

# 144 Square

I'm new to the group, I will post some information we can share with each other, about the master charts, how they interelate, and what they are based on.

1	2	3	4	5	6	7	8
9	10	11	12	13	14	15	16
17	18	19	20	21	22	23	24

Characteristic of the Red area =

it is the ending of a sequence, and the  
beginning of another.

For instance the **144 square** shows and defines every market move, from the smallest move to the largest swing, the ratios that dominate all market movements are the ones every one is familiar with, sacred geo, fib, 144 and its multiples, 144 is based on the 12 months, but more importantly, Jupiter's synodic cycle, and also the 1440 minutes in the day, the reason why nobody can use the 144 square is they cannot put it in time correctly, Gann told everybody to put it on a major high or low, that is the biggest line of bullshit he ever wrote.

All markets, you cannot find the starting point if you cannot fit every minute of the day into the square, when you have the repeat of a time price configuration at the same minute, then you know the cycle that is operating.

I will post seven different days that the market had its origin in the same time price configuration. When you understand what is happening in the market the master charts take on new meaning, because they are designed to work with each other and they do. Basically, Gann knew the market was only a geometric solid rotating in front of you, but he also knew our senses would not allow us to "see" it, so he created the 144 square which puts a multidimensional thing like a market into a lattice structure that would define more correctly a two dimensional awareness. Smart mofo wasn't he?

The circle defines market movements, 360 degrees has in itself the key to the 144 square, they are incredibly related, once you understand what the circle really is, then you understand what the geometric solid is that is behind the market movements. All you need is written in Gann's books and courses, it's just your own mind that probably prevents you from full understanding. I write this not for recognition, but I know lots of Gann students work hard at this stuff, I assure the things he spoke of are true. Rest assured, people with tremendous left brain logic, atheists or agnostics will never figure Gann's methods out, you need a tremendous amount of right brain awareness and cold logic combined, and a connection with the universal mind is also needed.

Let's take a look at time and price and see if we can balance it the way old Gann did. The emini today is sitting on a price level that was balanced some time ago, around the 1066 level, 1064 today I believe it closed near. The time angles are in relation to the price are way out of balance. Time is seriously ahead of price at this conjunction, the clock time balanced out at 139 at 109 pm and the longer term time frame came in at 71.79 time angle, the middle of the square, the reciprocal 1 divided by 71.79 equals 139 in time balancing the clock time, the price is on a 45 degree price line that is now old, meaning that theoretically the market tomorrow morning should be off to a price level near 1080 to realign itself with the time period, thus bringing the time and price in alignment with the forty five degree angle. The true forty five degree angle. If the market perhaps blows thru 1080, then it will go to the next gravity center of 1086.54, and if hits 1080 and reacts down it should settle near the lower gravity center of 1076. Let's see what happens. The old circle of three times itself. I only ask if what I say is totally wrong and lame, go easy on me, im here to share with you guys !!! gann said that EVERYTHING seeks its gravity center, so let put that old dude to the test, shall we ????????????

Hi you folks

I uploaded a file called time price returns, this shows three days exactly so many ..... apart, they are all different days, the times and the prices are cut off to prevent reverse engineering, notice the similar pattern from the opening each day, follow the patterns and swings, this happened because the first day, the time was 49 and the price was 14.25, the harmonic ratio was 2.91, or three over the second square of 144,, this means price and time are balanced whenever your time price configurations come on the end of the square, the next day the time was also at the same ratio but

different time price configurations, the third day also came in on a 2.88 harmonic, also different positions in the square, but the same ratio at the same time, so the pattern must repeat ,when this happens, this is harmonic analysis, the reason a person cannot see this with their eyes, is because you have no origin point to define time price configurations, its like walking down a five mile road and being asked to describe five things that repeated, not likely, same with the market, you need a fixed point to get points of mathematical force to determine when they happen again, then it is likely to repeat a pattern.

