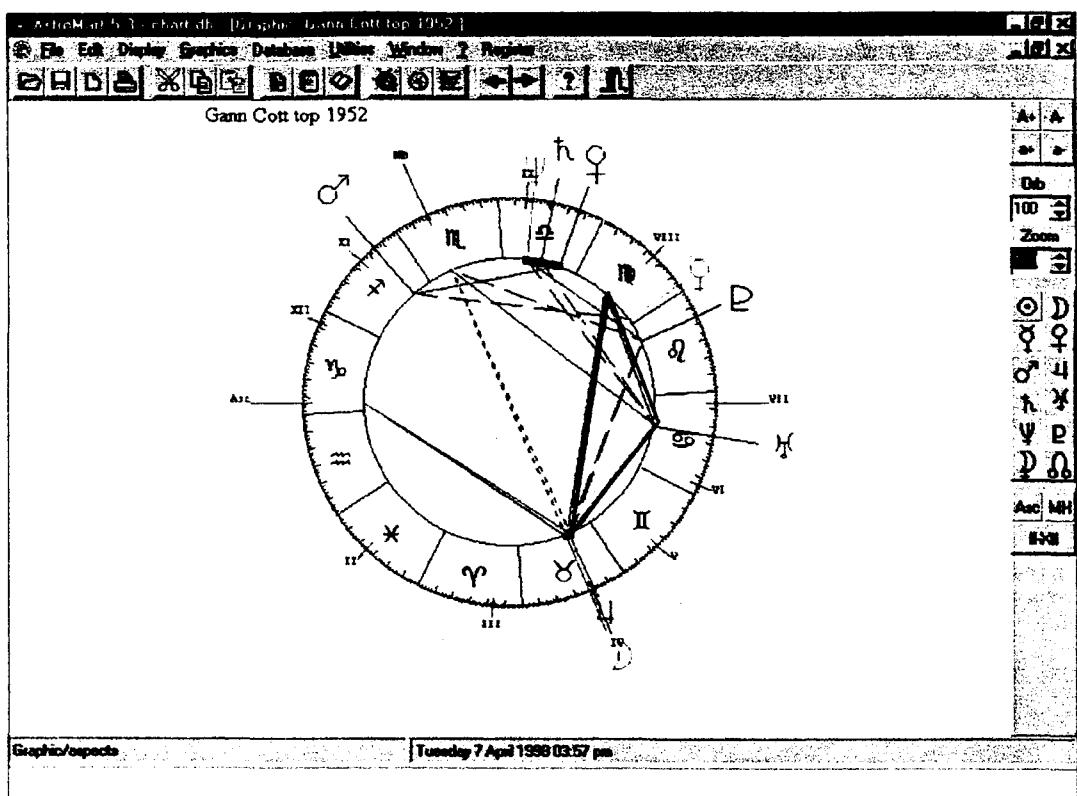

As you look at the planetary positions when cotton made various highs and lows you have to do a double take they look so similar. The first chart is of a cotton high on 30th November 1923 Mercury was trine Neptune with a conjunction of Mars/Saturn at the midpoint. The next chart is a cotton low in 1953 Jupiter is trine Mercury with a conjunction of Mars/Venus at the midpoint.

Name: 12.jpg  
Dimensions: 1057 x 1389 pixels

Name: Gann cott low 1953 chart.bmp

Name: 13.jpg  
 Dimensions: 1057 x 1389 pixels

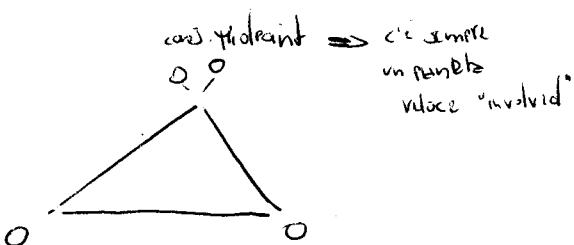

Name: Gann cott top 1952 chart.bmp  
 Dimensions: 800 x 600 pixels

### Cotton top in 1952 and the low in 1953.

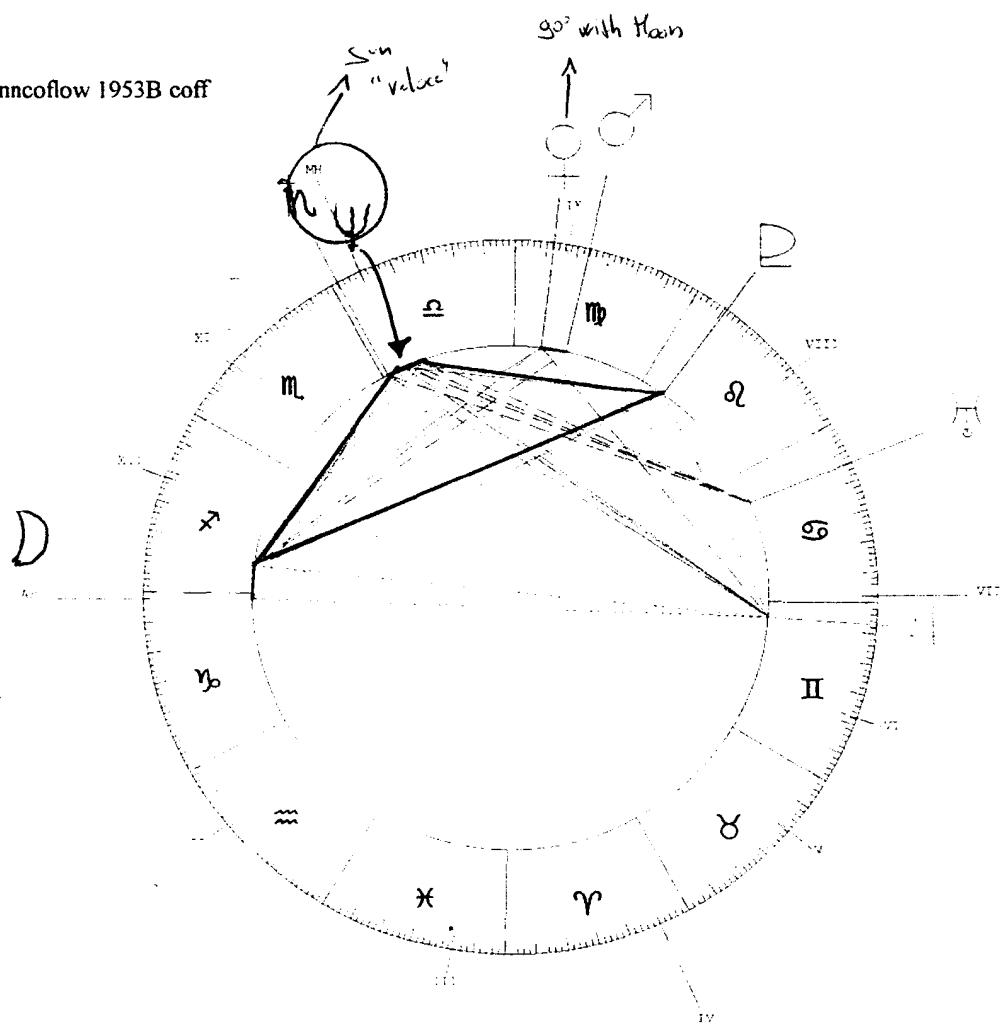

By now you will be able to see the basic pattern of aspects involving the trine. One or more of the planets that are involved in the first part of the move (in this case the high) will also be involved in the low.

When Cotton made its high on September 8 1952 the trine was Jupiter/Sun with Jupiter conjunct Moon. At the low on January 12 1953 Jupiter was trine Mercury with a conjunction of Venus and Mars at the midpoint.

Name: 14.jpg  
 Dimensions: 1057 x 1389 pixels

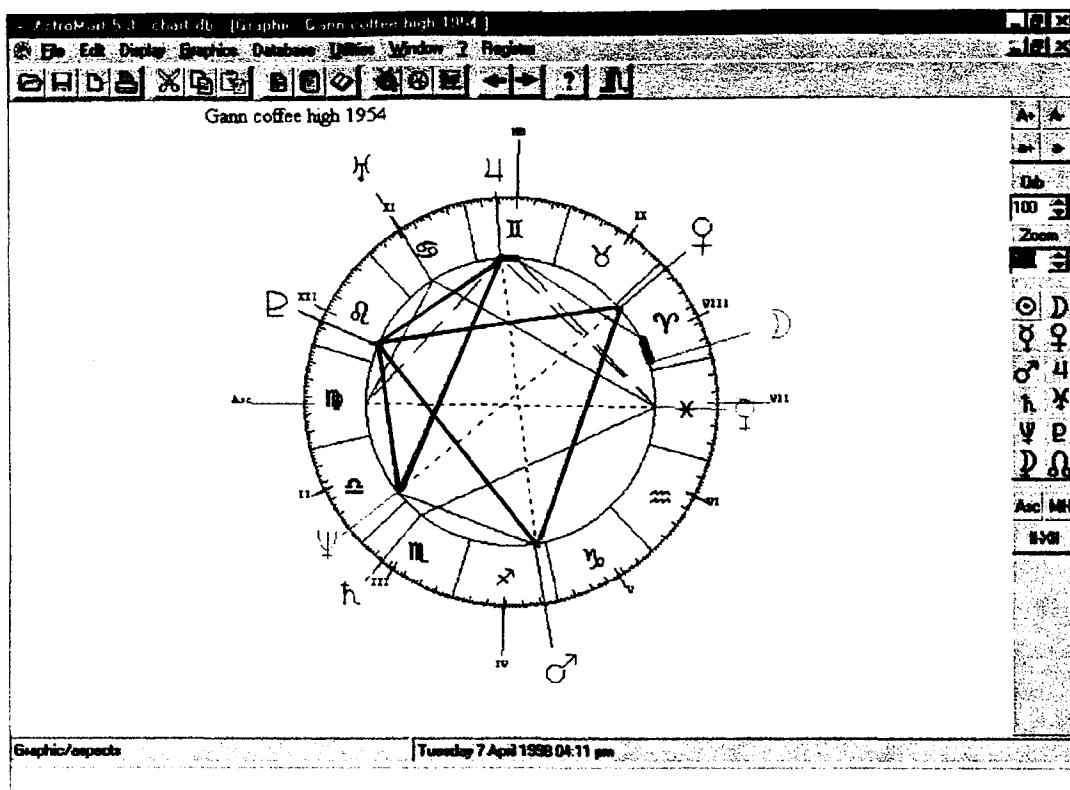

Ganncoflow 1953B coff

#### Comparison of the Coffee low in 1953 and the high in 1954.

As usual look for the trine at the first point, the low in 1953. In this case Moon trine Pluto. At the midpoint is a Sun conjunct Neptune 3\*. Neptune is exactly at the midpoint of the trine and the moon is also making an exact square with Venus so we have again the triangle and the square. Pluto is the major planet in the trine. Notice that the high on 2 April 1954 once again involved Pluto but in a grand trine of Pluto/Mars/Venus. At the high Pluto is also in perfect balance at the midpoint of a Jupiter/Neptune trine.

Name: soy low oct 17 1941 chart.bmp  
Dimensions: 800 x 600 pixels

## Soybeans low October 17th 1941.

Gann mentions this date as the low but doesn't say he bought it either though he did sell the high on September 14th. This day was a Friday and there were three trines that were all balanced by 2\*. They were Venus /Pluto, Sun/Jupiter Plus a trine with a conjunction on the end Neptune-trine Saturn /Uranus. Saturn and Uranus are slow moving planets and a separation of 2\* is a lot but the other faster moving aspects are balanced. In this case the moon would be the perfect trigger and would have been conjunct Neptune on the Saturday to make a trine with a conjunction at each end. Was Gann waiting for this before buying because the markets did trade on Saturday at that time?

This is a trigger EVER?

Name: 18.jpg

### Soybeans sold November 14th 1941.

This is a lunar return of sorts. The earth goes 360° around the Sun and it is called an anniversary date. In this example the Moon is back in the same position compared to Neptune as it was the month before when the low was made. Now in this whole sequence of trades don't forget that Neptune is the key planet and the fast moving planets act as a trigger to the slower moving aspects.

### Cotton high November 30th 1923.

This is the trade where Gann took an account that he opened on the day of the high with \$973 and turned it into \$30,000 by the time he closed the account on January 28th 1924. Lets look at why he sold the high and closed the account when he did.

The price high was 2 points from the target created by the hexagram midpoint.(target 367 actual high 365)

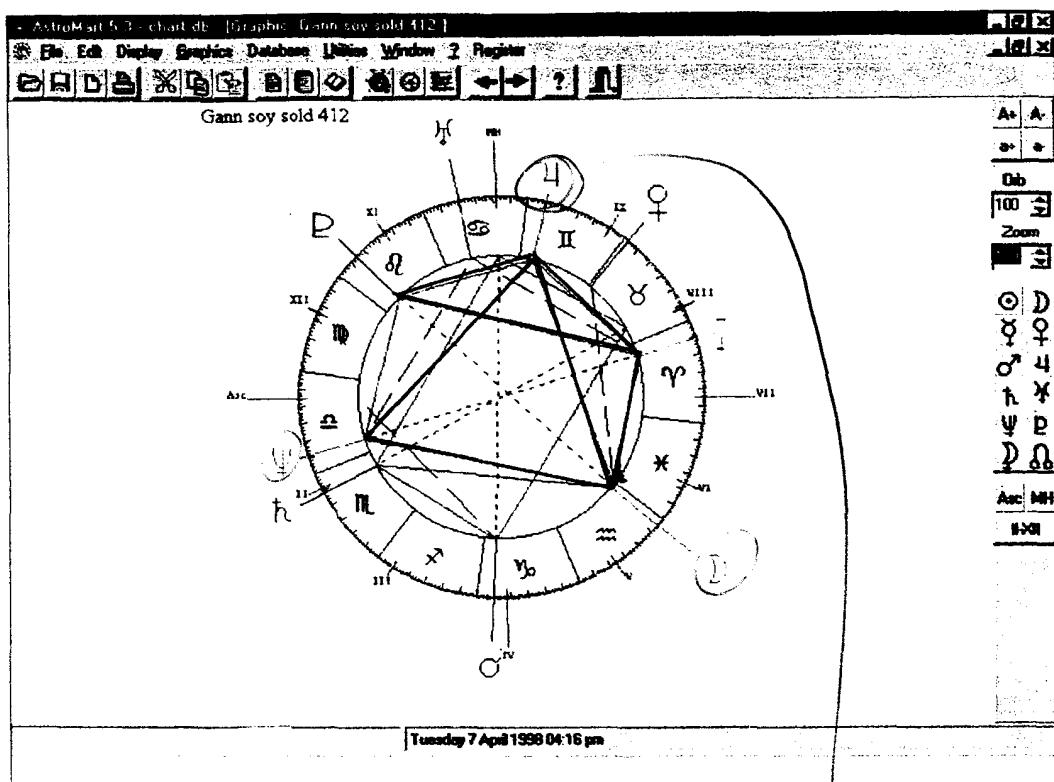

Here is the astrology of the high. Venus trine Neptune with a conjunction of Saturn/Mars at the midpoint.(part Hexagram) Saturn and Mars are 2 points from the high using the hexagon chart. The day he closed the account Venus again featured as part of a trine, this time a grand trine Venus conjunct Uranus trine Pluto and Saturn conjunct Moon.

# THE MORNING TELEGRAPH

SUNDAY, DECEMBER 17, 1922

## GANN FORETOLD RUN OF STOCKS

Wall street Scientist Forecasted Top of Bull Market Year in Advance.

**HIS INDICATIONS UNCANNY**

By ARTHUR ANGY (financial Editor, The North Side Nesw)

W.D.Gann has scored another astounding hit in his 1922 stock forecast issued in December 1921. That forecast called for first top of the bull wave in April, second top in August, and the final top and culmination of the bull market October 8 to 15, and strange as it may seem, the average prices of twenty industrial stocks reached the highest point on October 14 and declined 10 points in thirty days after that date.

Mr.Gann predicted a big decline for the month of November. He said in the 1922 forecast: "November 10-14 panicky break." During this period stocks suffered a severe decline, many falling 10 points or more in four days and on November 14 lowest average prices were made with 1,500,000 shares traded in on the New York Stock Exchange.

I found his 1921 forecast so remarkable that I secured a copy of his 1922 stocks forecast in order to prove his claims for myself. And now, at the closing of the current year of 1922, it is but justice to say I am more than amazed by the result of Mr. Gann's remarkable predictions based on pure science and mathematical calculations.

The North Side News stands for a clean Wall Street and has rendered a great public service in helping to rid Wall Street of the bucket shop evil by publishing a series of articles in conjunction with the Magazine of Wall Street. We believe in branding a fake, and we believe in giving credit where due.

## GANN NO TIPSTER

Mr. Gann is no "Wall Street tipster." sending out market letters and so-called "inside information." Mr. Gann's results are obtained by profound study of supply and demand, a mathematical chart of money, business and commodities. He determines when certain cycles are due, and the order and the time when market movements will follow.

During the past thirty years many men have proclaimed discoveries and theories to "beat the Wall Street game ." most of which resulted in loss to their followers. They could always tell by the chart just why the market did it after it happened. Mr.Gann's theory differs from the others in that he tells months in advance what stocks are going to do.

His forecast stated that some stocks would make high this year in April, some in August and others in October- the months when he predicted the bull movement would culminate. Of a list of a hundred stocks; thirty made highest prices in April and many declined, while others continued higher; twenty made high during August, and fifty made high of the year in October, from which the largest decline of the year has taken place.

His 1922 forecast indicated final tops on railroad stocks for August 14. The Dow Jones's averages on rail made high August 21 and reached the same average levels on September 11 and October 16, but did not exceed the high made in August, which was made seven days later than the exact date called for in the forecast.

### HIS CHART A FACT

Such accurate long range forecasting as Mr.Gann is doing sounds almost unbelievable, and how he does it I do not know, but the writer does know that he does it. My attention was first called to his 1921 forecast in which he predicted that stocks would be bottom in August, 1921, and advance to December, 1921. They did so. His chart or graph of the market one year in advance is a fact, and that the course of the stock market follows it astoundingly close is equally a fact.

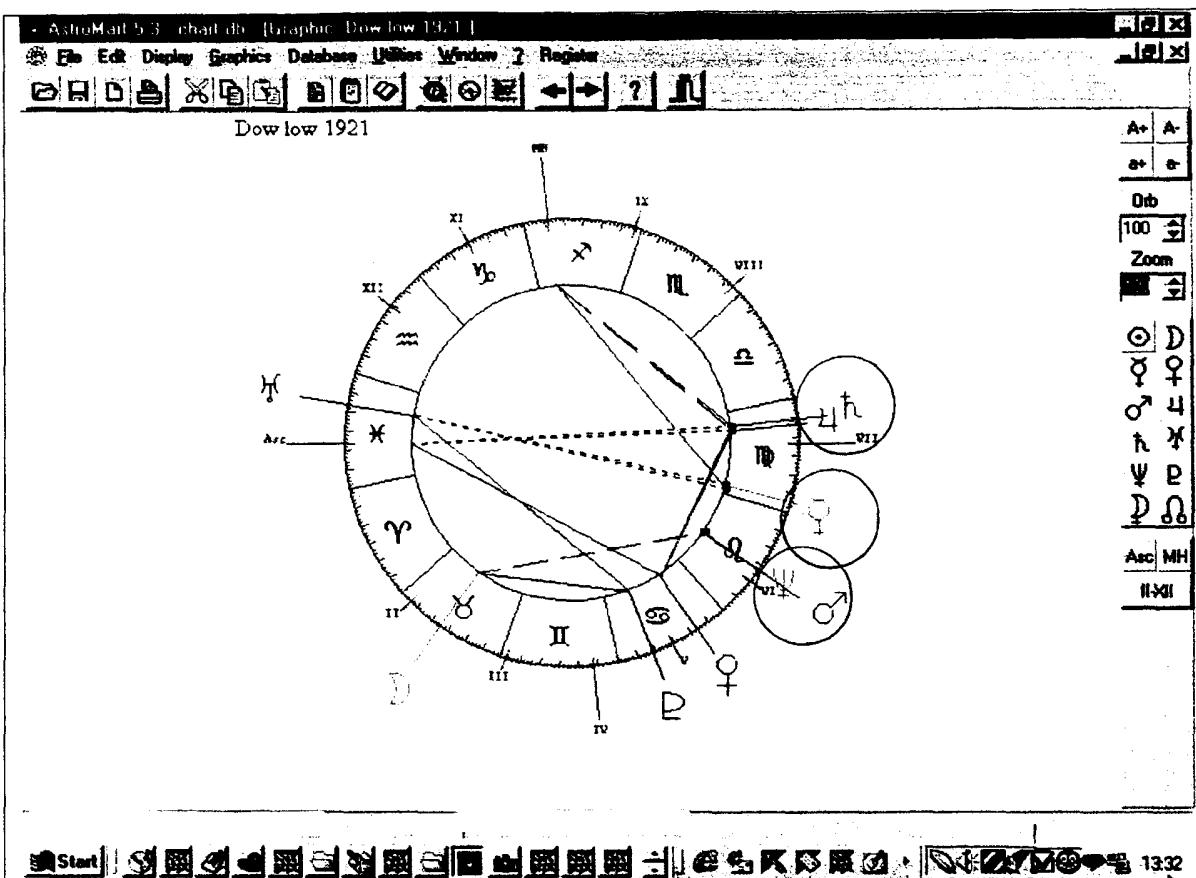

Mr.Gann says the trouble with most chart makers is that they work with only one factor-space movements or charts that record one to two points up or down-whereas there are three or more factors to be considered, space, volume and time. The most vital is time, and back of that is the cause of recurrence of high or low prices a certain intervals.

I asked Mr.Gann: "What is the cause behind the time factor?"

He smiled and said: "It has taken me twenty years of exhaustive study to learn the cause that produces effects according to time. That is my secret and too valuable to be spread broadcast. Besides, the public is not yet ready for it."

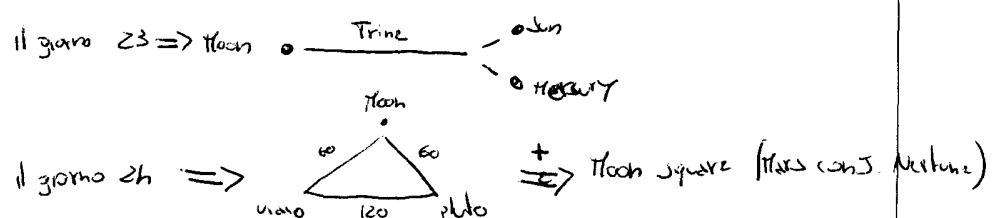

"Water seeks its level."continued Mr.Gann. "You can force it higher with a pump, but when you stop pumping it requires no force to cause it to return to its former level. Stocks are the same. They can be forced above their natural level of values to where lambs lose all fear, become charged with hope and buy at the top. Then stocks are permitted to sink to a level where hope gives way to despair and the most rampant bull becomes a bear and sells out with a loss. My discovery of the time factor enables me to tell in advance when these extremes must, by the law of supply and demand, occur in stocks and commodities."

IMPORTANTE!