I feel that the market you look at, any market you look at is an illusion, the time on the chart is an illusion, the price you look at is an illusion, but behind and back of the chart is the geometric solid that price and time are working off. When I say to you, "what time is it" and you say its 630 pm, and I say thanks, and we both agree that it is six thirty pm, but is it really six thirty pm ?, it is only 630 pm because we have a point of reference that we agree on, that we have been taught,that our body senses it is six thirty pm, at some point in time, we adopted a time system, but this time system is based on astro cycles, all time is based in some origin of an astro cycle. Ponder this. I am sitting on my porch, I am at zero aries or 360 pisces. I am Fred Flinstone, and hovering out in front of me is the great gazoo, he is not subject to the laws that i am, while im here on earth, so were talking and four, eight, twelve, and the sixteen minutes elapse and im moving and rotating right along, but ol gazoo remains fixed at the origin point, now we began talking at lets say 630 am, and time goes by some more and now i have moved 90 degrees away from gazoo, but we are still talking and im turning the corner now, while he remains fixed at the starting point, 12 hours later im now 180 degrees from gazoo, but he is still talking with me, i keep on moving around approaching the 270 degree position and we are still talking well enough, now I am approaching him again, as i am completing my revolution, when i get to where gazoo is, i have not quite completed my cycle yet, so continue past gazoo and stop some point further along the zodiac, ponder this goofy story well

When the fellows in the movie quest for fire, wanted to know what time it is, one of the drooling low foreheads asked his partner what time is it, so he could go pick up his new issue of gentlemens quarterly. The drooling fellow checked his Rolex and responded, its 1:44 pm. These fellows would have surely have been aware and watched the environment for constant feedback on how to cope and survive and learn something of the the situation, lets suspend our belief in time for a moment, and say that it doesnt exist, let say we had a square of nine, and we noticed that the seasonal time periods are so close the gann square that we cannot ignore these time periods. Geometry says that any circle no matter how small or large contains 360 degrees, gann always said i measure everything with the circle, time, price, volume, space, whatever you want, then he says i put the square and the triangle inside the cirlce to get important point for resistance for either time, price, space or anything i want, how come none of you see or talk about, or figure on the earthly year of 365 days to the circle in geometry, isnt that what gann screams at you with the square of nine, or do you think it just a square root

calculator, do any of you understand the ratio that the square of nine is built and designed on ?, the SEASONS are the time periods, thats what the MASTER CHARTS are built on and designed upon, its funny how want to make things so complicated, This rotating geometric solid you all wonder about, is your own earth, lol. Gann said everything has four sides, a ceiling and a floor, if you put 144 cells on each side, to complete the building, you would need to run out 864 or the six square of 144, yesterday at 1130 am time was sitting on the middle of the square, the emini in price was sitting on a .720 time price relation with the time angle, that is your second circle, and its the fifth square of 144, the building is still under construction, you guys and ladies have much more math ability than myself, my math skills are eighth grade level, but i dont need all that stuff, i can set any market in time and price correctly inside the master charts.

In the master charts section of Ganns course, he speaks of how older stocks when price gets high, the swings are rapid and wide, he says this is because the forty five degree angles are further apart, this lends itself to the fact that vibratory nature of something changes as it gets older, that would lend itself to music theory. A number of years ago it was common to find those large wooden stereos in people houses, the kind with the turntable inside and the lifting top. When i was small, I used to clamp my teeth on the edge of that cabinet and then my bones would act as a conduit for the musical vibration, I have read other stories from people who described other kids doing the same. A deaf person could easily feel the music at a live show on the same basis. Music theory refers to different modes, such as Lydian, Phrygian, Locrian, Ionian, Dorian, Mixolydian and Aeolian. Some players like Carlos Santana, might be considered modal players because when you see him live, he can easily manipulate a crowd of people with tension, release, melancholy, brightness, this ability has something to do with a mode of playing, it appears it also has its origin in the way a band will comp his playing. Guitar players like George Benson and Wes Montgomery made a living playing octaves, where they strike two different strings, ie the same notes simultaneously, this is a very pleasing and interesting sound to the ear, like a marriage of sound, the notes have sympathetic resonance it seems. I believe the musicians term for this is, Harmonic Discordance. It appears as you stack the 144 squares on top of each other, the vibration of that particular square would change, it might be possible to build the 144 squares according to a diatonic scale, and the steps and intervals between might be a way to define vibration to particular numbers in the square, much the same as notes having their own vibration, this would lend itself to gann statement, the higher the prices go the faster the swings, depending on the position of the price and what square its in. This would be applicable to time angles, as numbers are numbers, if one vibrates, they all do. Find a all time low or high in a market, and take the 22.5, 45, 90 points and you will see some vibrational laws at work. On page 169 of the master charts section Gann says, "Prices are governed by time and time causes prices to change and the time angles are the resistance to price. These are measured in hours of longitude which are basic geometric angles and determine the change of trend" Why do the time angles of 36,45,54,72,81,84,90,108,126 causes markets intraday to change trend, its because these time