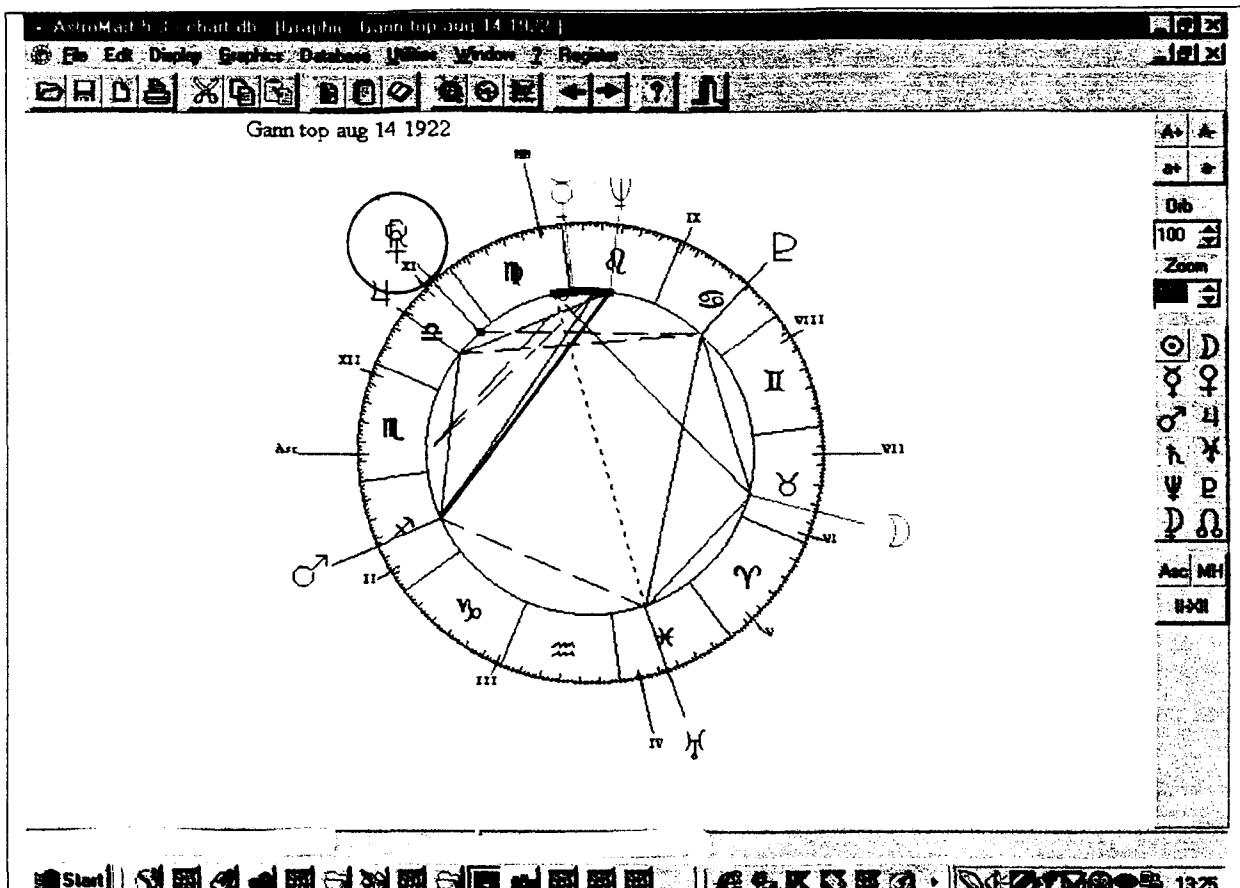

Low August 24th 1921.

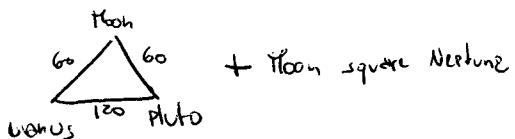

Gann predicted the stock market low on August 24th 1921. Saturn conjunct Jupiter 1\*. Saturn/Jupiter cycles are always important in the big picture but here are the aspects that fine tuned the turn. The Moon creates the trine aspect to Sun conjunct Mercury 1.47\* and square Mars conjunct Neptune (exact) On the same day Jupiter is conjunct Saturn 1.46\*(Balanced). The fact that there were 3 conjunctions at the same time would be an important factor in this turning point.

STELLUM

### Top October 8-15th 1922.

The actual date of the high was October 14th.

The main factors in this turn were the grouping of conjunctions near the Sun that was also square Mars.

The short term timer was the Moon trine Venus and within this trine was

Sun conjunct Mercury 1\*

L > 14 Oct 1922

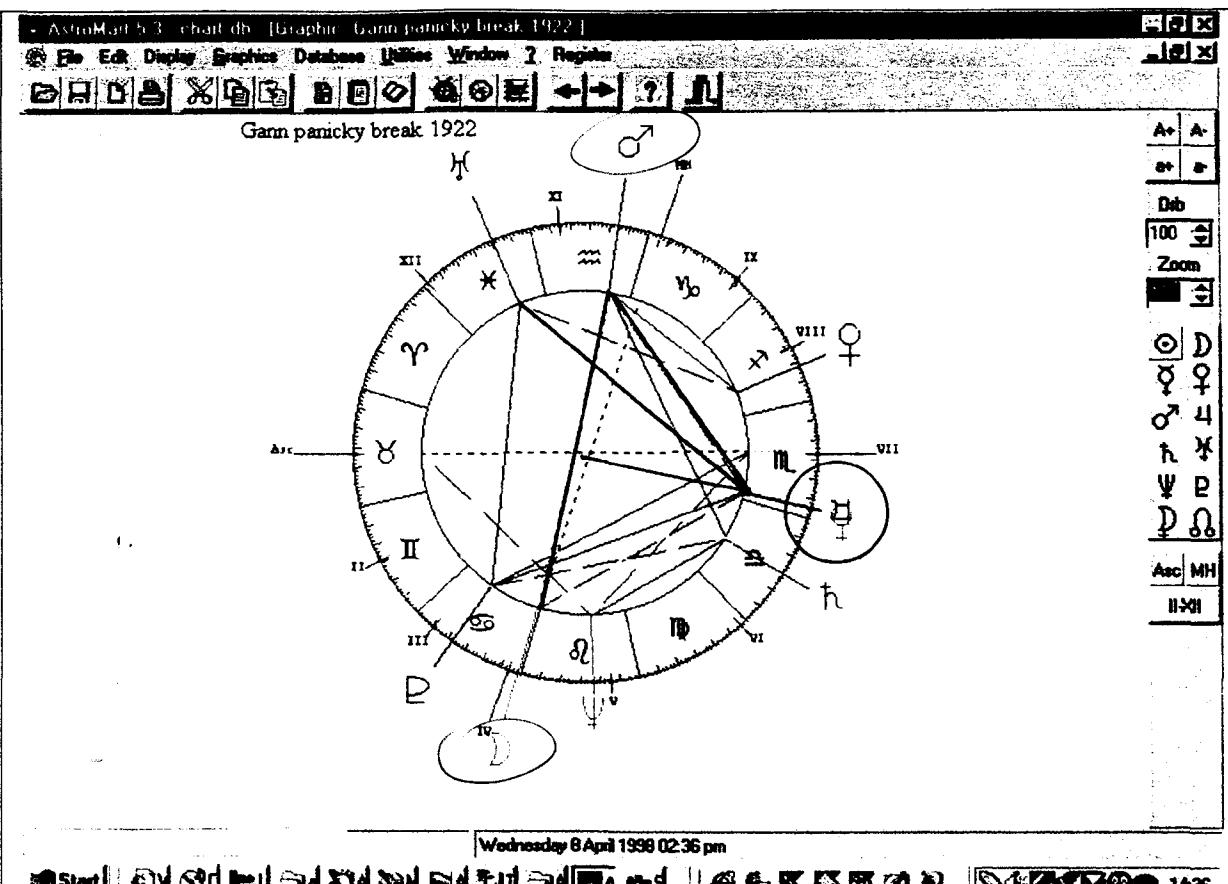

Sun square Mars 1\*

Gann said there was always some sort of relationship between a top and bottom and this is why the trine and the square are so important as starting points.

At the low in August 1921 the trine was Moon to conjunct Sun/Mercury and the square was Moon to Mars. At this high the very same planets are involved.

Another very common relationship is to look at the aspect wheel at a high or low and find the next major planet (anticlockwise) that is not involved in the present aspects and you will find that this planet will be a feature of the next high or low.

### **Low July 8th 1932.**

The March 8th high involved the Sun/Pluto trine at the July 8th low Pluto was conjunct the Sun (5° separation) on July 8th the trines were Jupiter/Uranus exact. The square was Uranus/Pluto 1°. Pluto was trine the node 1°.

Name: 45.jpg  
Dimensions: 1057 x 1389 pixels

Name: gann top sept 1932 chart.bmp  
 Dimensions: 800 x 600 pixels

### High September 20-21st 1932.

The predicted high was for the 20th or 21st of September and the 23rd turned out to be the secondary high meaning Gann missed the actual high but did manage to sell the bounce. As always we look for the trine. In this case Sun trine Saturn 0° Saturn opp Mars 2° this is similar to the July 20th high 1998 (see hexagon chart and Planetary activity chapter) Sun trine Jupiter and Jupiter square Mars.

### High July 17th 1933.

This was a Monday and he predicted a fast break into the 21st of July. On the Saturday the Sun was conjunct Pluto 0° of orb. On the 17th the Moon formed a trine with Mars. There would not be any other trines in this week. Between this trine were two conjunctions Sun/Pluto 1° and Mercury/Venus 4°.

Jupiter was also in the same position due to retrograde/direct motion as it was at the low on March 1st. (see the Strange Clocks chapter).

It is interesting to note that Mercury also went retrograde at 13° Leo on this day and that on the 16th of October 1987 Mercury went retrograde at 13° Scorpio just before the crash day.

The hexagon chart.

Price and planetary activity at the same point

The hexagram in Occult tradition is the symbol of the planets. Ganns hexagon chart is also one of the most important for getting planetary price targets.

You will notice on Ganns may soybean chart how fast the Mars trendline is when converted straight from longitude degree to price. The hexagon is used to slow the trend line down. This is done by using the numbers on the hexagon chart as they relate to price eg the numbers on the chart 90 to 91 are covered by the degrees 0 through to 7

It is always important when working on price targets to check the hexagon chart as well as just doing straight longitude conversion.

Here are two examples on the S+P where turns triggered by planetary aspects were related by price on the hexagon chart.

At the major S+P low of 444 Jupiter/Pluto were also conjunct at a price of 444 (28° Scorpio) on the hexagon chart. Jupiter/Pluto were (0° of orb) on November 25th 1994.

The low of 444 was made on November 23rd (two days earlier)

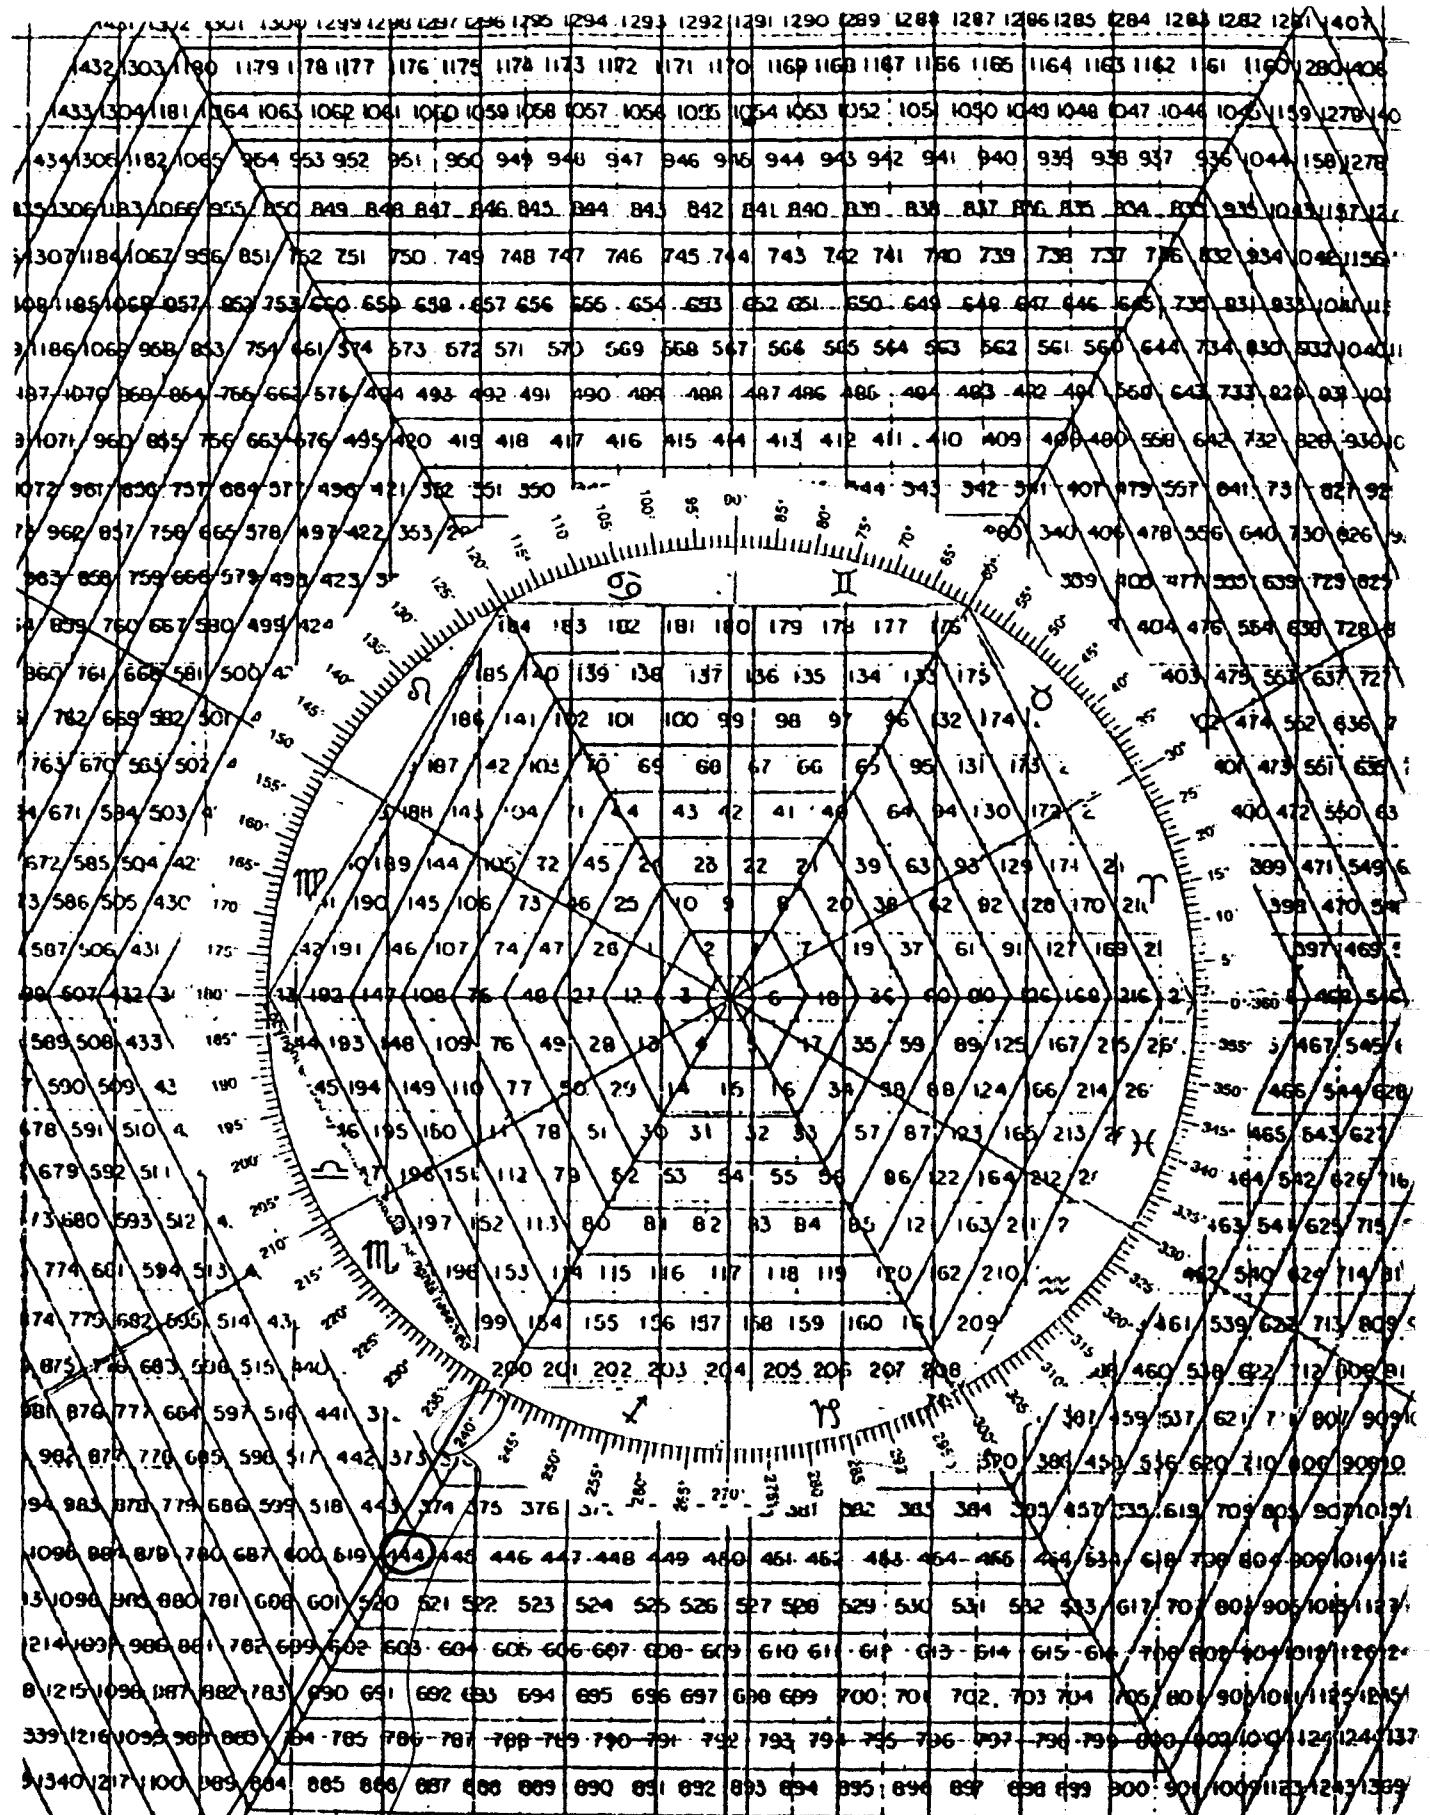

The October 1997 high of 992 was made when Pluto/Mars were conjunct. The actual high was 3 days later when price reached the same degree where Pluto/Mars were conjunct. Prices then fell to low of 844 on the 28th October in a move that was described later as a mini crash.

The next major top on 20th July 1998 involved Jupiter.

Jupiter was 180° from 1199 on the hexagon chart when it formed a Sun/Jupiter trine and Mars/Jupiter square. 1199 was the futures high and led to a price low of 929 on October 8th as Mars made an exact trine with Saturn.

Saturn was 927 on the hexagon chart.

To the Venus Square Jupiter

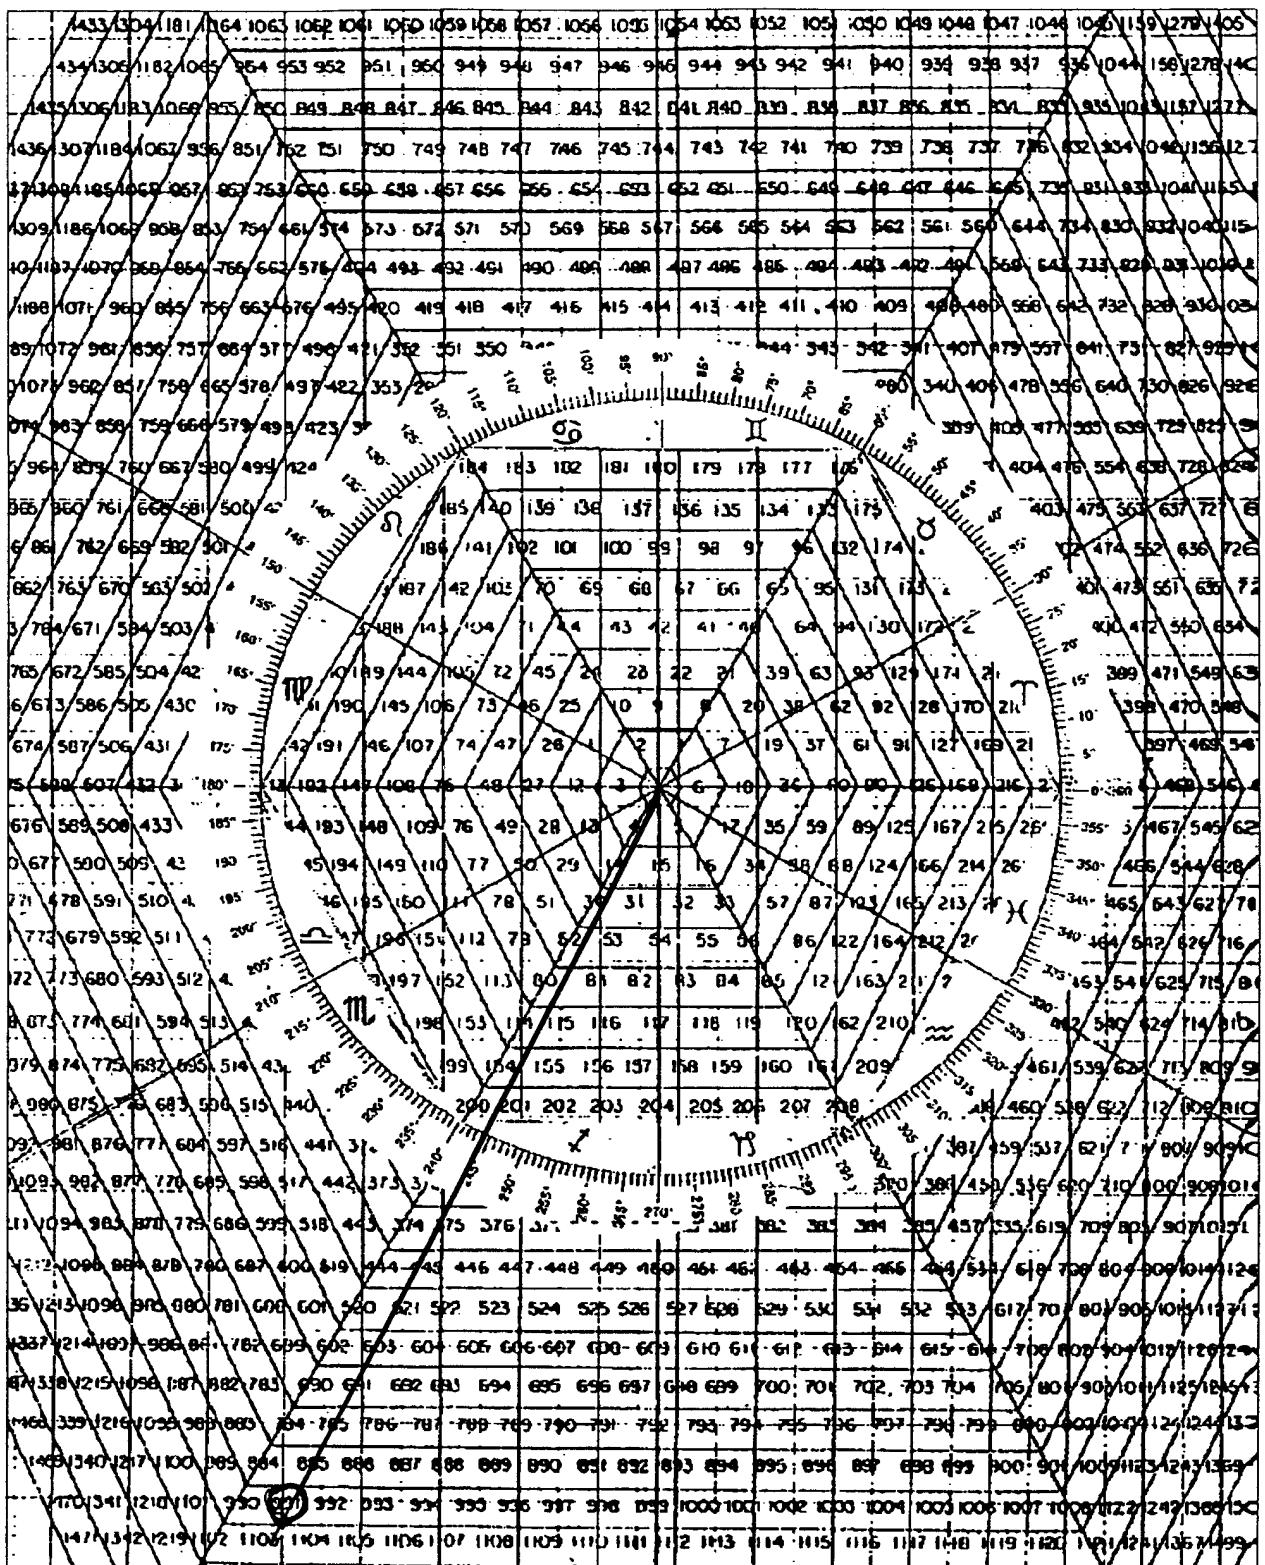

Jupiter conjunct Pluto at major S+P low of 444.

Mars conjunct Pluto at high of 992 October 1997.

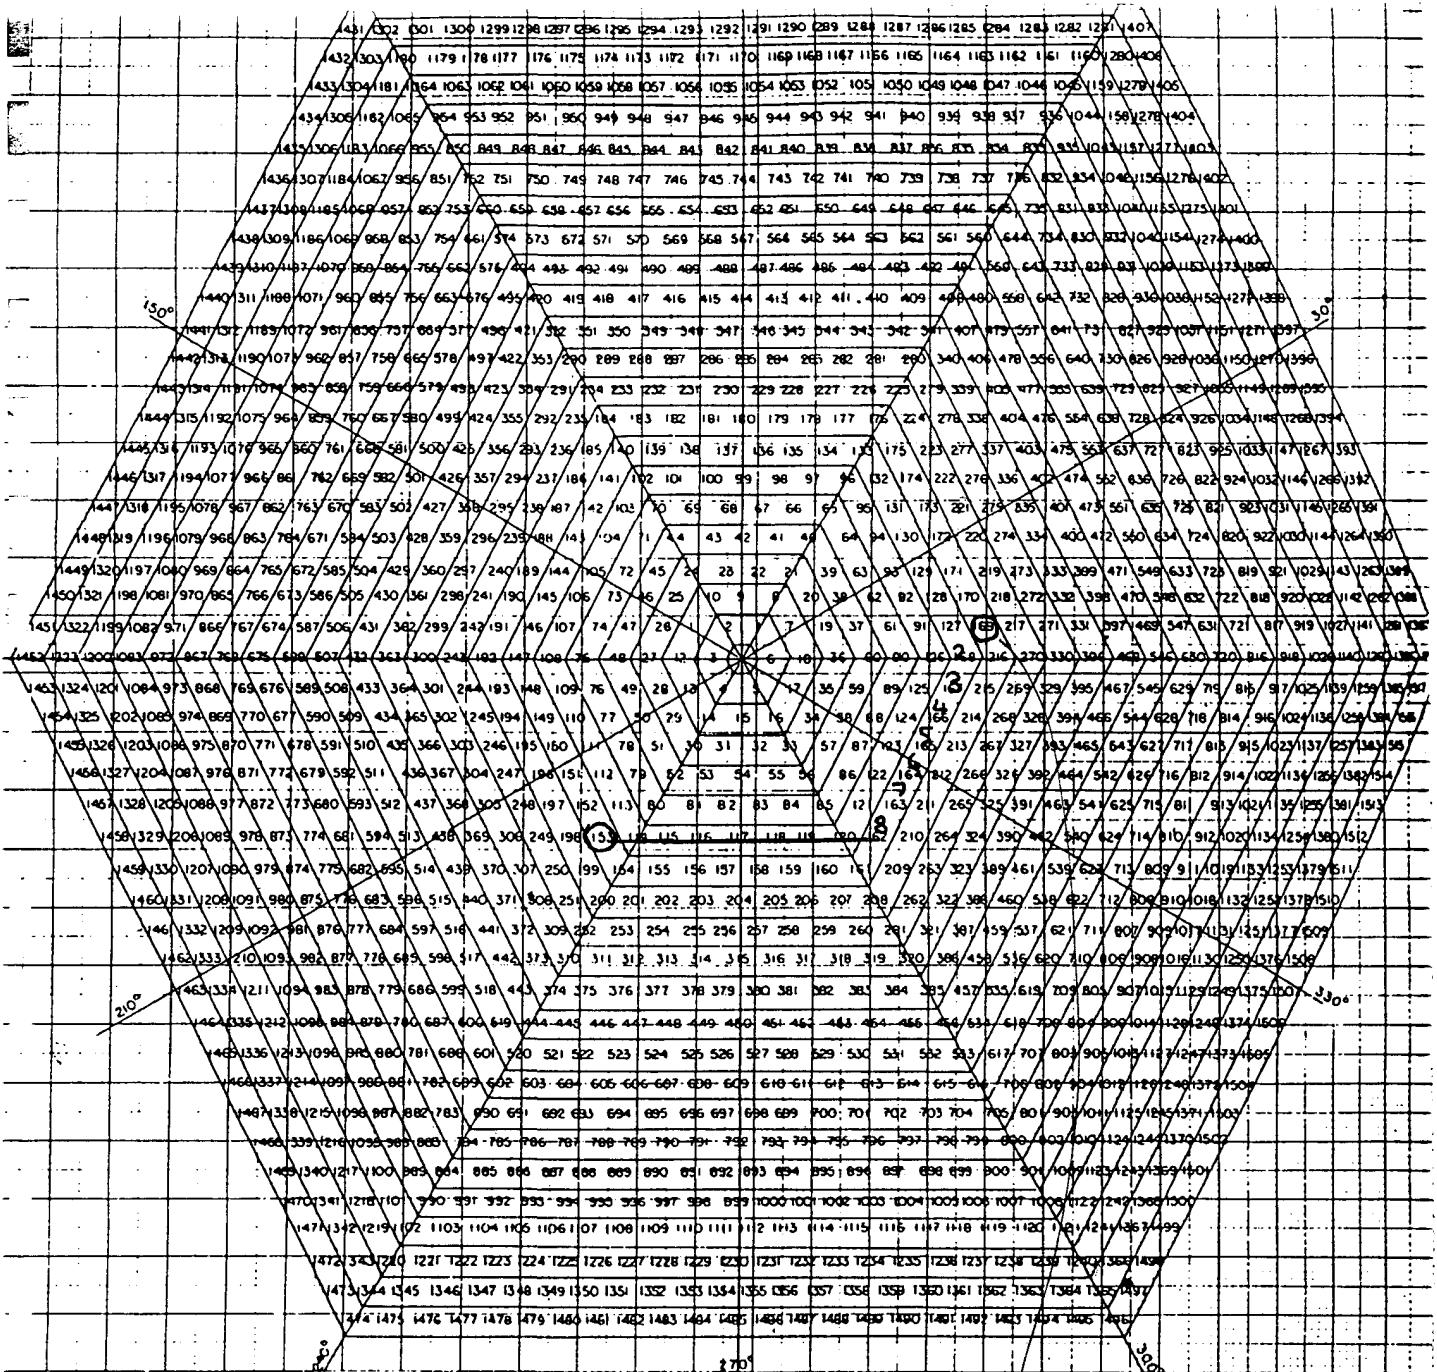

## The hexagon and 1908.

The first thing that struck me about the date Gann made his greatest discovery for finding the trend of stocks and commodities were the numbers themselves.

08 08 (19) 08.

I won't bore you with the details of how but this is what I eventually discovered is an additional property of the hexagon. Support and resistance are calculated by counting the first number (The high or low) as one and counting eight places.

This does not always calculate his target prices but as you have already learnt there are other methods to be used depending on the Astrology of the moment. This system does calculate every price target in Ganns 1954 coffee trades so I believe that it is valid. I have seen it working repeatedly in todays market. Here follows some of Ganns price predictions plus some modern market examples and then the astrology of the complete sequence of Ganns coffee trades.

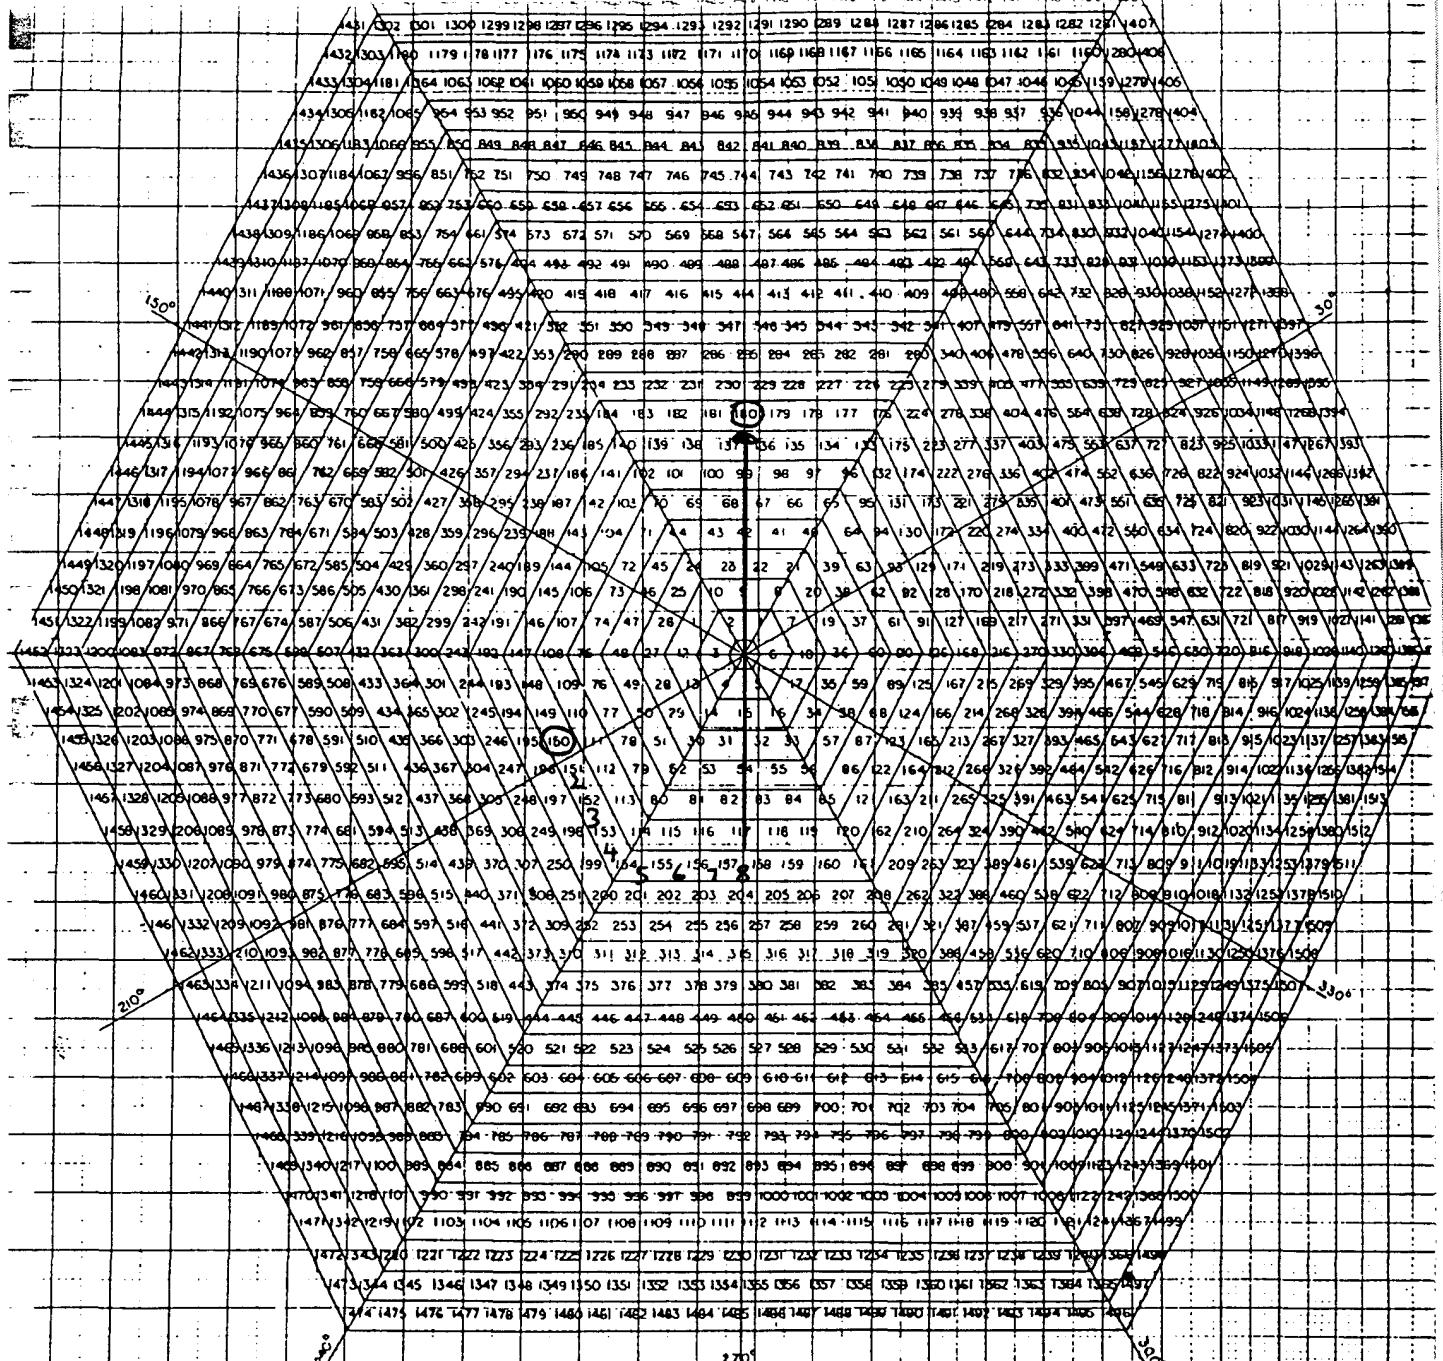

Step 3:

- Parti e train 153
- Train l'opposite che è 162
- coni di partiti & step e train 169

In 1908 when Union Pacific was 168-1/8, he told me that it would not touch 169 before it had a good break. We sold it short all the way down to 152-5/8, covering on the weak spots and putting it out again on the rellies, securing twenty-three points profit out of an eighteen-point wave.

He calculates that May wheat, which is now selling at \$1.02, should not sell below 99 cents, and should sell at \$1.45 next spring.

On cotton, which is now at about the 15 cents level, he estimates that, after a good reaction from these prices, the commodity should reach 18 cents in the spring of 1910. He looks for a corner in the March or May option.

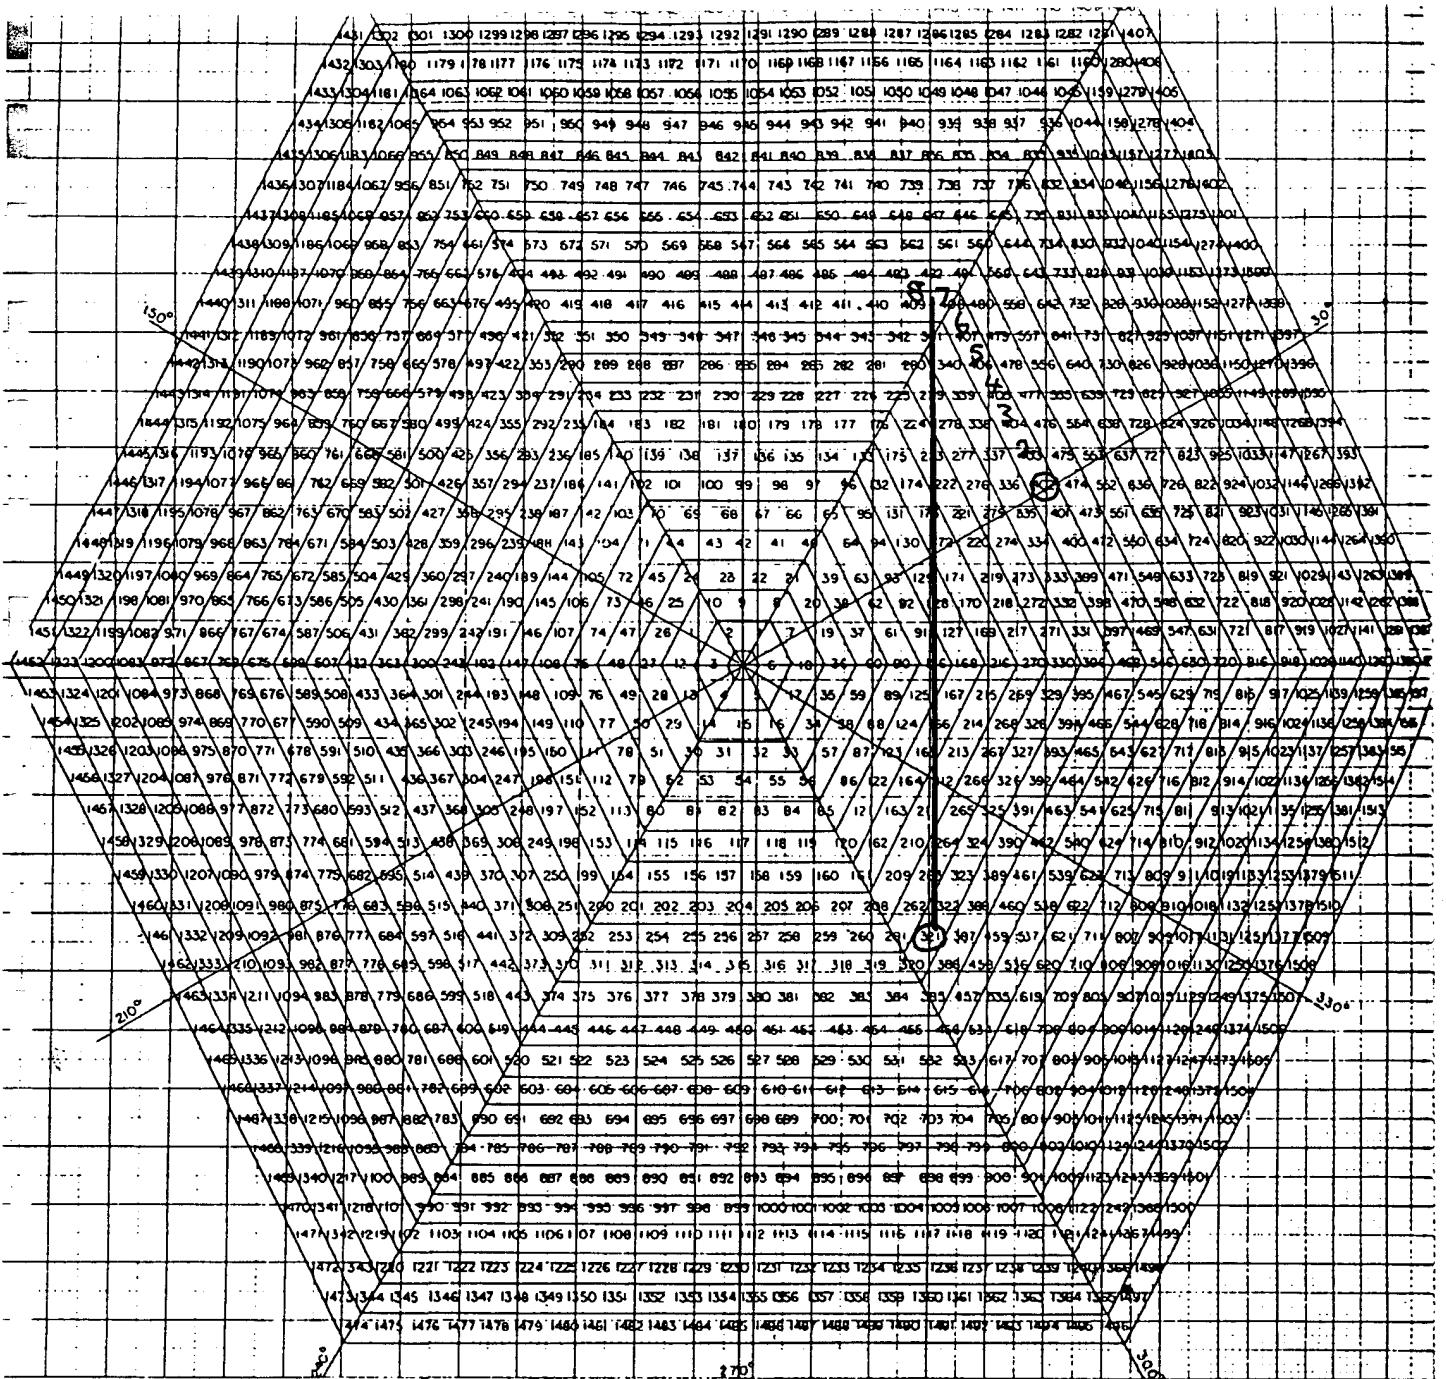

Cotton 12 1/2 (125) cents low predicted high 24 1/2 (245) for September 1927.

"He came to me when United States Steel was selling around 50 and said 'This Steel will run up to 58 but it will not sell at 59. From there it should break 16 3/4 points.' We sold it short around 58 3/4 with a stop at 59. The highest it went was 58 3/4. From there it declined to 41 1/4 -17 1/2 points.

 Dimensions: 800 x 600 pixels

The Moon is critical in short term swings.  
 Gann closed out with the Moon trine Venus 5\* and Venus opposite Saturn 5\*.  
 The aspects are once again balanced.

 Dimensions: 800 x 600 pixels

Gann sold again on April 15th at 87.75.  
 The Moon was again creating a strong aspect a Tee square. In all cases multiple trines were still in force.

#### April 21st Sun trine Mars. Sun opposite Saturn.

Gann took profits on the 14th of April when aspects were balanced by 5\*. This time there were a new set of planets with aspects balanced by 5\*. On this day the Sun was opposite Saturn 5\* on the 14th it was Venus opposite Saturn 5\*.

7 Maggio 1954 ?

Jupiter Ingress.

May Soybean High at 276

} How to use "SQUARE OF NINE"

Gann worked on the basis that Planetary Ingress was a potential trigger for trend change.

Looking at the May bean chart again your first thought would be that 270 (the ingress longitude of Jupiter converted to price  $270^* = 270$  cents.) would be the exact price level. Gann's Personal square of 9 chart had 276 circled on it this being 360 or zero degrees on the Cardinal cross.

Now his square of nine for may beans starts at 44 cents this being the lowest recorded price in the contracts history.

To properly use a square of nine chart (price) that doesn't start at one you need to combine it with another square of nine that does. Why? The price square of nine needs the time square of nine which starts at one. When you superimpose one square on top of the other you will get proper squaring.

Looking at our may bean square of nine superimposed on the time square of nine 40 days from the low is exactly opposite 276 the high. Also 40 days was the square of the range from the low of 2(40). In February 1998 I copied this method with the slight variation in that I also used the 1908 target method. Either way it worked.

The steps

1. convert Jupiter ingress into Longitude degrees to an approximate price area where soybeans are trading.
2. use may soybeans price square of nine and then superimpose the time square of nine to fine tune your target.

This is how Gann would have worked it out Jupiter is about to change signs and so this would be the time for a change of trend so on day 40 time is opposite price 275 is opposite the 238 low and time and price is at aspect  $180^*$  or  $90^*$  square.

This is what I did. On February 4th 1998 Jupiter changed signs and was at zero degrees pisces until the 9th of February. I have found things usually don't get moving until the planet changes to 1 degree of a new sign but from February 4th I monitored the time square of 9 and the price square to see when they were square and then I sold a break of that day's range.

The 1908 target from the 662 low was 694 1/2. Using the square of nine on day 20 the closest price that was square was 695. The actual high was 697.

(Gann never counted the first day of a high or a low saying that they belonged as the last day of the previous price swing.)

This method can be used on all grains when Jupiter is changing signs. Gann marked his chart off in 15 cent target bands this being half of each sign's range of 30 degrees.

Which price divisions of the  $360^*$  circle you use is dependent on the commodities volatility.

For something like oats 15 cents is fine but with soybeans 90\* (1/4 of 360\*) is usual (price 840+90\*=930 etc) when soybeans are at low price levels or trading quietly 45\* is good eg. 500 545 590 etc.

The markings on the following charts are the price/longitude where Jupiter changed signs and they were projected out for the whole year. Where 2 lines are closer together it is because Jupiter is just about to change sign.

W.D.Gann square of nine for may soybeans.

Price start by  
44 ... why?

Time starts from day 1 in the middle of the square.  
Day 40 is opposite price of 276 so it is Square.