angles are like brick walls to price when it gets there. When you measure time from the seasons, arent you measuring hours of longitude ? and arent the basic geometric angles he speaks of the time angle that i speak of ? They arent if you describe the theory that a Gann angle must be a diagonal, but thats another story

**Below is a response...I have not included it, as its not Pure Prof...**

Thats a intersting way to look at it yes, everybody sees things differently in their own mind, eye look at it like this, if you take your circle. 360 and divide it by 45 degree angles, you get eight of them, this is like the octagon that the martial artists use to throw and skeletal freeze someone. If you visualize this octagon on the ground with it eight even sections, these are the one eights gann spoke of, or for murrey math students, your eight square. Now visualize reaching down to the middle of the circle where all the lines intersect and pick it up, now the object looks different as it is standing up, this apex point that you picked up is your fifty percent point or the middle of the eights, this can be your forty five degree point, they all are forty five degree points, but this is the true gravity center of them. These price levels that the time angle creates can define whether the market under observation is in the bullish side of the square or in the bearish side, for the clever folks, this line of thinking can tell you where to put your gann fans intraday, when you know a point in space and time that is correctly defining the forty five degree angle, then the angles above and below the forty five can be the angles for the bullish and bearish side of the square. You can do lots of interesting things when you know what time angle is operating.

The last time eye was in here, there was bitter discussion about copyright violations over some tired ass wheel of twenty four. Lets get on the track to some serious Do Re Mi, or perhaps Fa So La Ti Do. For some time now, I have had in my possession a time period that governs when the wheel returns to its origin. I acquired this from the akashic records. So then eyem thinking thinking thinking, did Gann operate on this same time factor, I refer you to A.S. Raleigh's book, Occult Geometry and Hermetic Science of Motion and Number, read the first page and you see that the wheel returns to its position, but when does this happen ? Gann made two statements that are the key to his trading application, the first one is, "time angles govern price", and the second one "Everything seeks a gravity center" The two laws that govern all matter are the law of heptaparaparshinokh and the triamazikanmo, ie, the law of seven and the law of three. Do Re Mi Fa So La Ti Do, an octave, monday tuesday wednesday thursday friday saturday sunsday and the repetition of the octave returning to the Do or monday, an octave, when twenty four of these octaves run out, the wheel returns to its position. This is 192 calendar days, THE time factor. In looking back from 1940, our hero supreme was born on june ninth 1906, young Bobbie discovered his master time factor on june 19 1927, this is exactly 7680 days from his birth, 7680 is forty octaves of 192 calendar days, turn to page forty and read how gann describes the WHEEL. Young Hero Gordon girlfriend Marie left him on june 5 1927 and returned August 30 1932, this is exactly 1913 days from her stage