Lowest Price in history

↓  
Cylinder or Trading?

$$54 = 45 + 9 - 0 = 54$$

$$71 = 54 + (3 \times 2) - 1 = 71$$

$$86 = 71 + (3 \times 3) - 2 = 86$$

$$123 = 86 + (3 \times 4) - 3 = 123$$

etc. etc.

STEP "1"

83

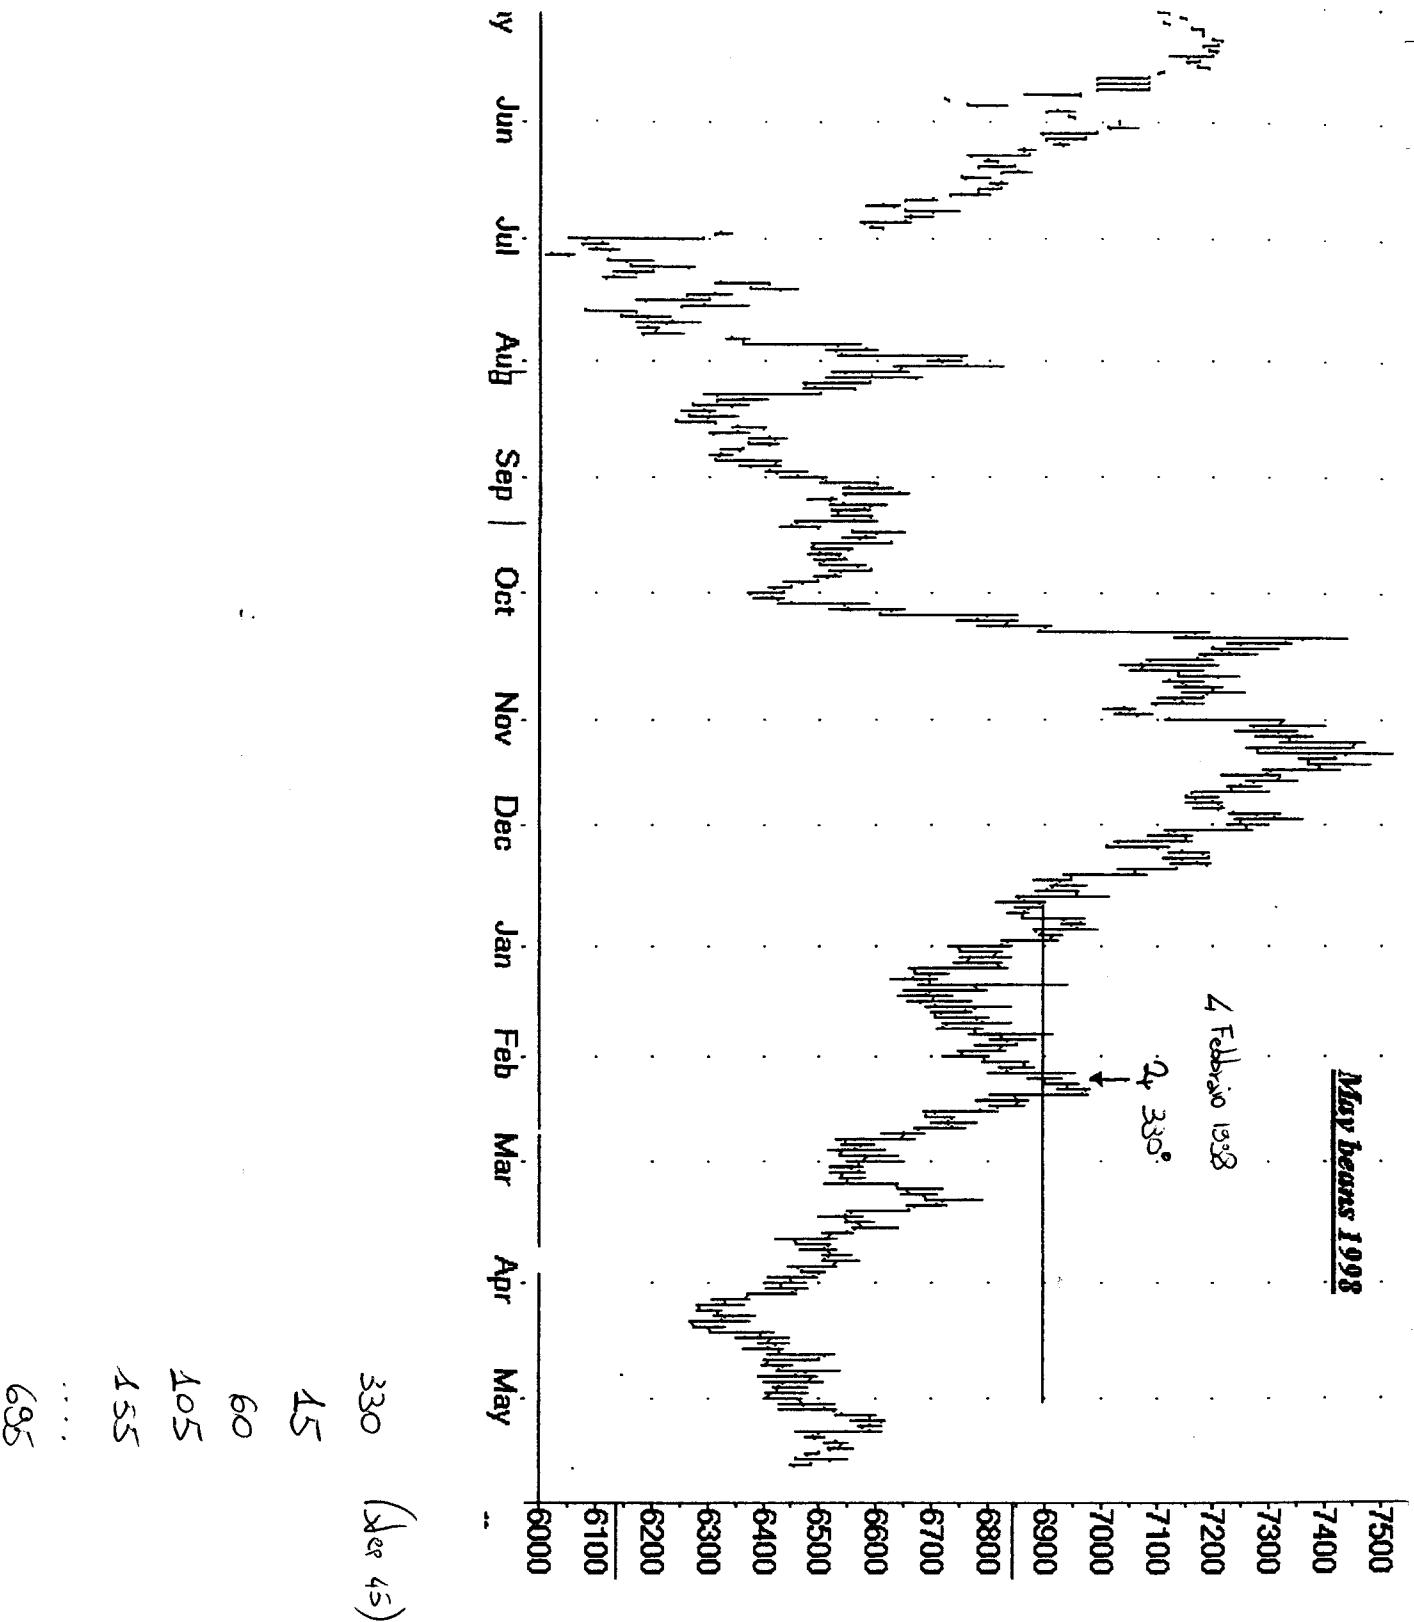

123+

45 + 3 + 3 + 3 + 3 + 3 + 3 + 3 + 3 = 123

Using the hexagon 1908 price target method with soybeans.  
May beans 1989 and 1998, March soybeans 1999.

The hexagon has support and resistance levels at numbers running on the same line both sideways and up and down as well as the 1908 count. These are used on intraday swings as well.

A price can be treated in several ways depending on the volatility. 7500 cents on soybeans will reduce to 750 or 75. When trading intraday you would use 750 but to get longer term targets you would use 75.

### 1908 price target method and soybeans -May beans 1989-

High 100.50=100.5

1908 targets 93.5 too close =930

80.5 opposite =805

74 1/2 =745 actual price hit 747

Low 747 =74.5

1908 targets 81.5

90.5 opposite actual price hit 91.4

RISURRE  
SEMPRE ALLE  
CENTRALE

In a wide ranging market the numbers have to be scaled down otherwise there will be too many targets. 10050 reduces to 100.5.

The first target counting clockwise 100.5 to 93.5 is too close to the current market action to possibly be called a swing.

805 would have been the low on a intraday basis and held the range for 3 days (not marked) no entry was triggered of the daily charts.

It then went lower and missed the bottom target. The target was 745 the actual price hit was 747. Four days later an entry long was triggered.

The entry I use is a break of the 2 days range as recommended by Gann in his swing trading. This means you trail the stop 1cent beyond the high/low of the most recent 2 days once you get into a target area. Intraday use 5 minute charts and tight stops if you are buying and if a double bottom has formed on the 30 minute charts stop and reverse if this is broken.

The target does not have to be exact as a little short fall or penetration is normal. You will see what is permissible from the examples.

The next thing to do believing that the swing low is in place is to draw up another hexagon chart with 1908 targets using 747 as the low. I would use either 74.5 or 75 it is not that important.

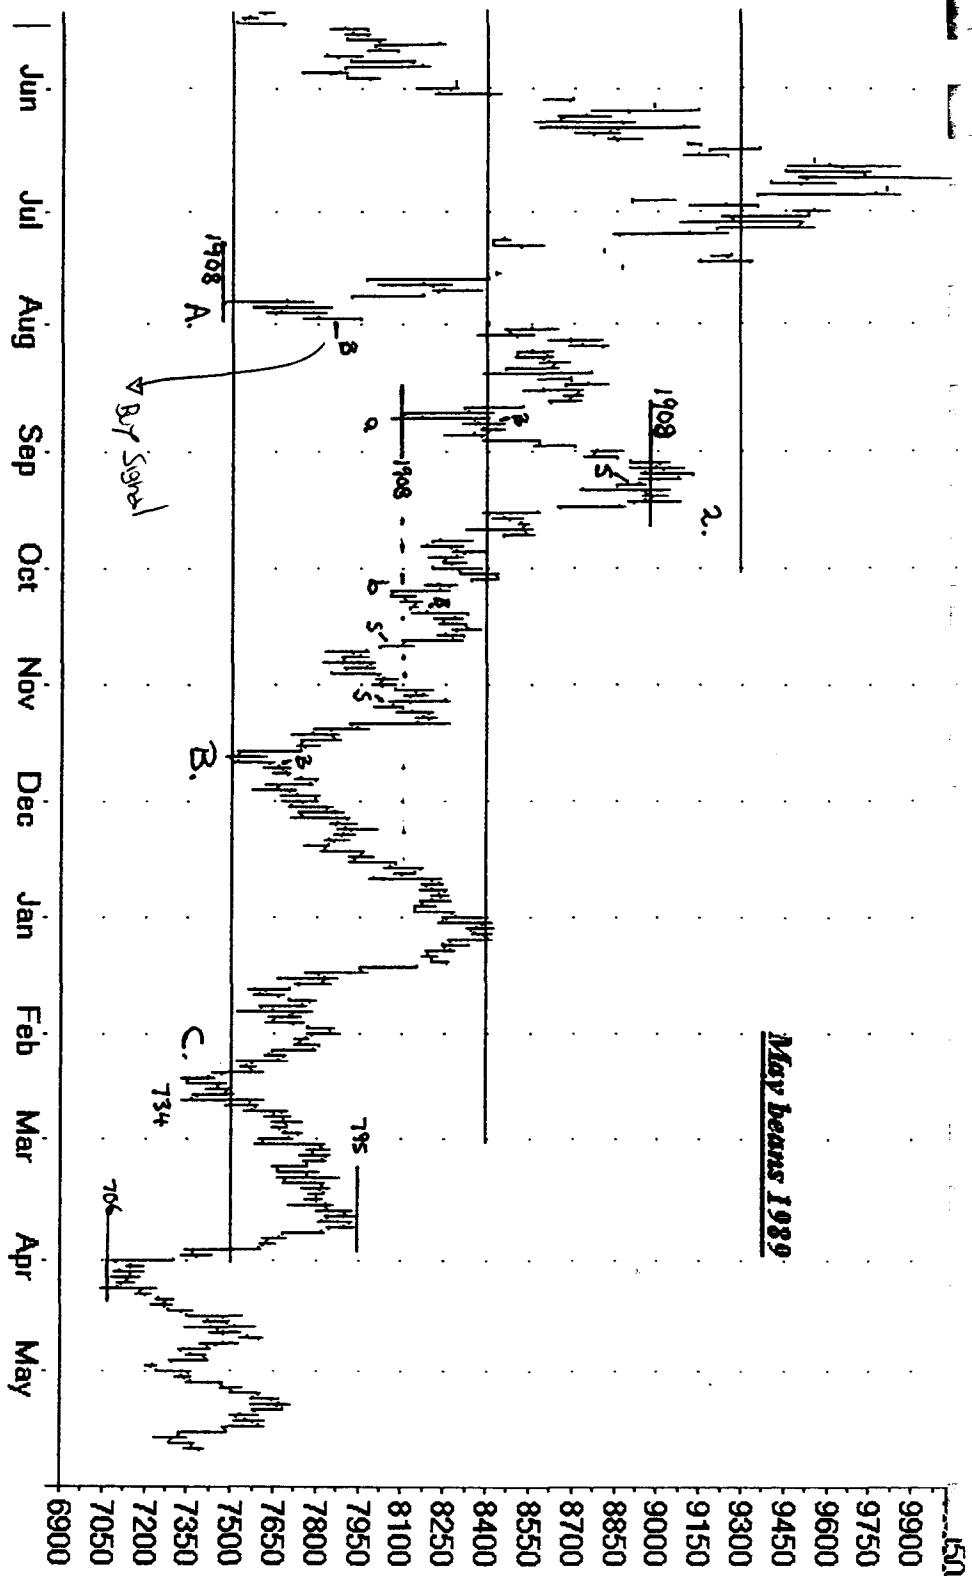

The first target of 81.15 was gapped through so that was never a problem.

With 1908 targets resistance becomes support and vice versa so when the market came back to the 815 level and held this was support and another buy was made on the topside break of the two days range. This took us up to the next 1908 level where we took profits and reversed.

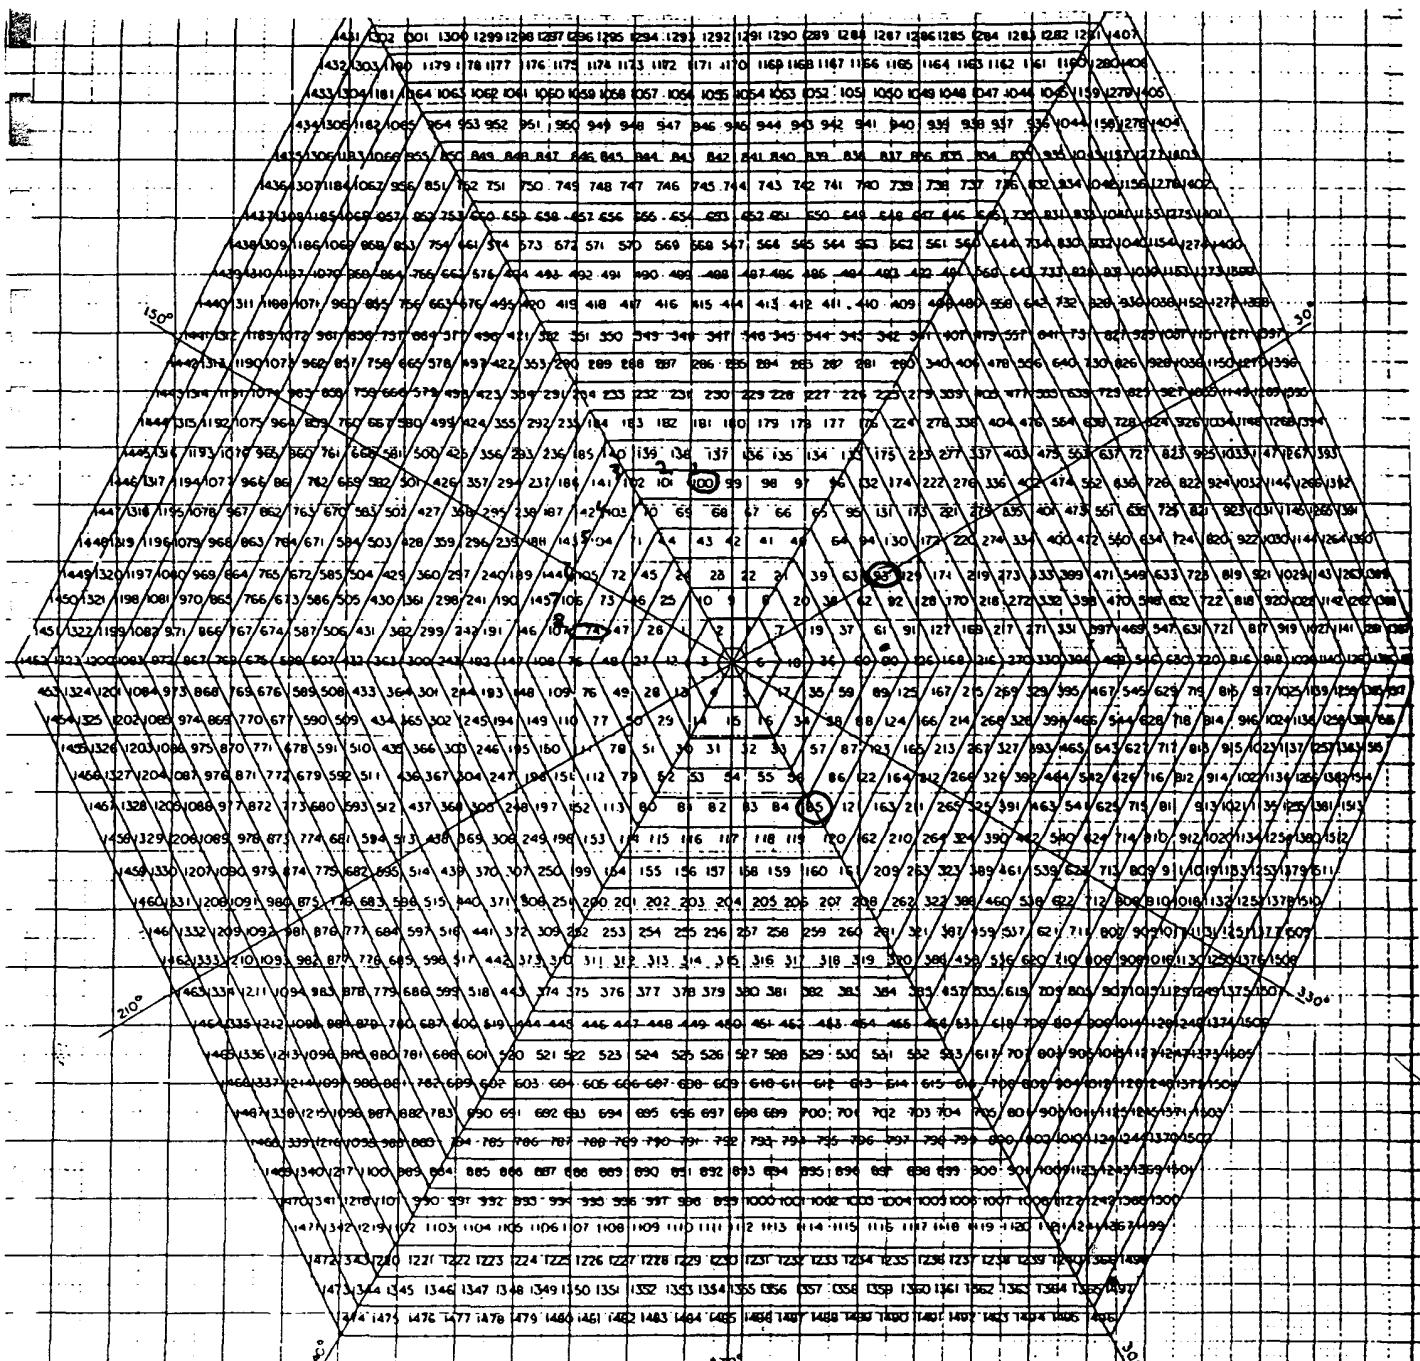

We now have swing high 1 and 2.

Gann always projected targets from the first and second high (low) he mentions this in "How to make profits in stocks and commodities"

*May beans 1939*

100

High 2 914=91.5 is a price projection from the low so the targets that we had on the way up will be the same as the ones on the way down. Now we come to the reason I always recommend taking quick profits on half a position. Choppy markets the death of tight entry trading. In October there was a bounce off 1908 support and what looked like a double low. (a+b.)

Soys went slowly higher and ran out of steam then quickly broke the double 1908 support where you stopped out and reversed. (failure of a double support)

Here follows a period of chop but in which you consistently made small profits. On half your position and still made the bigger gain as the market went to the 1908 target (B) from high number 1.

Point C is interesting a 1908 target that held in July and November was broken. You would always sell this break but note the following price action because it is a reliable signal to buy again. Soys spent 5 days under this major break out and then went nowhere.

The day soys closed higher and above the 1908 line you would go long again.

This is what Gann called regaining the angle when using his 45\* lines etc.

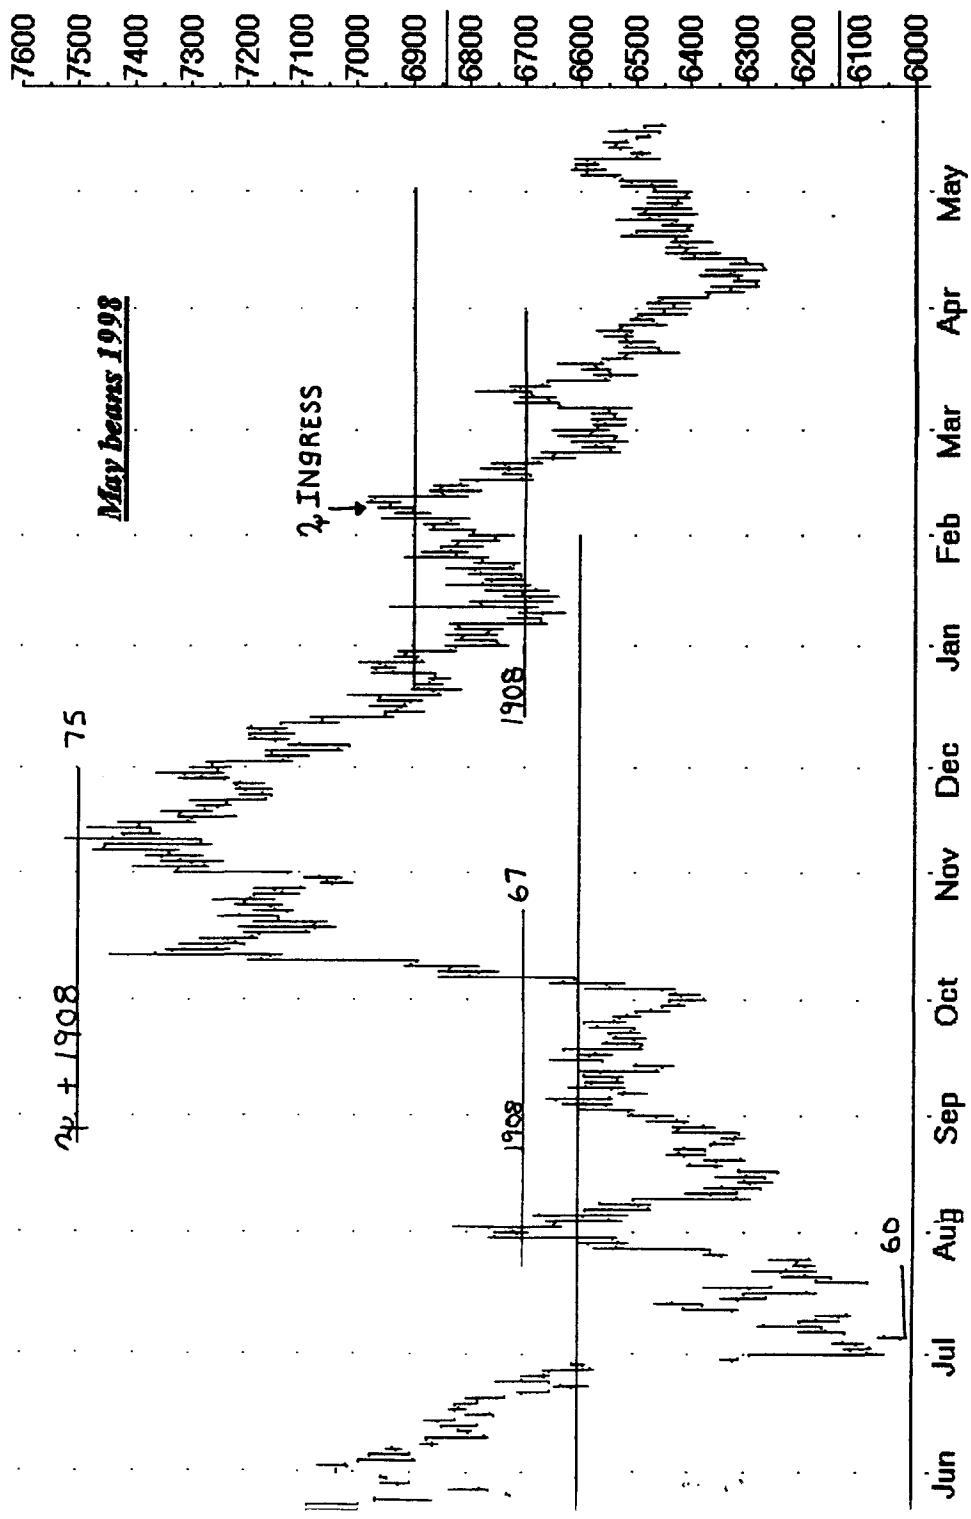

From the new low 734 work out the 1908 targets again.

This is where you have to make a judgment call. Looking back at the beginning of the chart June,July,August,September there was much more volatility than now and this has been decreasing steadily. The rally from C has been steady but slow with small daily ranges and this is why I have used 734 to get the 1908 targets and not 73.4 as I would have earlier.

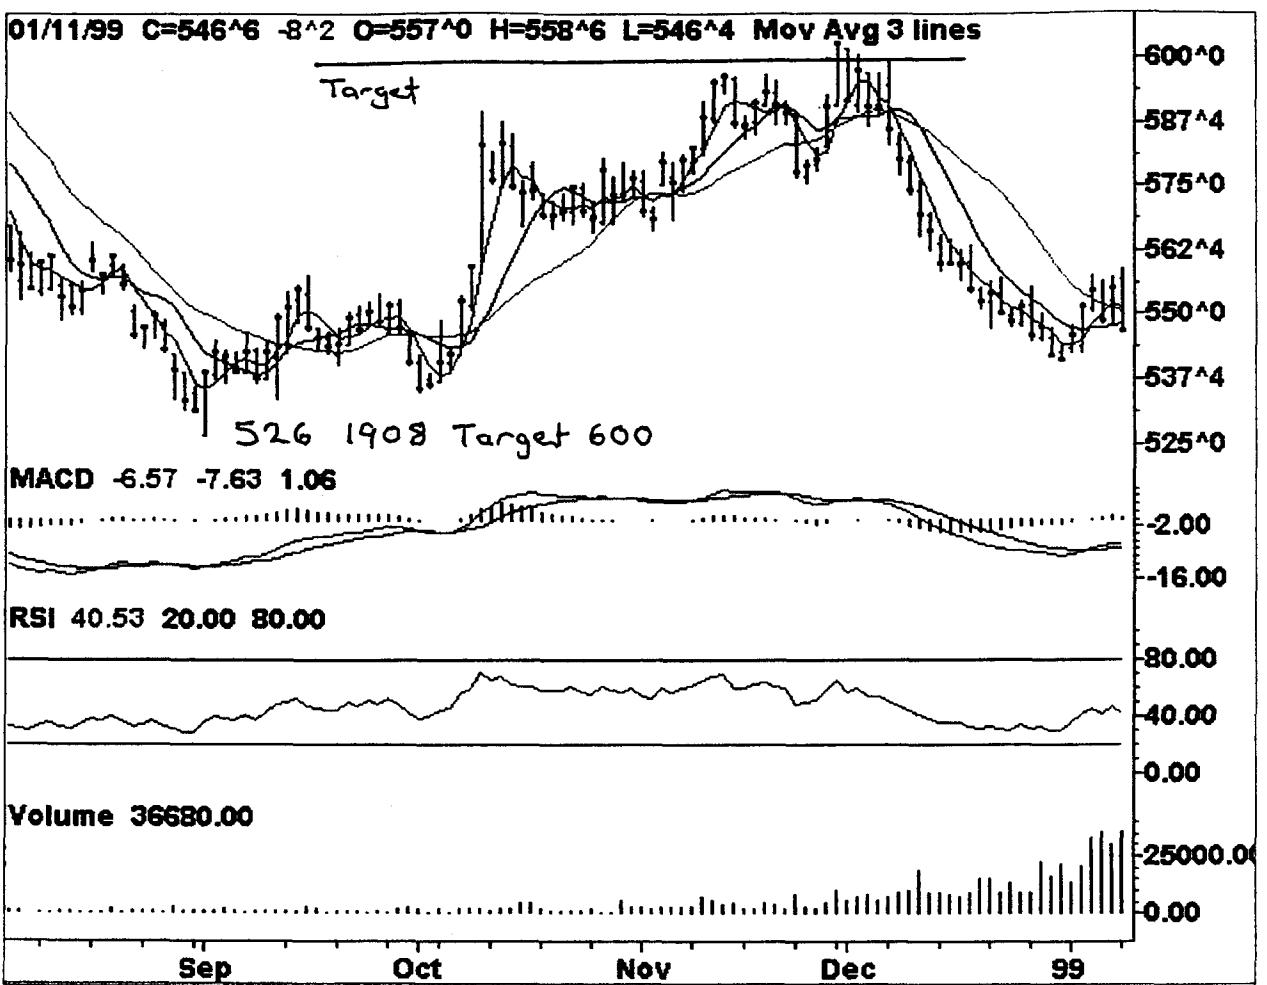

} Summary.

- 1908 targets are scaled depending on volatility.
  - A break of the 2 days range is used for entry.
  - Quick profits are taken on 1/2 the position.
  - With A failure of a 1908 support resistance after holding the market 2 times the position is automatically reversed.

### Examples of the 1908 price target method from recent markets.

- Things to remember with the 1908 price point method.
- Support becomes resistance.
- Big moves come out of big time bases so targets against the trend are usually profit take points that give you an opportunity to re enter at a better price.

## Strange clocks.

Time is measured by the 360\* circle the earth moves around the Sun. There is nothing bizarre about the idea of looking at cycles of say 10 days 4 weeks or the 4 year election cycle etc. If we stretch our imagination a little there is nothing that prevents us from using the other planets as clocks. You will find that there are tradeable cycles made by taking the mechanical path of the planets in relation to the earth and using them to measure time.

There are two ways of tracking the planets. One is heliocentric (earth around the Sun) and geocentric (the planets as viewed from earth) all the examples that are in this book are based on the geocentric ephemerides. An ephemerides is a book containing the position of all planets on any day and what degree longitude they are at in a 360\* circle.

The geocentric view gives some very useful techniques, the first being planets that appear to go backwards (retrograde) and then forward (direct) this means that they cover the same degrees several times. W.D.Gann was a great believer in this as a timing tool and my own researches support this. He believed that planetary conjunctions (planets that are at the same degree longitude of a 360\* circle) and planetary oppositions could cause turns in the market and when one of the planets went retrograde it would catch up with the other planet again forming another conjunction. This process could cause double and triple bottoms and tops. The spot Dmk chart showing the U.S. dollar low in 1995 is a perfect example of this.

I've developed a couple of simple techniques to use retrograde/direct planets and a few examples will make them clear.

## Jupiter head and shoulders.

I was looking for the next time cycle of Jupiter on the Dow. I thought it was possible that a head and shoulders would form. I had the Jupiter position for the left shoulder and the head so I wanted to know when the right shoulder would complete.

The Dow had formed a left shoulder in the later period of Jupiter going retrograde at 21° Aquarius. The head was made on August 7th 1997 this was 7 days after Jupiter changed degree to 18° Aquarius.

$$21^\circ - 18^\circ = 3^\circ + 7 \text{ days}$$

Jupiter would be retrograde until November so the next proportionate point would be made when Jupiter was at 15° Aquarius

$$21^\circ - 18^\circ = 3^\circ \text{ difference}$$

$$18^\circ - 15^\circ = 3^\circ \text{ difference}$$

The high was made 7 days from Jupiter being at 18° so the target date was Jupiter at 15° plus 7 days.

25 August + 7 days is September 1st. This date was a low so it completed the right shoulder scenario. I was still looking for a 2nd top. I then took 3° from 15° = 12° + 7 days.

Jupiter was at 12° on the 30th of September. Then adding 7 days (counting September 30th as 1) The target date was October 6th. The actual high was October 7th.

To summarise.

Shoulder Jupiter 21°.

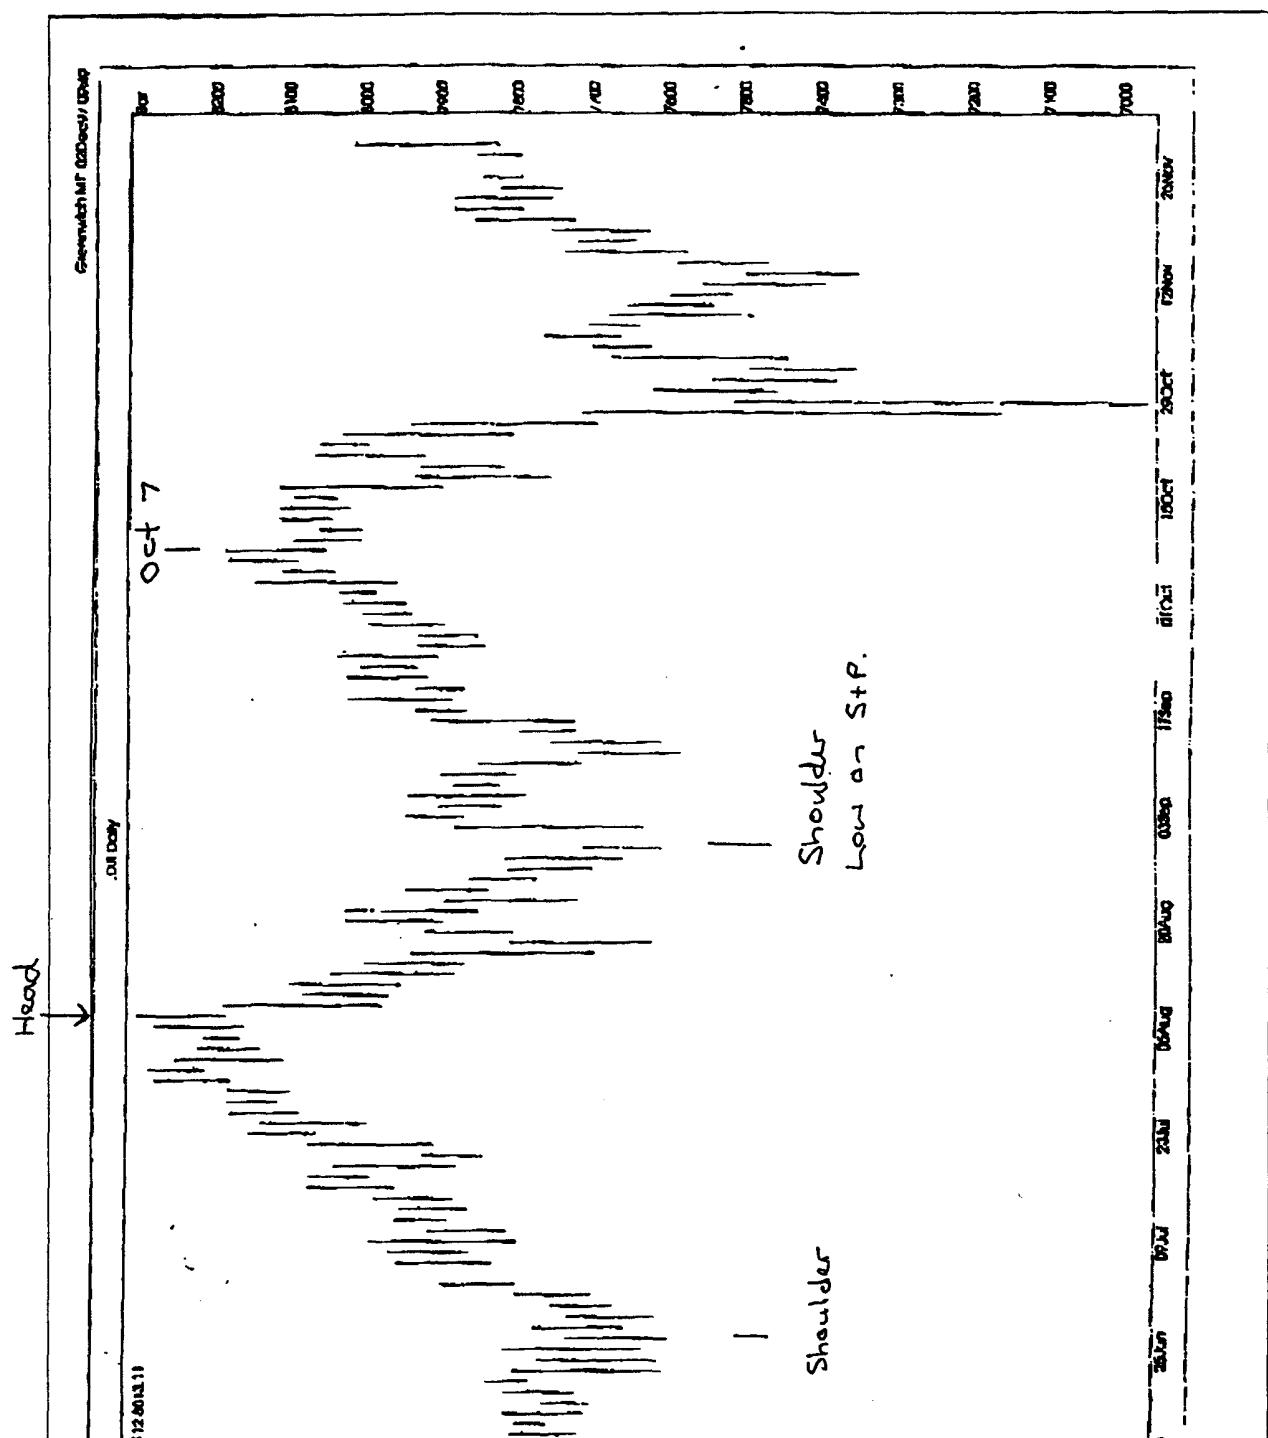

Head Jupiter 18° + 7 days August 7th.

Shoulder Jupiter 15° + 7 days September 1st.

S+P top secondary high dow Jupiter 12° + 7 days.

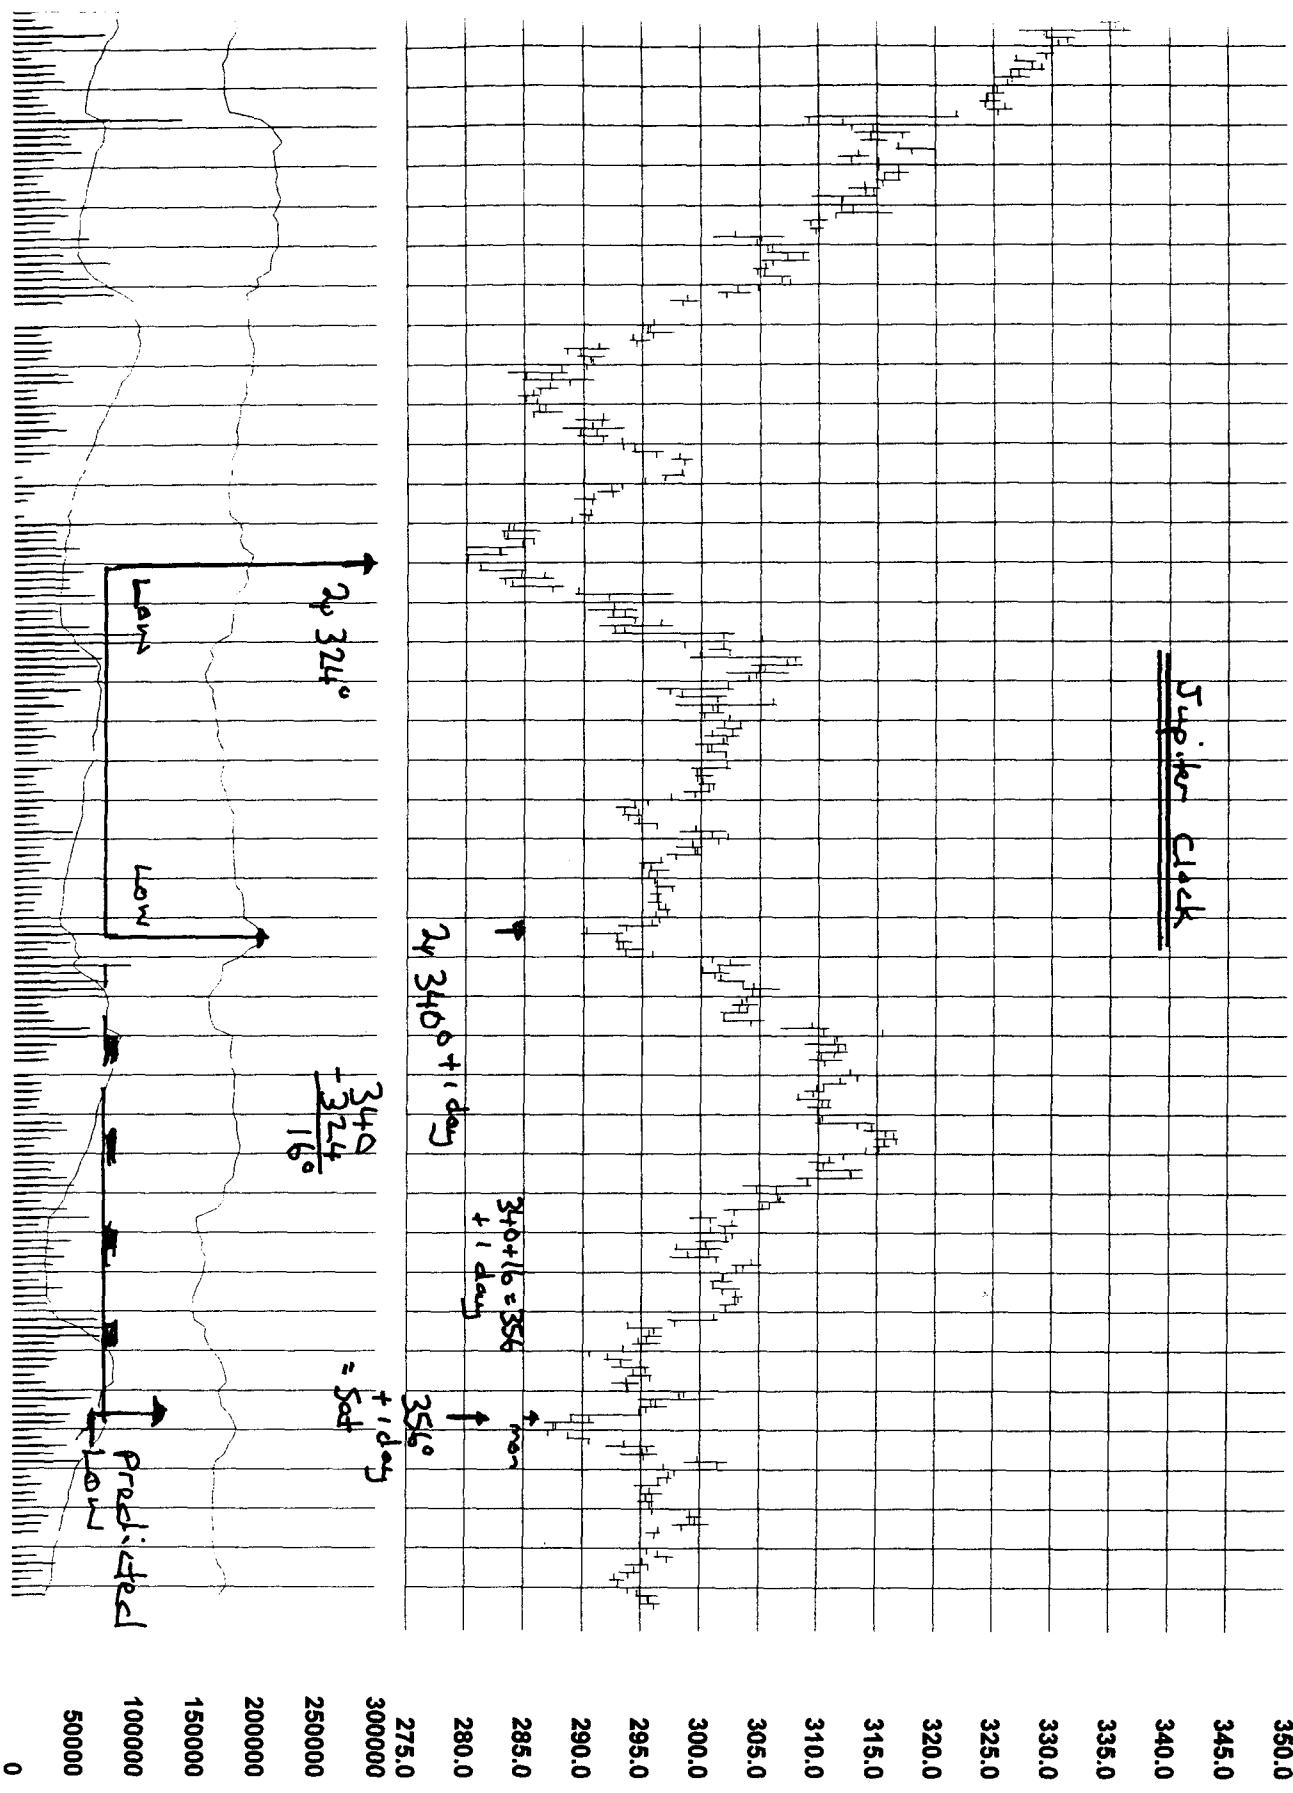

Target October 6th.

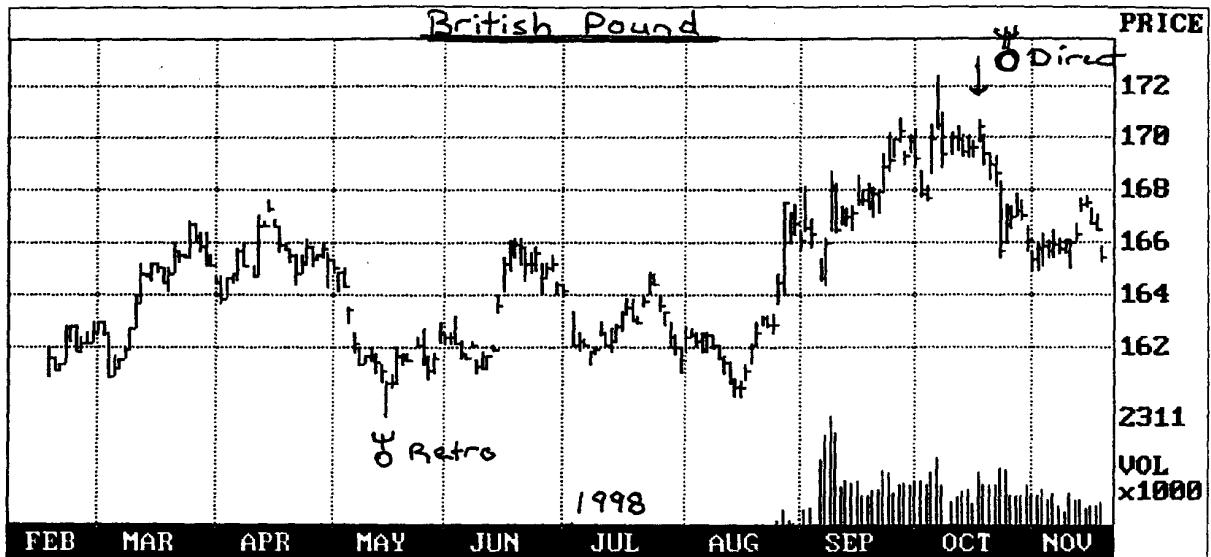

Actual top October 7th.