left exit, Do you think these numbers were arbitrarily used ? ten octaves of 192 calendar days are 1920 days, but Gann returned her exactly seven days early, a Week, a diatonic octave, the law of seven, the law of vibration to show you the law. He chose the ten octaves because the number ten is the alpha and the omega, I refer you to Brydlovan theory of numbers, I also refer you to page seven and ten, and notice how Gann is again speaking of the WHEEL. Read professor OBOJOYFUL analysis of the reason Marie left, notice his description of Uranus, Uranus sits 19.19 astronomical units from the Sun, check the position of Uranus on last date of the book, August 30 1932, it sits at exactly 23 degrees aries, and if you use the circle, this would be 360 plus 23, 383 degrees, and the second octave of the master time factor is 384, one over, and this one is the ending and the beginning of the next cycle, The cycle of 192. Check the relationship of the 144 square to this 192, the difference is 48 units, hours, days, 192 is four octaves of 48, 48 days times 24 hours is 1152, the eight square of 144 or the sixth octave of 192, 48 hours times 60 minutes is 2880 the fifteenth octave of 192. Supreme commander gave the world fifteen days to respond, or 360 hours. The earth year 365.25 divided by the time factor 192 is 1.902, again the master repeating time factor. Now, eight days at 24 hours is 192 hours, the first diatonic octave, and twenty four of these diatonic octaves is 192 calendar days, when the wheel is reset. 48 days times 24 hours in a day is 1152 hours, times 60 is 69120 seconds, and this is the 360 octave of the master time factor 192, proving up the relationship between 144 and 192, you can use the 144 square within the 192 CD octave. Our young hero discovered his time factor on 6 19 1927, Here Gann being at his cleverest, disguises the master time factor right in front of your EYE ballz. He teaches you the fib spiral first with 619, then he teaches you the master time factor of 192 CD, then finally teaches you the law of seven, ie the law of vibration. His tunnel kept pilot sleeping for seven days, his gas seven, on page 238 Gann discusses the law of three, with his positive, negative, neutral principles, the Do, FA, LA vibration, which deny, consolidate, and shock price levels. Gann sent his hero to Paris to keep him from losing his brain for thirty one days, 31 divided by the master time factor is 1618, he again is teaching you the fib spiral, which by the way is governed by the law of octaves in pascals triangle. Our other master guru, George Bayer knew the 192 day cycle, Bayer says the THING that moves the wheel is engraved on every violin made, go check that out, and see it is the moons node, the retro guy who goes backward 360 degrees every 18.924024 days, and the 192 day cycle times 36 cycles is that moons node return. Knowing this time factor is only half of the gordian knot, I recommend you to the book Cosmic Secrets by Russell Smith, the best ever writtin on trading, learn the octaves and inner octaves, and then apply your time factor to get your gravity points where the price happily runs to every day without fail. At any moment in a markets action, it is simply moving to a gravity center between to stopinders on the diatonic scale, if you want the minute movement, calculate the minute octave, if you want the hourly movements caculate the hourly octaves and if you want the general direction of the market calculate the day time angles, is is simply wheels within wheels, I prefer octaves within octaves, between any two vibrations are inner octaves and inner octaves and inner octaves and inner octaves and inner octaves, Learn that book and you have the Gann dilemna solved. Let the hate mail Begin

Mercury I Sun	57910	87.97	7.00	0.21	-- (0)
Venus II Sun	108200	224.70	3.39	0.01	-- (0)
Earth III Sun	149600	365.26	0.00	0.02	-- (0)
Mars IV Sun	227940	686.98	1.85	0.09	-- (0)
Jupiter V Sun	778330	4332.71	1.31	0.05	-- (0)
Saturn VI Sun	1429400	10759.50	2.49	0.06	-- (0)
Uranus VII Sun	2870990	30685.00	0.77	0.05	Herschel 1781 (0)
Neptune VIII Sun	4504300	60190.00	1.77	0.01	Adams(9) 1846 (0)
Pluto IX Sun	5913520	90550	17.15	0.25	Tombaugh 1930 (0)

Here is some proof the 192 cycle is valid, it appears there is some significance with Uranus, it is the seventh planet, giving to the law of vibration, also its synodic period is seven octaves of 12 signs, months. Also there is 18 days slippage of a perfect harmonic from 192 calendar days. 84 times 365.25 plus 21 days for leap give you 30702, 192 times 160 gives 30720, eighteen days off a perfect octave of 160. 2.618 plus 1 gives 3.618, the root of this number is 1.902, this ratio is sacred as it describes the diagonal of a golden rectangle, also it describes the side of the pyramid of Giza, the south furthest south angle from the top to the base. Using the planetary data up above, starting with mercury. Get the ratios between each two planets. 87.97 / 224.7 / 365.2 / 686.98 / 4332.71 / 10759.5 / 30685 / 60190 / 90550

.391, .618, .531, .158, .402, .350, .509, .667, add these numbers for 3.626, square root 1.904 proving the cycle validity. It proves up the circle, the earth year, the moon cycle, proves up a lot things. Notice that nine objects have EIGHT ratios between, once again the Diatonic Octave, Do, Re, Me, Fa, So, La, Ti, Do mercury, venus, earth, mars, jupiter, saturn, neptune, uranus, pluto. When you add the Son, i mean sun, perhaps Sol, Osirus, notice how Horus, the winged messenger, sits so close to parents, Osirus and Isis. If you take the reciprocal of 3.618, 1 / 3.618 you get 2763957 Now divide that by the time factor 192, and you get 144, Gann's master time and price chart, the square of 12. The knowledge of the ancients is beyond comprehension. I recommend everybody read some of the builder of the CORAL CASTLE in Florida, try to figure out how this one hundred pound man moved over 31 tons of Coral, and overcame the laws of something we know nothing, Gravity, with laws we also know nothing about. In George Bayers four hundred years of astrology on page 142 and 182 he makes a couple interesting statements about what activates the agency in nature. Our universe makes the wildest science fiction look like a Dr Suess book.

Poor Hero Gordon, his precious Marie giving the greasy eye to another fellow, causing Bobbie much of a troubled heart, making him punish the only one he wants, go figure that. Speaking of Masons, in one very old book, a young farmer asked the strange older guy, are you a Mason ?, the guys, yes I am, What is a Mason ?, A builder, A builder of what ?, A temple, A temple to what ?. If you read the very old books on Freemasonry, you will read paragraph after paragraph in the Tunnel, written word for word from these older books. Mr Gann certainly was in possession of very occult and esoteric knowledge, the way Mr Gann obtained much of this knowledge was not of his own intellect, although no one denies his mind was brilliant, this lends itself even more to the idea that Mr Gann

obtained his knowledge from the web of creation, the source if you will, I dont like to name it, so I wont. The information that I impart to you and write about, is not of my own intellect either, I get it from the web of creation. If this offends you, I apologize, if not drink deep, cause its the truth. The master charts are a very cool thing when used right. First off the idea to get out of your head is to stop looking at those charts, plastic overlays, spirals charts as flat things, in your mind pick each one of them up with your thumb and forefinger at the very center, and LIFT it up, do this in your mind with every master chart you have, Give them Height, width, length, dimension, depth, and transparency, Lift them up like pyramids. Here is one idea, tape the master square of 144 up on your ceiling, let it hang from the ceiling, walk to the side of it, looking at the plastic chart from its edge, very thin now, with your hands reach out to either side of it, and grab it in the middle, pulling it out in opposite directions, now you have a ball, sphere, but keep the lines on this ball, the angles are now wrapped all around this ball. In your mind STEP inside this holographic sphere, and look around as your standing inside the center, and look out thru every angle, rotating yourself like a spinning vector, this is the fourth dimension of trading, now imagine the price action running around this holographic square of 144 converted into a global sphere. Here now is the missing element that I have never heard discussed before, When your trying to use these charts, for example, you need the use the master time factor that I wrote about previously, you can easily use ANY square, when ONCE the market under observation is SET in TIME correctly, when this is done, it does not matter what square you use, math is math. Example, square of 144, when you are day trading, you use hours, when 144 hours runs, out most people talk of returning the time back to zero, on the bottom left of the square, stop doing this, run the market up from the bottom right corner to the top right corner, when that 144 time runs out, run the market from the top right corner to the top left corner, and when that runs out, run it down the fourth side from the top left to the bottom left or beginning, you calculate the price the same way, always running the TIME around and around the square, from the bottom, up to the top, from the right top to the left top, then back down, starting all over again. When you can do this correctly, you will know what those circles are for that are within the 144 square. This way you are advancing the market every twenty four hours along EACH face of the pyramid, grid by grid, constantly wrapping the Time as it passes thru each section of the pyramid, calculating the price and time squarings from the different SIDES of the square, this makes it a revolving sphere, which is what Gann developed these things. To quote from the movie, "If we live in gigantic spiral, and we are blueprinted from a sprial, then EVERYTHING we put our hands to, must be a spiral. Use your 192 calendar count, use your 144 square within this count, and rotate the time count just like described above, and you will be delighted at what you see.