### Retrograde/Direct cycles.

A once only cycle is produced by a planet going from direct to retrograde and then back to direct. This planetary motion can effect any market so the best way to utilise this method is to simply look for any market where a peak or trough was made as the planets turned retrograde . A cycle will be due when the planets go direct. This may be a high or low or a breakout of a range.

Spot Dmk/U.S. at the major low in 1995. Each time Jupiter returned to the same degree that it was at when the dollar made its first low there would be a cycle low. The third (and last) time this happened the dollar made a final low and started moving much higher.

197

PRICE

128

August 26th 1998.

Sun trine Saturn 0\*

Saturn square Mars 0\*

Using the hexagon chart again we look for any price targets in the area the S+P is trading and the target is 1112.50. Saturn is the pivotal planet in the trine and the square. Also because it is the Sun making a trine we can convert the Sun into longitude degree 153\* and add numbers in 45\* steps to get a price target.

If the market is rising we are looking to sell if it is falling we are looking to buy.

The longitude degree is 1098 so we have 2 targets 1112.50 and 1098.

Here are the price levels for September futures.

August 24th 1098.75 1080.50

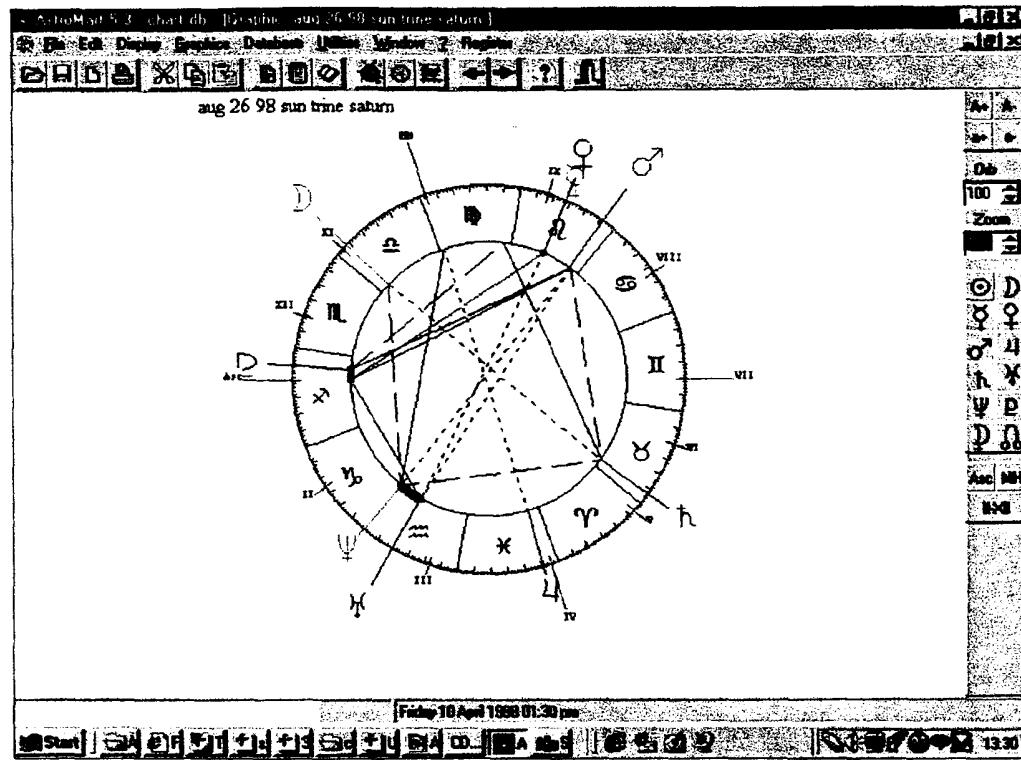

August 25th 1111.00 1088.25

August 26th 1096.50 1077.50

As you see the price targets were hit on the 25th one day before the exact trine and the market slid 176 PTS over six days. If was a safe sell but a trendline break or a breakout of the 2 days range is good when you want confirmation.

## Jupiter clock and the September 23rd high.

When Jupiter is retrograde or has just turned direct again I always look for time cycles.

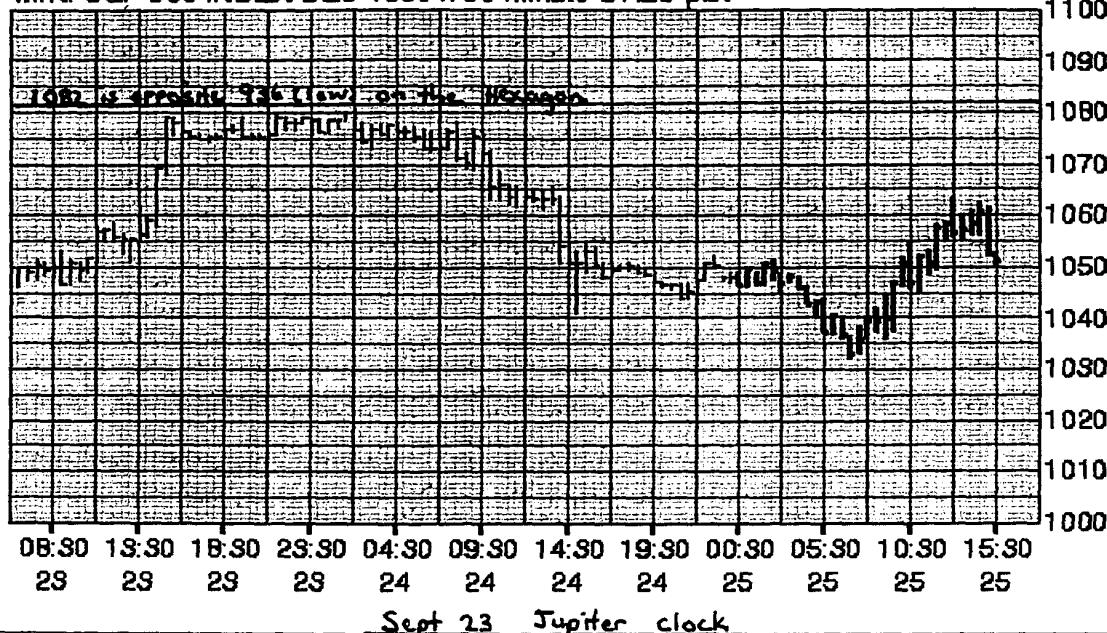

At the July 20th high Jupiter was at 28° pisces. At the low of September 1st Jupiter was at 25° Pisces. It had changed to 25° on the 31st of August so counting the 31st and the 1st was 2 days. Jupiter  $28^\circ - 3^\circ = 25^\circ - 3^\circ = 22^\circ$

The next cycle would be  $25^\circ - 3^\circ + 2$  days Jupiter would change to 22° Pisces on the 23rd of September plus 2 days marking the 23rd to 25th of September as a target time area.

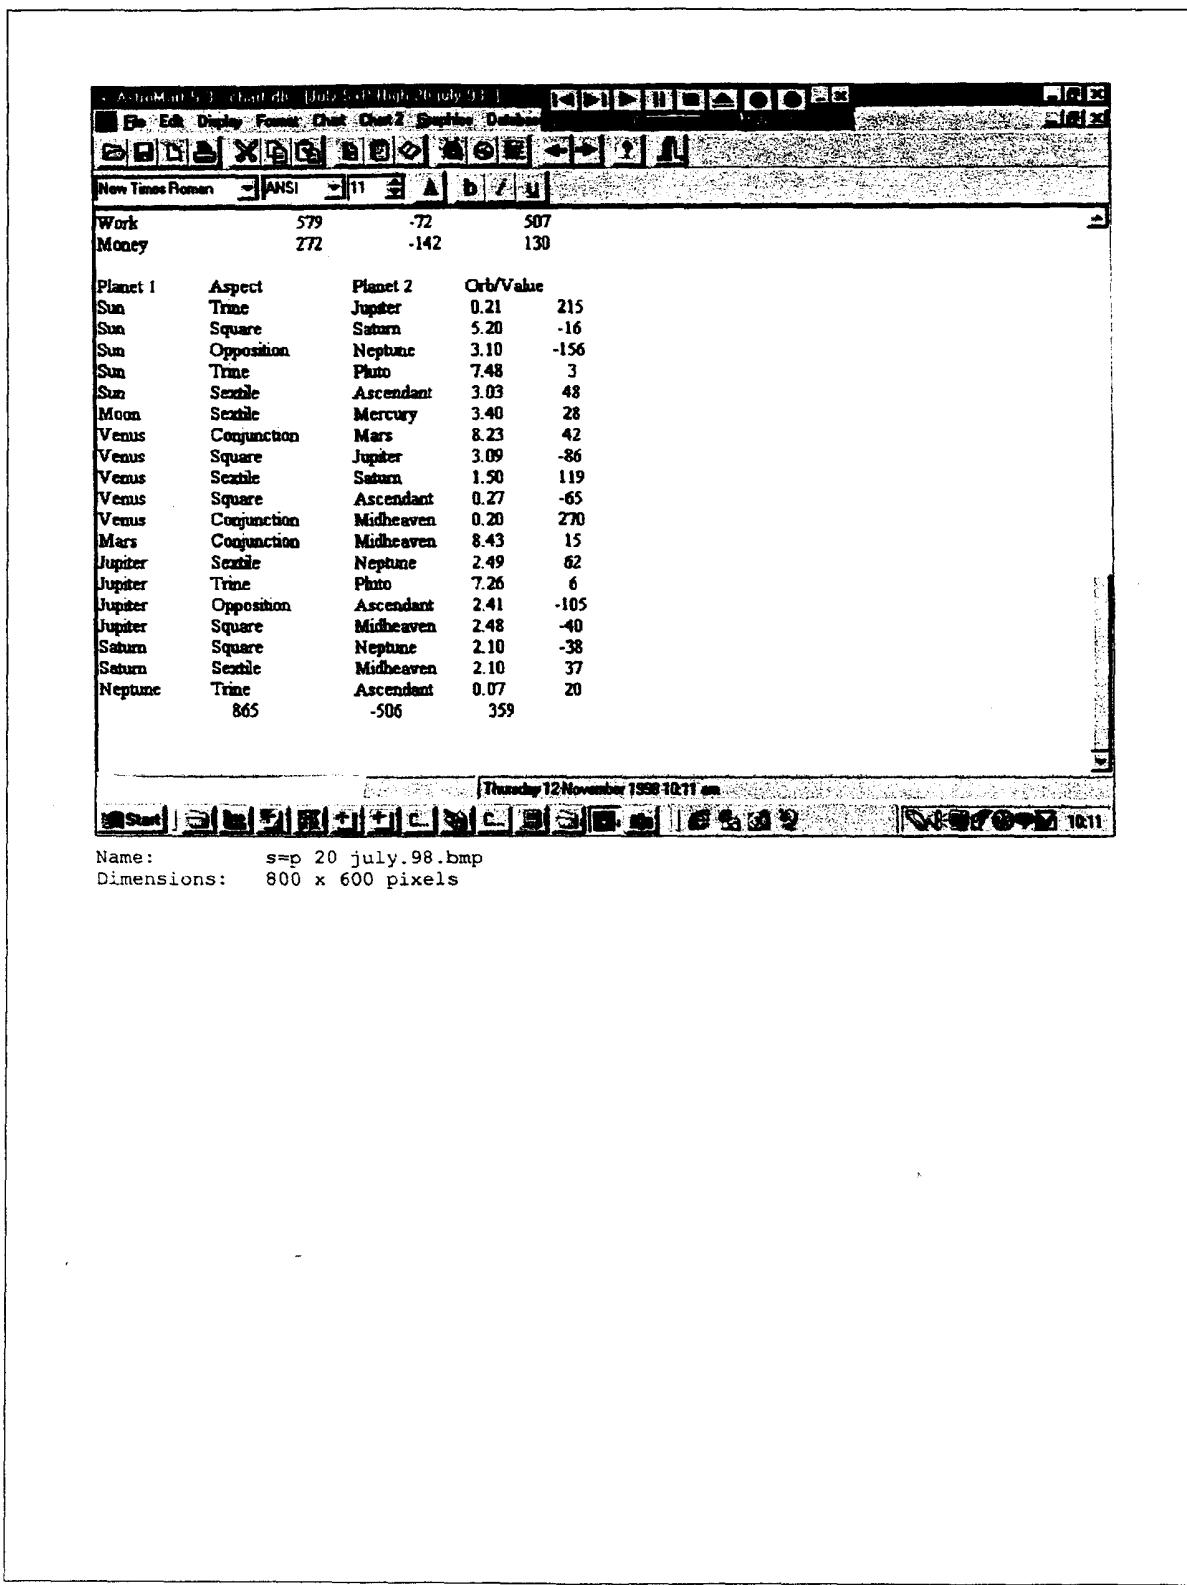

The price target using the 1908 formula was 1182 from the September 1st low of 936. The price was missed by 2 points and declined into the 25th which may have been a cycle low day. In these cases you have to use your judgement whether to hold or fold but you have to enter on a breakout of the range one way or another.

The next pages show the intraday price action at the top it was very quiet and this is the sort of safe trade you can make by trading at the price target with a small stop. The chart of Jupiter clock shows the excellent call on the September 23rd top Notice though at (4) the next clock cycle held the market for 8 days and then got blown out. That is why everyone must trade with stops that are as small as possible. It is interesting to note that there were no 1908 price targets at (4).

points and some good short term swings around the time of an eclipse but I can find no evidence that they were a factor in any of these Gann trades except by chance or if they were they are not necessary to solving them.

As I understand it he felt that eclipses were important and I wonder if he used them to make his annual forecasts. In traditional astrology an eclipse at any point was assigned a meaning such as forecasting a war, drought, panic etc. This would be easy enough to check if we had all of his annual forecasts.

### Robert Gordons great campaign in cotton.

These are some of the Cotton trades from "*Tunnel Thru The Air*."

First we will look at the high as it relates to the low.

Price targets first. A major low of 1250 (125) on the 4th of December 1926. Using the hexagon chart the high on the 8th of September 1927 was 2440 (244) and exactly opposite the low.

The Astrology at the low on 4th of December 1926 was conjunct Mercury/Saturn 4\* of orb, trine Uranus and Saturn/Mercury square Neptune.

The Mercury trine Uranus aspect was the closest at the bottom so the next planet moving clockwise is Mars so this should feature in the high which it does. At the high

Mars is opposite the Uranus/Jupiter conjunction which is trine Saturn.

Now we'll kick off with the Robert Gordon trades from June 25th through to the predicted high on September 6th.

We have requested Mr.Gann to figure out for the readers of The Ticker a few of the most striking indications which appear in his calculations. In presenting these we wish it understood that no man, in or out of Wall Street, is infallible.

Mr.Gann's figures at present indicate that the trend of the stock market should, barring the usual rallies, be toward lower prices until March or April, 1910.

He calculates that May wheat, which is now selling at \$1.02, should not sell below 99 cents, and should sell at \$1.45 next spring.

On cotton, which is now at about the 15 cents level, he estimates that, after a good reaction from these prices, the commodity should reach 18 cents in the spring of 1910. He looks for a corner in the March or May option.

Whether these figures prove correct or not, will in no sense detract from the record which Mr. Gann has already established.

Mr.Gann was born in Lufkin, Texas, and is thirty-one years of age. He is a gifted mathematician, has an extraordinary memory for figures, and is an expert Tape Reader. Take away his science and he would beat the market on his intuitive tape reading alone.

Endowed as he is with such qualities, we have no hesitation in predicting that within a comparatively few years William D.Gann will receive full recognition as one of Wall Street's leading operators.

Note:-Since the above forecast was made, Cotton has suffered the expected decline, the extreme break having been 120 points. The lowest on May wheat thus far has been \$ 1.01-5/8. It is now selling at \$ 1.06 1/4.

"After years of patient study I have proven to my entire satisfaction as well as demonstrated to others that vibration explains every possible phase and condition of the market."

In order to substantiate Mr.Gann's claims as to what he has been able to do under this method, we called upon Mr.William E. Gilley, an Inspector of imports, 16 Beaver Street, New York. Mr.Gilley is well-known in the downtown district. He himself has studied stock market movements for twenty-five years, during which time he has examined every piece of market literature that has been issued and procurable in Wall Street. It was he who encouraged Mr.Gann to study out the scientific and mathematical possibilities of the subject. When asked what had been the most impressive of Mr. Gann's work and predictions , he replied as follows:

"It is very difficult for me to remember all the predictions and operations of Mr.Gann which may be classed as phenomenal, but the following are a few: In 1908 when Union Pacific was 168-1/8, he told me that it would not touch 169 before it had a good break. We sold it short all the way down to 152-5/8, covering on the weak spots and putting it out again on the rallys, securing twenty-three points profit out of an eighteen-point wave.

"He came to me when United States Steel was selling around 50 and said 'This Steel will run up to 58 but it will not sell at 59. From there it should break 16 3/4 points.' We sold it short around 58 3/4 with a stop at 59. The highest it went was 58 3/4. From there it declined to 41 1/4 -17 1/2 points.

"At another time wheat was selling at about 89 cents. He predicted that the May option would sell at \$1.35. We bought it and made large profits on the way up. It actually touched \$1.35 1/2.

"When Union Pacific was 172, he said it would go to 184-7/8 but not an eighth higher until it had had a good break. It went to 184-7/8 and came back from there eight or nine times. We sold it short repeatedly with a stop at 185 and were never caught. It eventually came back to 172 1/2.

"Mr.Gann's calculations are based on natural law. I have followed his work closely for years. I know that he has a firm grasp of the basic principles which govern stock market movements, and I do not believe any other man on earth can duplicate the idea or his method at the present time.

"Early this year he figured that the top of the advance would fall on a certain day in August and calculated the prices at which the Dow-Jones averages would then stand. The market culminated on the exact day and within four-tenths of one percent of the figures predicted."

"You and Mr.Gann must have cleaned up considerable money on all these operations," was suggested.

movements. I then decided to devote ten years of my life to the study of natural law as applicable to the speculative markets and to devote my best energies toward making speculation a profession. After exhaustive researches and investigations of the known sciences, I discovered that the Law of Vibration enabled me to accurately determine the exact points to which stocks or commodities should rise and fall within a given time. The working out of this law determines the cause and predicts the effect long before the Street is aware of either. Most speculators can testify to the fact that it is looking at the effect and ignoring the cause that has produced their losses.

"It is impossible here to give an adequate idea of the Law of Vibration as I apply it to the market, however, the layman may be able to grasp some of the principles when I state that the Law of Vibration is the fundamental law upon which wireless telegraphy, wireless telephone and phonographs are based. Without the existence of this law the above inventions would have been impossible.

"In order to test out the efficiency of my idea I have not only put in years of labor in the regular way, but I spent nine months working night and day in the Astor Library of New York and in the British Museum of London, going over the records of stock transactions as far back as 1820. I have incidentally examined the manipulations of Jay Gould Drew Commodore Vanderbilt, and all the other important Wall Street manipulators from that time to the present day. I have examined every quotation of Union Pacific prior to and from the time of E.H. Harriman's securing control, and can say that of all the manipulations in the history of Wall Street, Mr. Harriman's was the most masterly. The figures show that, whether unconsciously or not, Mr. Harriman worked strictly in accordance with natural law.

"In going over the history of markets and the great mass of related statistics, it soon becomes apparent that certain laws govern the changes and variations in the value of (Natal) stocks and there exists a periodic or cyclic law, which is at the back of all these ~~Eclipse cycle~~ movements. Observation has shown that there are regular periods of intense activity on the Exchange followed by periods of inactivity. Mr. Henry Hall, in his recent book devoted much space to "Cycles of Prosperity and Depression" which he found recurring at regular intervals of time. The law which I have applied will not only give these long cycles or swings, but the daily and even hourly movements of stocks. By knowing the exact vibration of each individual stock I am able to determine at what point each will receive support and at what point the greatest resistance is to be met.

Those in close touch with the market have noticed the phenomena of ebb and flow, or rise and fall in the value of stocks. At certain times a stock will become intensely active, large transactions being made in it, at other times this same stock will become practically stationary or inactive with a very small volume of sales. I have found that the Law of Vibration governs and controls these conditions. I have also found that certain phases of this law governs the rise in a stock and an entirely different rule operates on the decline.

*transits*  
"While Union Pacific and other railroad stocks which made their high prices in August were declining, United States Steel common was steadily advancing. The Law of Vibration was at work, sending a particular stock on the upward trend, whilst others were trending downward.

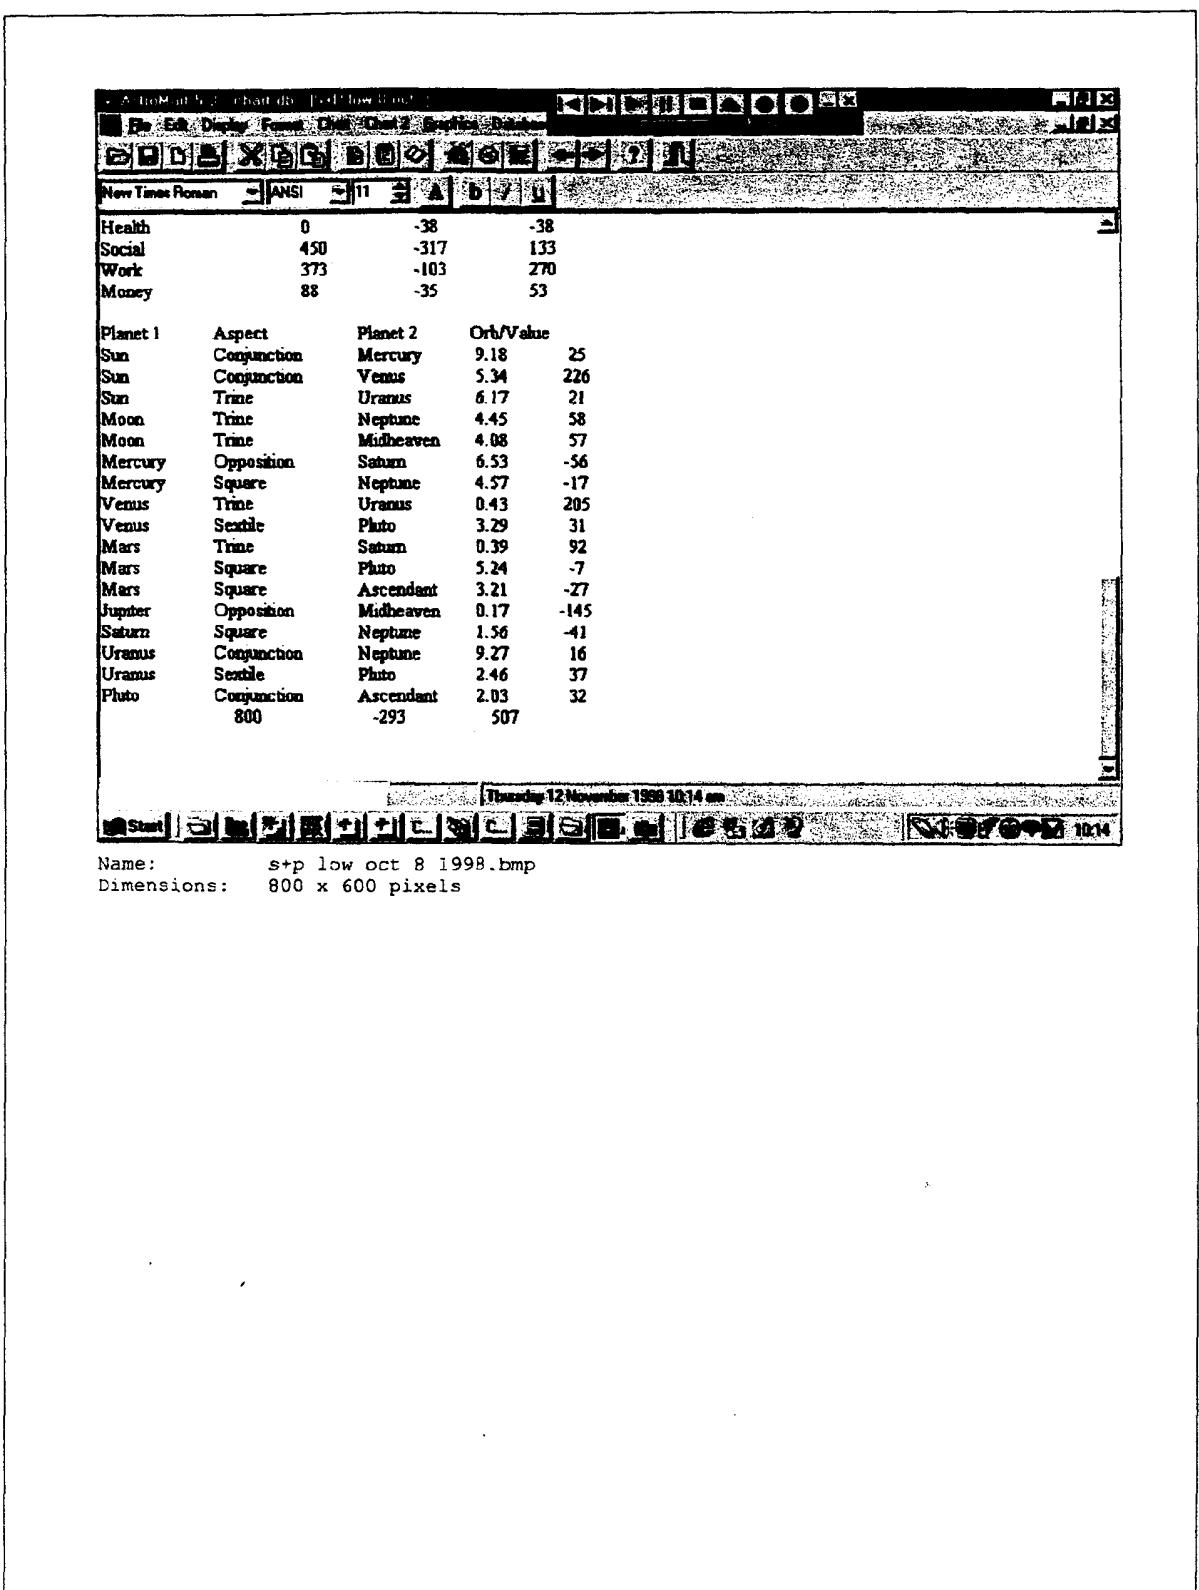

## The W.D.Gann Astrological method.

A trine must be present:

- the trine will either have a conjunction at one end (Pg. 4)
- or at the midpoint/apex
- ✗ or within the 120° arc of the trine
  - or the trine can be linked by a square (Pg. 8)
  - or an opposition to another conjunction (1 planet is part of both the square and the trine) but a conjunction does not have to be present if most aspects are balanced ie.the degree of separation of the aspects is the same.

Or planets make aspect at price on the hexagon chart.

०८४

Lion

June 10th 1927.

June 10,1927

Sold Oct cotton at 17.30  
Sold Dec cotton at 17.50

This is a fantastic set up and contains the elements that we have been looking at.  
A grand trine with a conjunction at not one point but two just to hammer home the point.

Saturn trine Jupiter conjunct Uranus 2\*  
Saturn trine Venus conjunct Mars 0\*  
Sautrn trine Uranus 0\*  
Venus trine Uranus 0\*  
Mars trine Uranus 0\*

Sun trine Moon with Venus conjunct Mars within the trine.  
Venus and Mars which are part of the grand trine are also Square Moon.

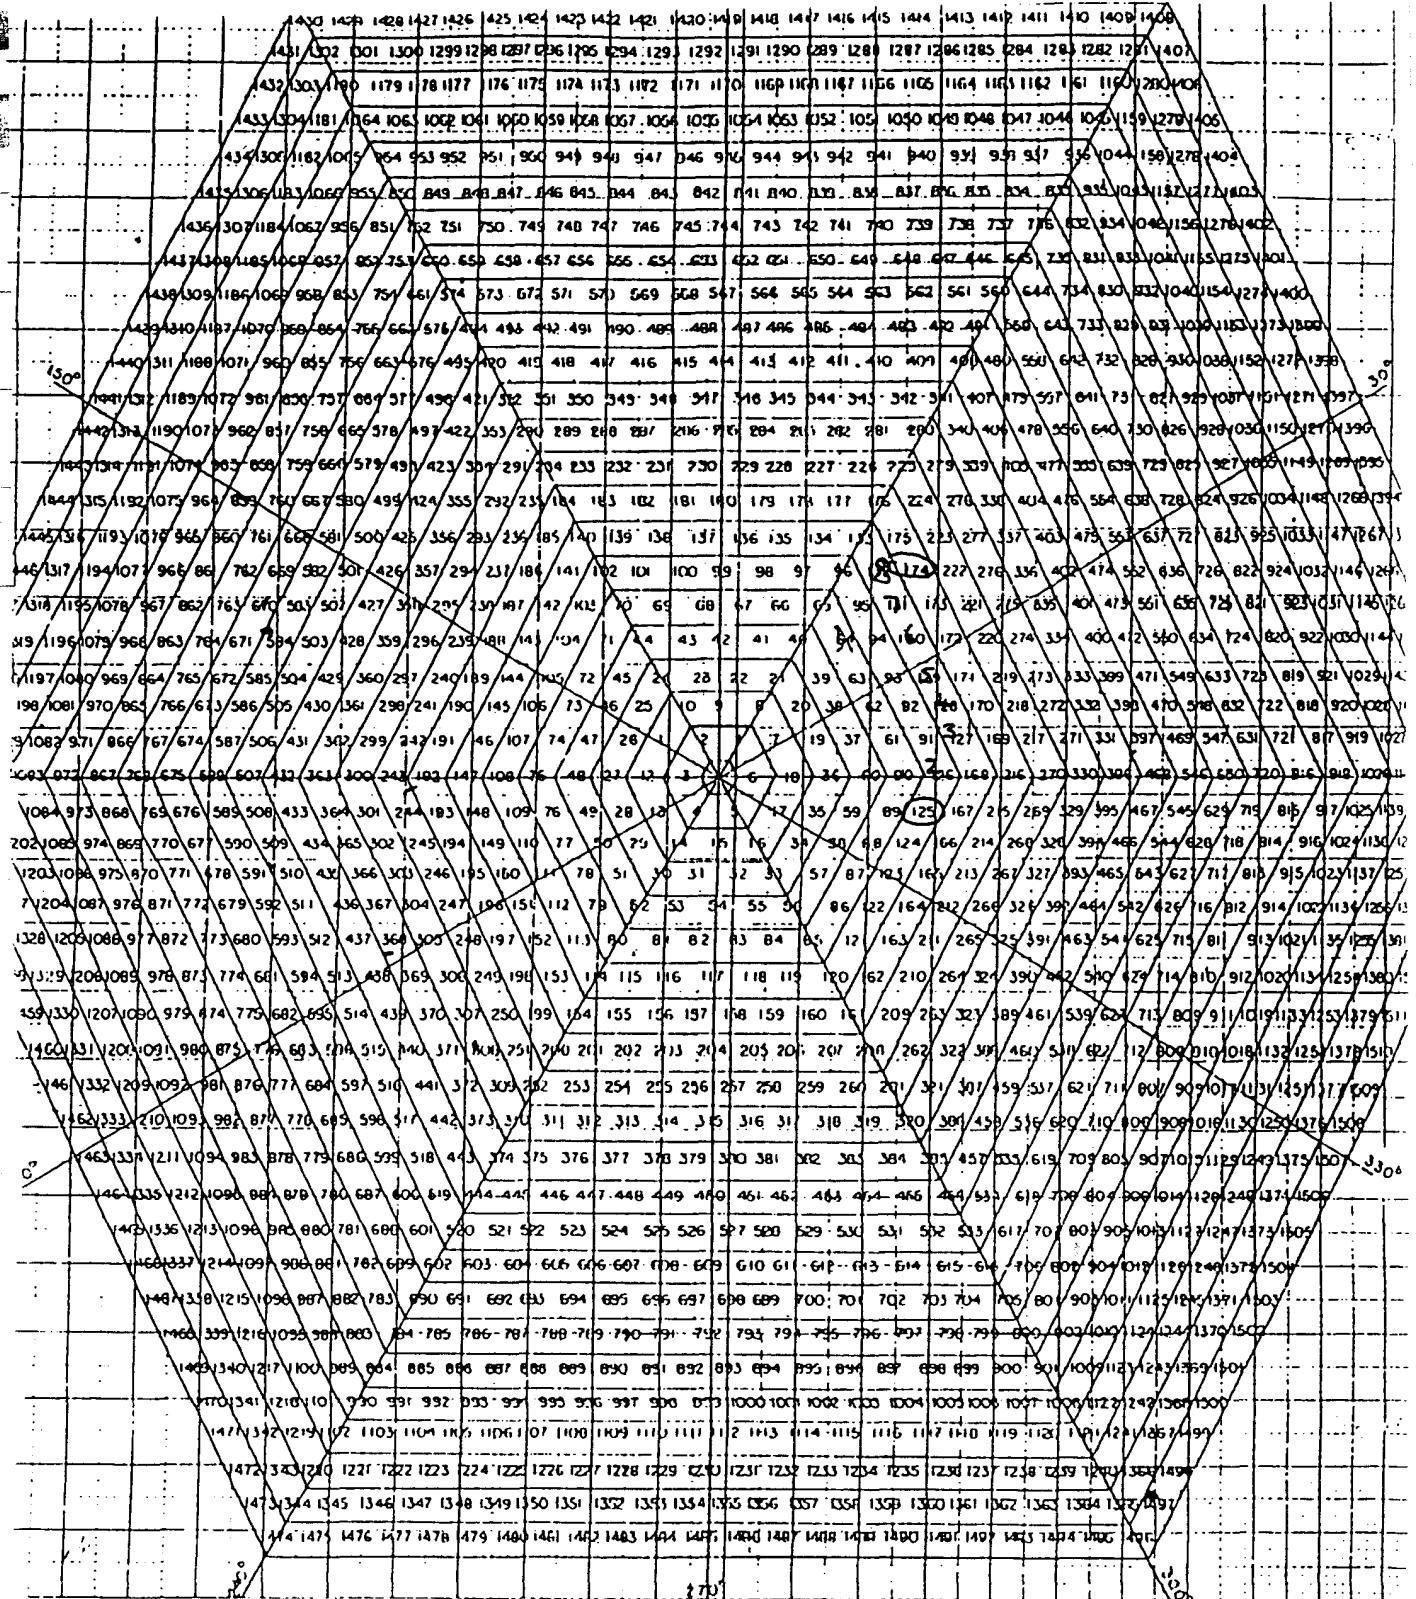

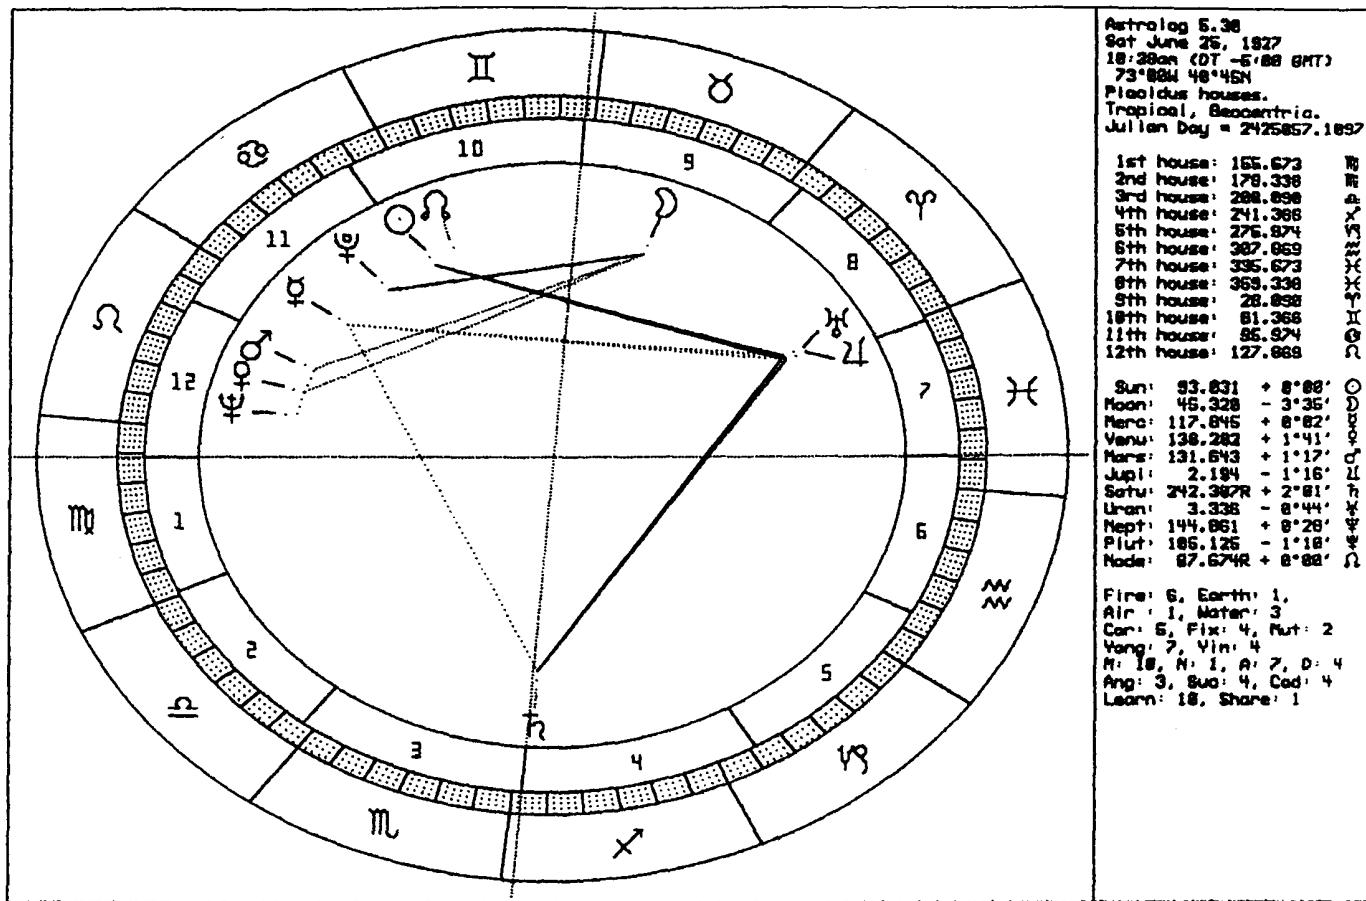

Diagram 13-8 The hexagon chart.

June 10th 1927 Sold at 17.30 Oct and 17.50 Dec  
The 1908 Target from 4th Dec 1926 was 17.40  
(175.8) (174.8)

1:	Sun (Can)	Squ (Ari)	Uranus	- orb: -0:18'	- power: 15.40
2:	Sun (Can)	Squ (Ari)	Jupiter	- orb: +0:50'	- power: 14.33
3:	Moon (Tau)	Sex (Can)	Pluto	- orb: -0:11'	- power: 10.22
4:	Moon (Tau)	Squ (Leo)	Venus	- orb: +2:57'	- power: 8.84
5:	Jupiter (Ari)	Con (Ari)	Uranus	- orb: +1:08'	- power: 8.38
6:	Moon (Tau)	Squ (Leo)	Mars	- orb: -3:40'	- power: 7.58
7:	Jupiter (Ari)	Tri [Sag]	Saturn	- orb: -0:06'	- power: 5.91
8:	Saturn [Sag]	Tri (Ari)	Uranus	- orb: +1:01'	- power: 5.13
9:	Mercury (Can)	Tri (Ari)	Jupiter	- orb: -4:20'	- power: 2.29
10:	Mercury (Can)	Tri [Sag]	Saturn	- orb: +4:27'	- power: 2.19
11:	Mercury (Can)	Tri (Ari)	Uranus	- orb: -5:29'	- power: 1.30
12:	Venus (Leo)	Con (Leo)	Neptune	- orb: +6:34'	- power: 0.62
13:	Venus (Leo)	Con (Leo)	Mars	- orb: +6:38'	- power: 0.52

July 25th 1927.

Sold 500 October cotton at 19.00

Sold 500 December at 19.20

Went short 500 December at 19.20.

Decline followed as he expected.

As usual the first step is to look for the trines

Sun trine Saturn 0\*

Sun trine Jupiter Uranus 1\*

So here we have another grand trine with the Sun acting as the trigger this time

Saturn is square Mars 0\*

The high price of 19.20 (192) is exactly opposite the June 25th low of 16.80 (168)

The reality of the 1908 targets is that they shift from 8 places to opposite and back otherwise prices would be forever just oscillating back and forth.

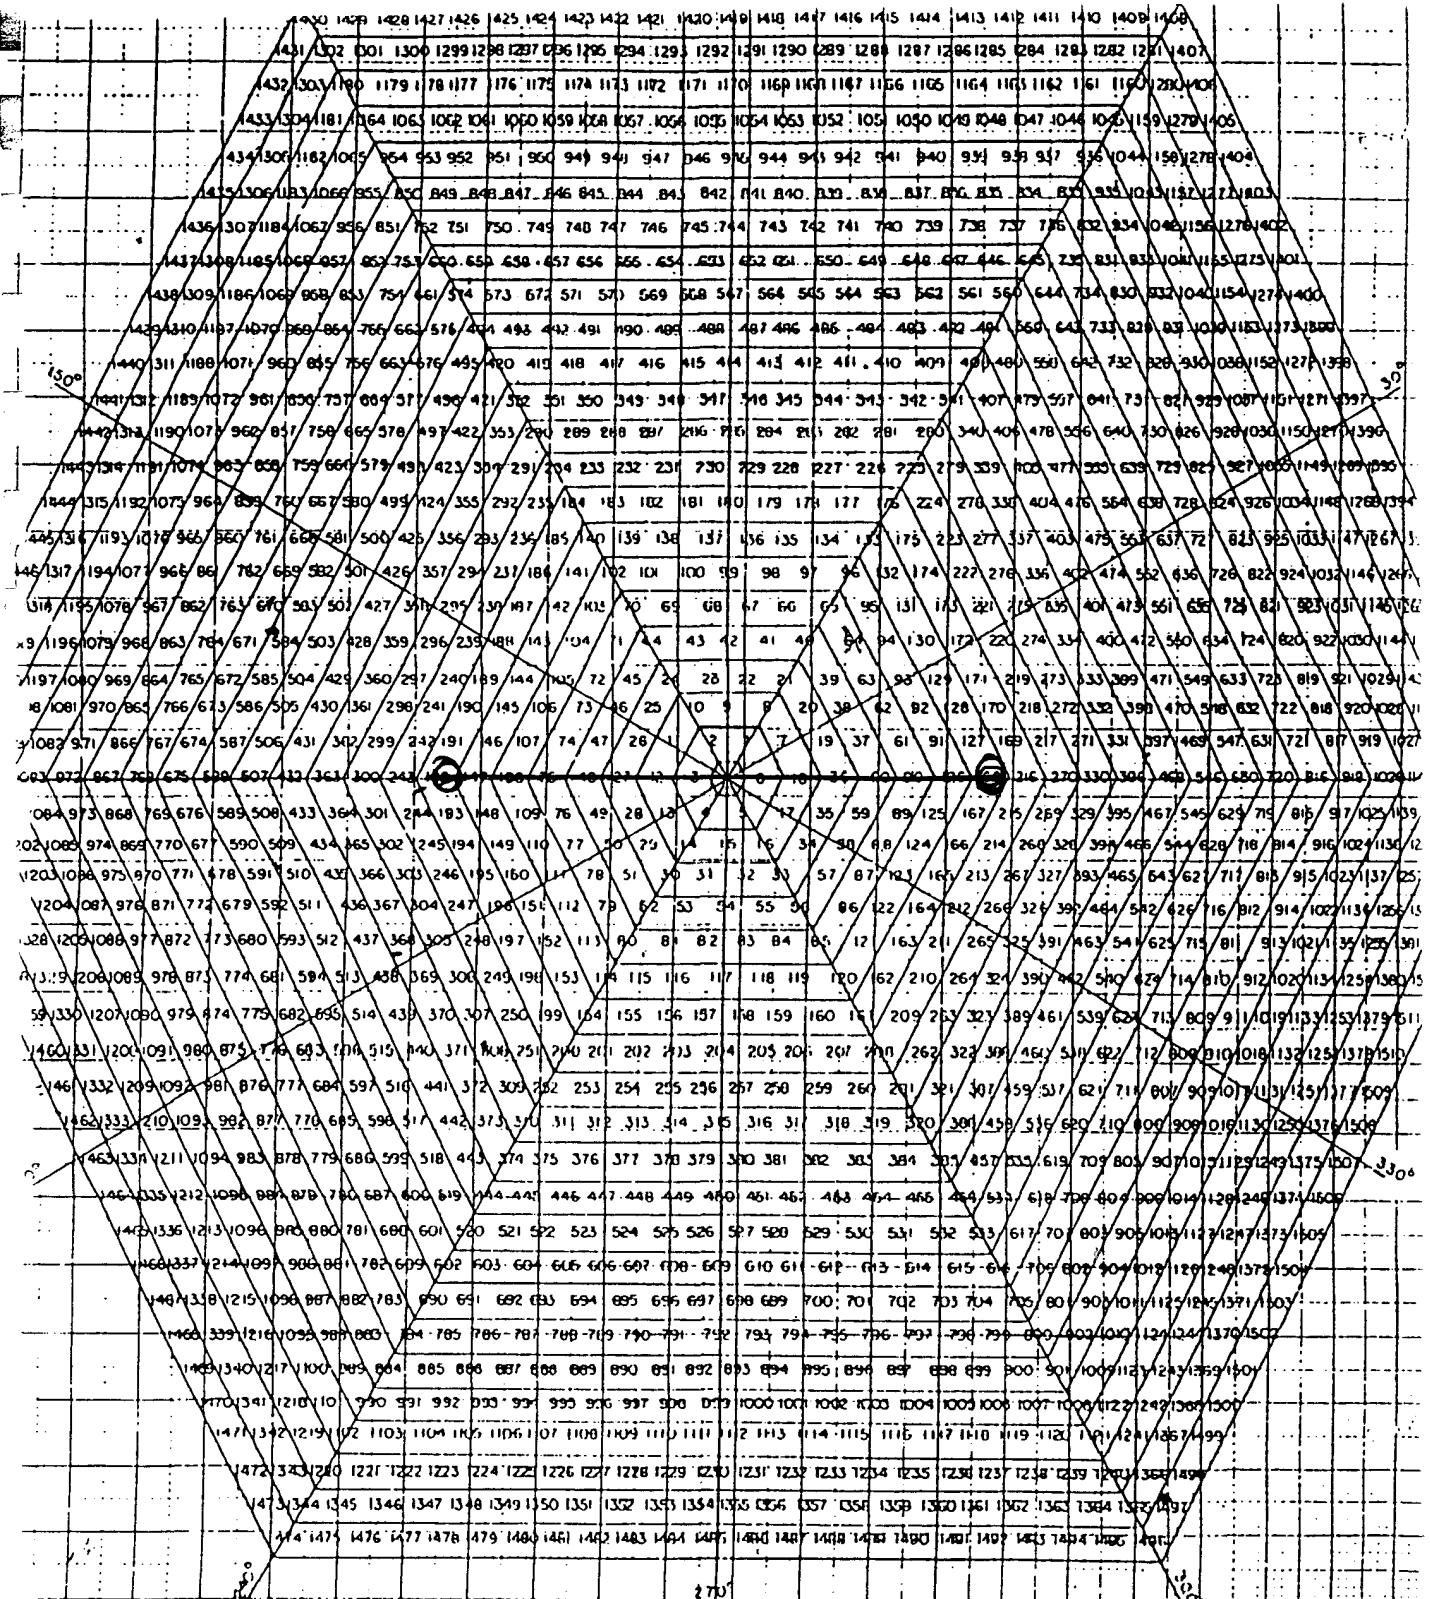

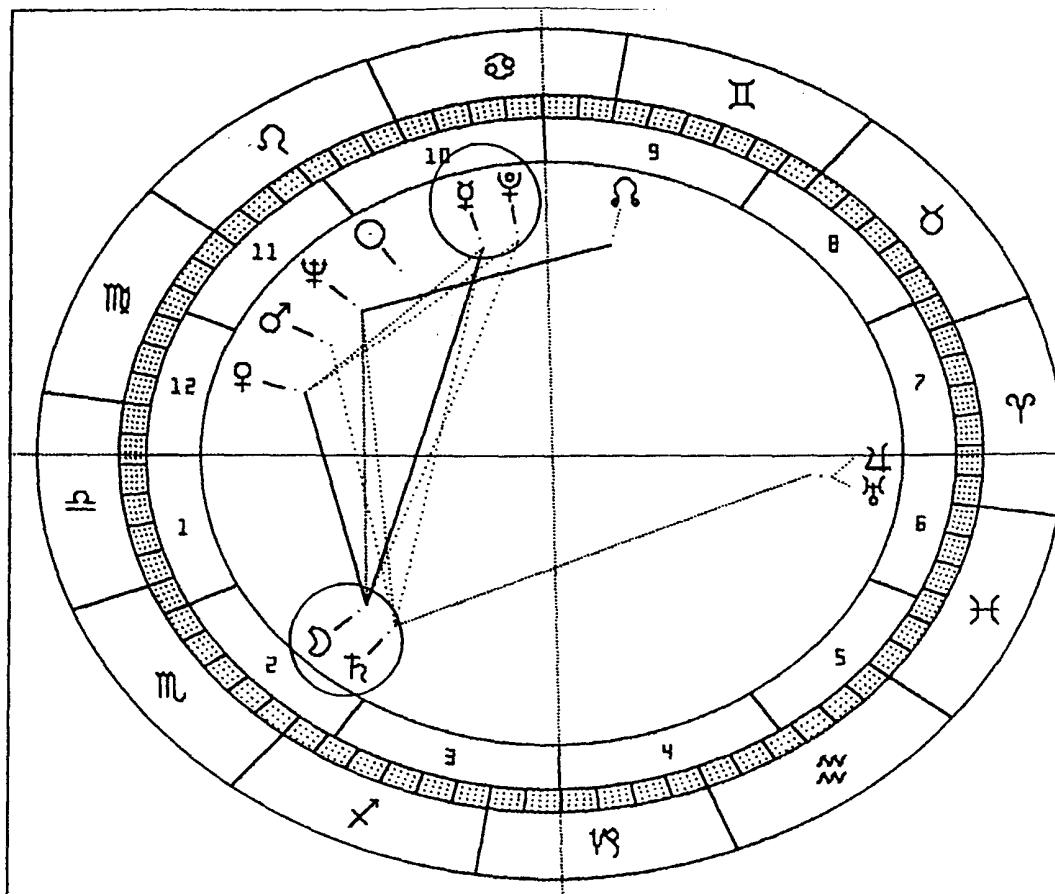

Diagram 13-8 The hexagon chart.

1920 High the ideal target would be  
17.50 yet the low was 17.35

August 9th 1927.

Sold out his 1500 December at 20.30  
and sold 1000 December short at 20.30.  
A big decline followed.

The Moon is often the crucial part of Ganns trades because it acts as the timer by creating the important aspects to the slow moving planets.  
Here the Moon is trine Neptune (3\*) and square the Jupiter Uranus conjunction(2\*).  
A one degree separation of aspects on a fast moving body like the Moon is insignificant so I would say this is also a good balance.  
Already this gives us a good trine plus conjunction and square but the Moon sets up another good pattern.  
Moon trine Neptune 3\*  
Neptune square Saturn 4\*

1:	Jupiter	[Ari]	Con	[Ari]	Uranus	-	orb: +0:03'	-	power: 9.93
2:	Moon	(Cap)	Squ	[Ari]	Uranus	-	orb: +2:54'	-	power: 8.93

Aug 9th 1927

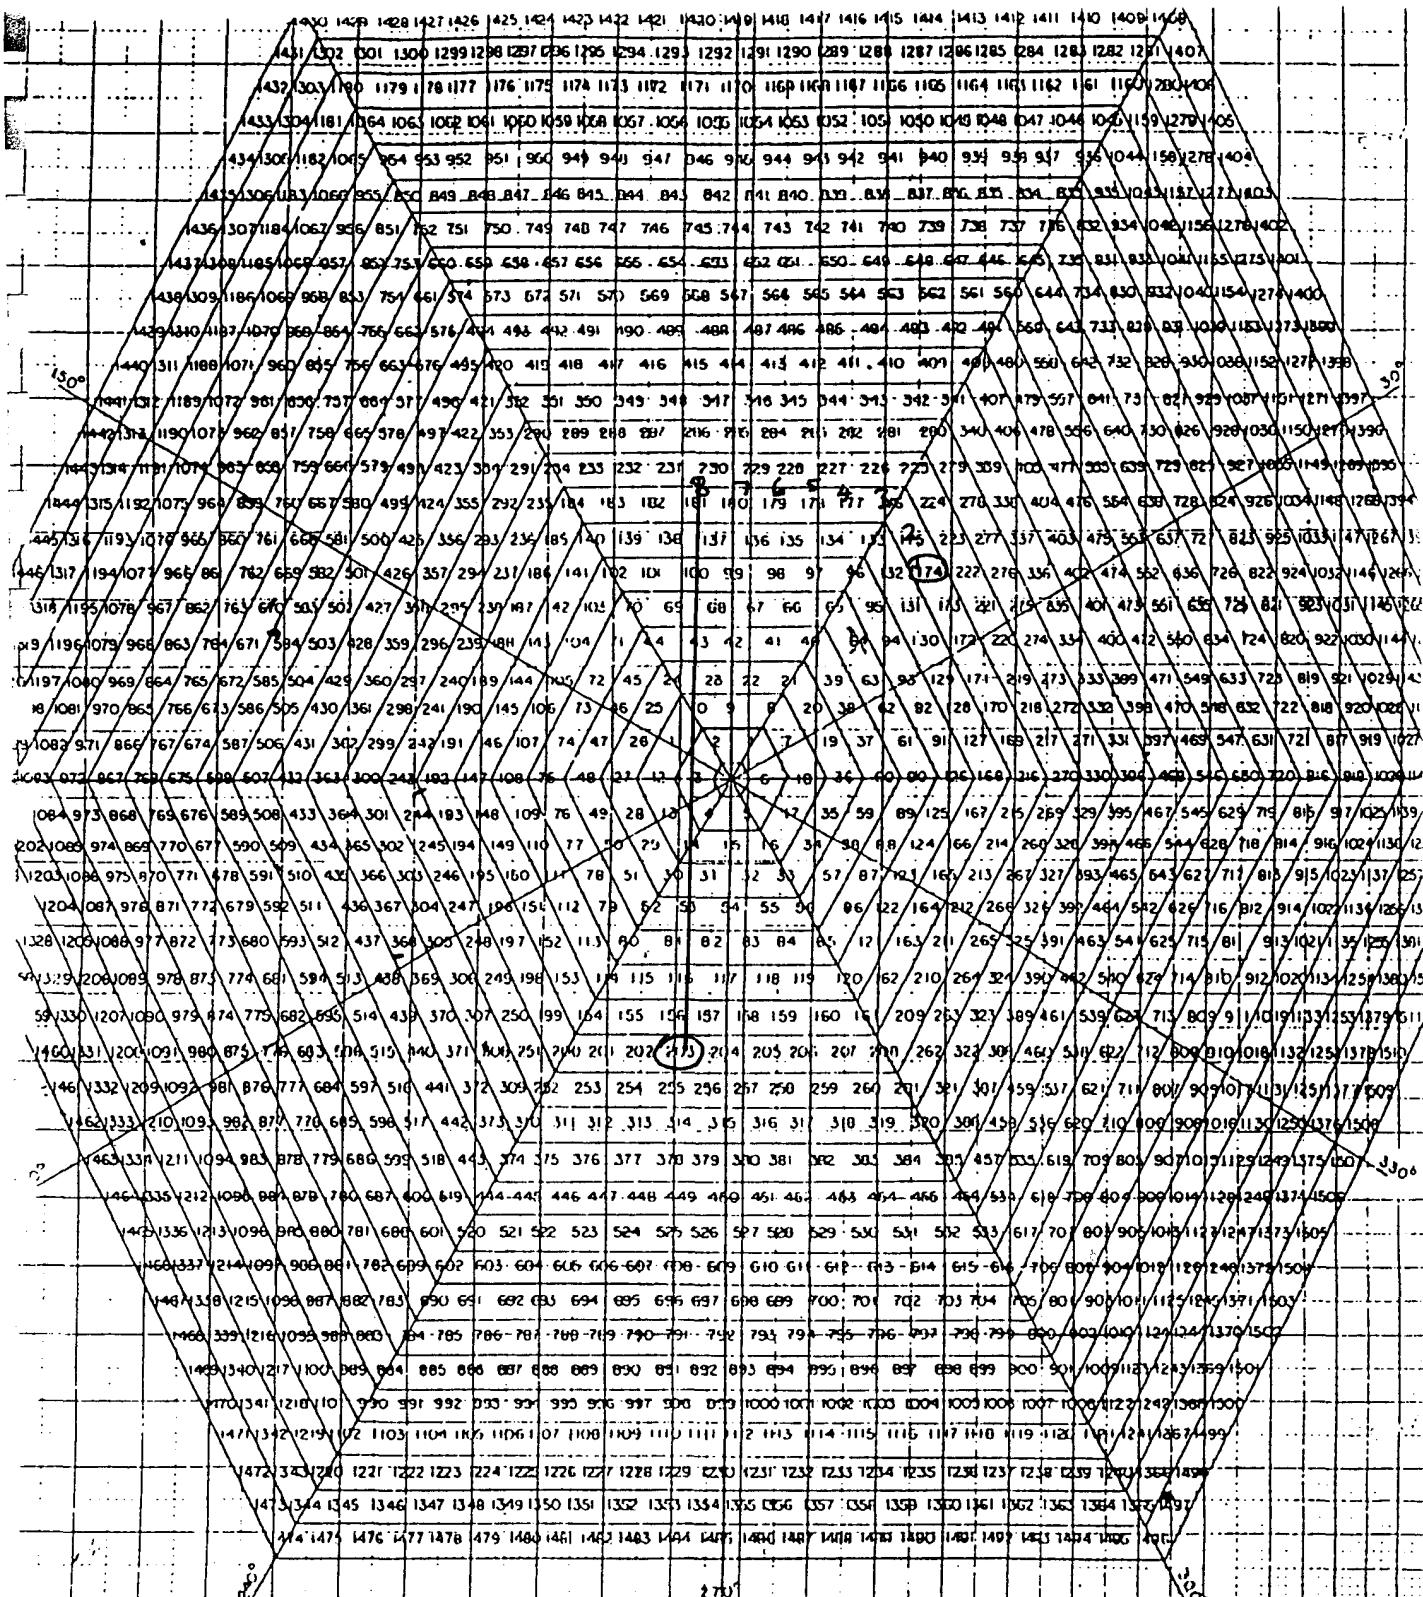

Diagram 13-8 The hexagon chart.

Buy at 1735

Sell at 2038

August 13th 1927.

August 13,1927

Bought 1000 December cotton at 19.10  
and bought 1000 December at 19.10 for long  
He started in to pyramid on the way up.

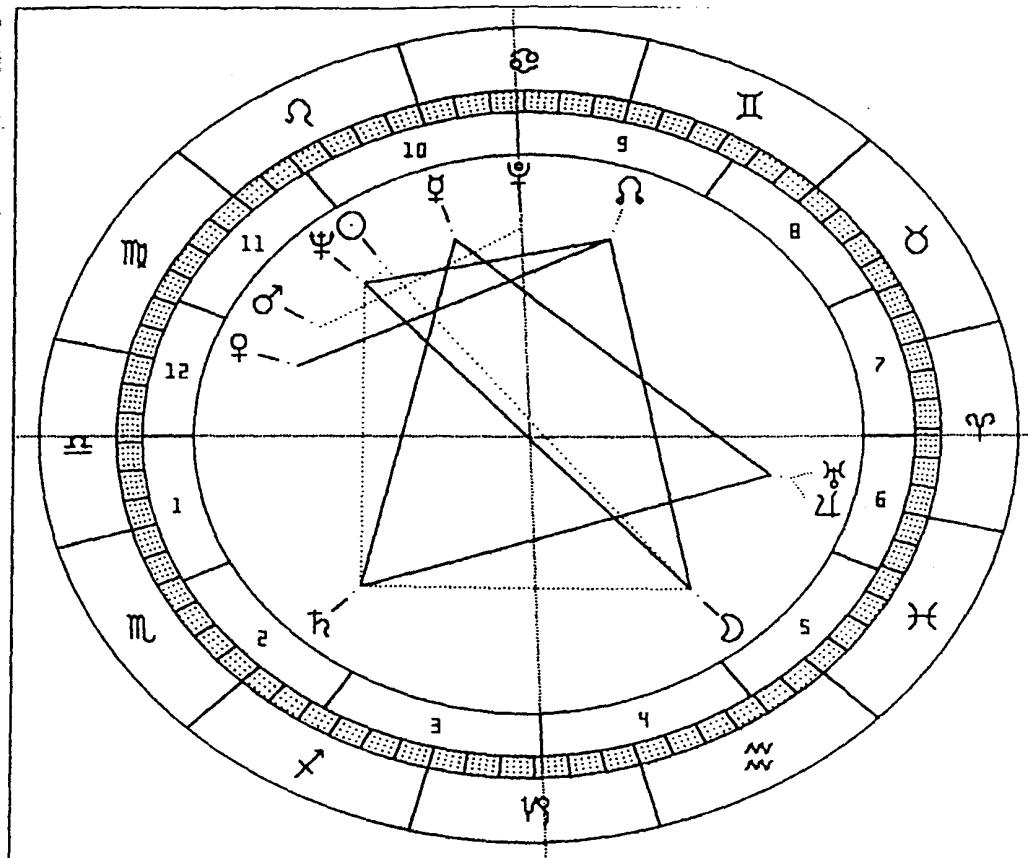

The grand trine is back and activated by Mercury.Mercury is trine 0\* Jupiter/Uranus conjunct.

Uranus/Jupiter are trine Saturn 4\* and Saturn is square the Moon 5\*  
At the low in 1926 part of the set up was Mercury trine Uranus 0\* and here it is again in a strong setting.

The Moon is opposite Neptune 0\*  
The Moon is also trine the node 0\*  
and Venus is square the node 0\*

This is the situation re price targets Gann said he bought at 19.10. If you use the hexagon chart the conjunction of Jupiter and Uranus gives a target of 19.30.

There are no other hexagon targets but the timing is excellent today and this always takes precedence over price.

16:	Moon (Cap)	Squ [Ari]	Jupiter	- orb: -7:34'	- power: 0.76

September 6th 1927.

This is the date Gann forecast for a top. As shown earlier the price target from the 1926 low of 125 was exactly opposite on the hexagon chart at 244 and this was the high. The trines. Saturn trine Uranus 0\* and Saturn trine Jupiter 1\* which is conjunct Uranus 1\*. Mars is in opposition to Jupiter. The Moon is very interesting here it is trine the Sun 4\* trine Mercury 7\* opposite Pluto 7\* Square Uranus 7\* (balanced aspects) thus creating another Gann set-up to the Uranus Jupiter conjunction.

September 23rd 1927.

The Jupiter /Uranus combination has given us the high. The next major planet is Pluto. A major reversal such as the early September high is not followed by another for months in any market.

All the swing turns from here that Gann predicts are based on the next aspects to Pluto (they don't involve a trine) in this case they are squares. This is defiantly an idea worth looking at further in real time because we can always see the next planet that will have a major influence on the next turn so it is easy enough to plot the days when this planet will have square aspects before the next trine. These days should be swing days.

On September 23rd Mercury is exactly square Pluto.

The next low is the 6th of October when Mars is exactly square Pluto.

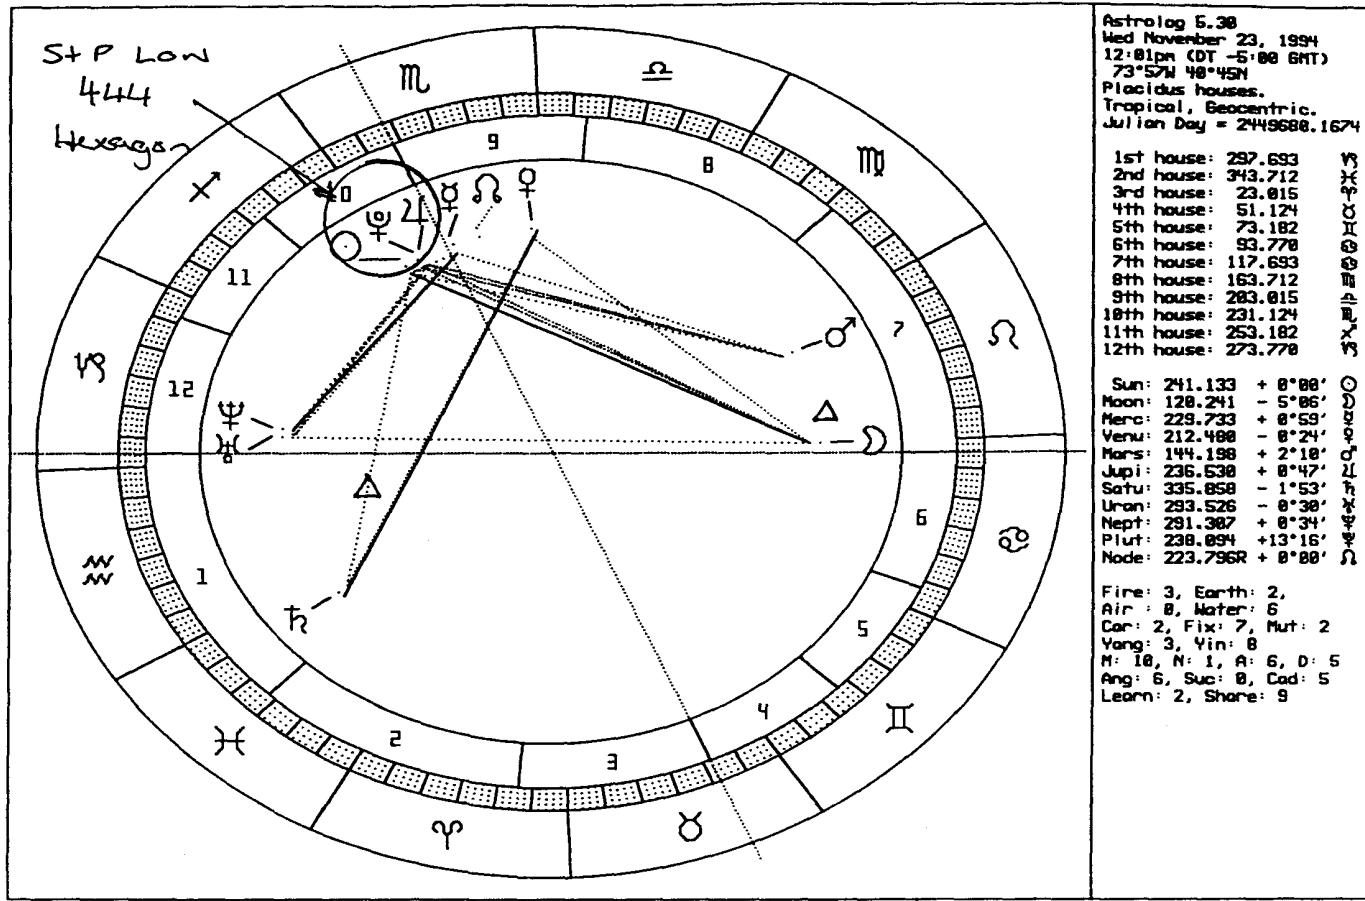

Predicting which planet will be involved in the next high or low.

From the few complete sequences of trades that we have it would appear that the planet that will feature in the next set up is the next in line at the time of the set up. Like a clock going from one marker to the next. This sequence ends when there is a grand cross. The reason I think this is that in "Tunnel thru the air" he calls October 3rd 1931 as the great market low which it was for 5 weeks. This was a very good grand cross.

Over his career he had a lot of more accurate calls than this yet he makes note of it again in the form of a telegram from the man who featured in the ticker interview (Mr. W.E. Gilley).

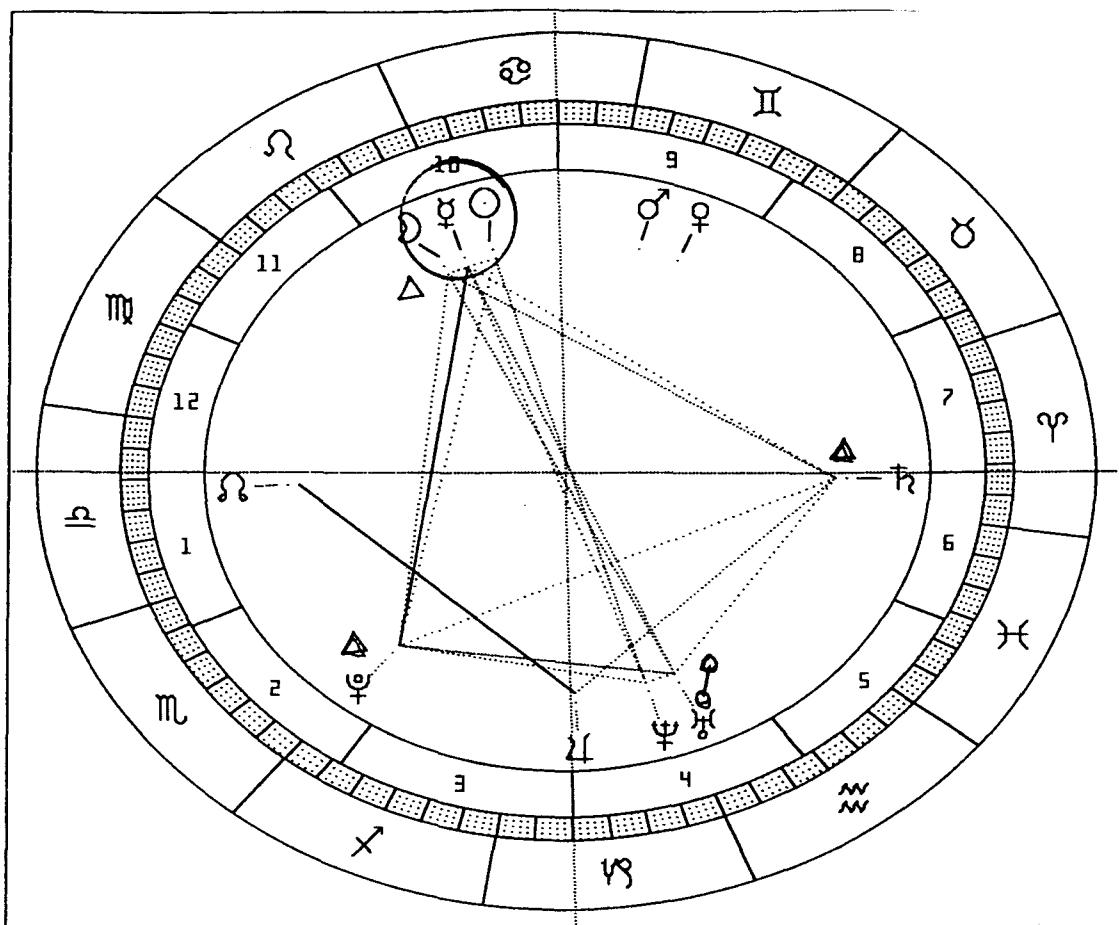

When you consider it a grand cross is a good place to finish the clock like sequence.

As an example of the clock like idea refer back to the July 20th 1998 high on the S+P (Sun trine Jupiter) and see the next planet is Saturn. At the October 8th low it was Saturn trine Mars.

1. Look for the Trine: Venus - True Merkur

2. Aspect linked to Trine:

- Merkur square Saturn
- Iceplant Conis. Merkur
- Neptune off. Urans

3. Venus is the activator of the "Ice Square"