Somethings are endemic to the race, such as the need to seek outside guidance from yourself. We seek everything everywhere outside of ourselves. We seek the source in a building with a cross on it. We seek the source from another individuals experience with it. We seek the source in others writings. But this source is within your own yard. The more you live in your vehicle body and the more ego you

generate the more separated you are from IT. The more you rely on your senses the more the illusion becomes. Your senses pick up only a small portion of the available octave for its vibrational spectrum. Which is the way the architect designed it, giving us something in common, a particular wavelength, change this dial and behold whats behind the looking glass. Seek the silence within yourself. On to the Gann Meister. I have much of the Gann material, the books, the courses, the overlays, the hand drawn charts, all kinds of misc stuff along the periphery. Have you ever notice that NOWHERE does Gann talk in his courses and books like he speaks in his ticker digest interview ? These two different pieces of literature are as diametrically opposed as can be. Why ? Because what is in those courses is shortcuts designed by him for him. Leaving us in the dark, so lets put some white light on that. Here is my take on how Gann traded under observation and in the market pits perhaps, I imagine Gann holding a Tesla coil in his hand, a Wilhelm Reich orgone generator attached to his a..., and a pyramid on his head. Now in his brain I see Faradays magnetic lines, complex regression analysis, fourier transforms, sine waves oscillating back and forth around a gravity center for bullish and bearish sentiment. Archimedes geometric solids rotating in three dimension inside his coconut. A Annunaki mother ship in a holding pattern 618 miles above him downloading the exact planetary relationships. A lot of folks will vehemently deny this statement. When Gann beat up the market in his thirties, he did this with a math model based on cosmology of Ouspensky and Gurdjieff based on time angles. This celestial stuff came later in life with more experience and research. Remember these statements, "periodic undulation", "a time factor that repeats", "an entirely different law works on the ascension as from the descension", "the forces behind this motion are also under a law or state of vibration" "stocks are like gravity centers" "they are like electrons jumping orbits" "each stock has its own vibratory characteristic", "thus I affirm that all classes of phenomena fall under this law of vibration" I ask you, have any of you ever read a book besides the above cosmologists that have ever laid out the law of vibration for you ?, I doubt it, lots of books use the word vibration, but hardly a thorough course on what this is and how the model is laid out. Its music that most closely models this law. Pythagoras had the law and taught it. Prices simply oscillate around a rotating vector, ie the time angle, prices get below it, gain it, recover it, this is what is meant by time or price being ahead of one another. The idea that certain vibrations need to be shocked for the ascension, and certain ones need to be shocked for descension is the different rule Gann spoke of. Electrons have movement to a phenomena called spin up and spin down. It would be quite easy for Mr Gann to have in his head the law of octaves, and if trading he only need to know what time angle is operating, then simply encapsulate the market price in between two vibrations, then recalculate the octaves and there is the vibration, ie the prices that the market will bounce off of. All I do, is take the day time angle, and calculate the all to nothing octave, then calculate the two inner octaves from this. Find out where the market is, encapsulate the price between two vibrations, and from this is the Do, Re, Mi, Fa, So, La, Ti, Do. I have uploaded a file demonstrating this for the emini today, its a file called spookgravitycenters. Between the FA SO vibrations is the exact gravity center of the octave, and notice the price behavior at it, for the market to get strong its a good sign to see it shock the

SO vibration. I can calculate these prices in three minutes. Just riding the rock and rotating the time forward is all that's needed. Count out squares of 192 days from the market's first trading day and encapsulate the current time and apply the law of octaves as described in Cosmic Secrets and you will have all the tops and bottoms at your command. I know all of you think my antenna is bent, but ONE of you sometime will follow my steps, and you will say, damn, he's right. Here is the spooky book of the week. "The master key" by Mr Charles Chuck Hannell, and "Trading in the stillness" by Ricky Harris, and even a golden but oldie, "Torque Analysis" by Chucky Garrett. Let the rock roll and the conversations spin.

eye dont think some people are following the foundation of what i am talking about. im sure some dont care either, but for those who are trying to get this, here is the time portion of what I do, in theory and application. the theory is this,

do moonsday  
re tuesday  
mi wednesday  
fa thursday  
so friday  
la saturday  
ti sunday  
do monday

most of the world conforms to this week, and we adjust our cycles to this divisions of night and day over a twenty four revolution of the earth. since there seven days of the week, this lends itself to the law of seven, and the diatonic scale is completed with the return of the eighth position. since there are 24 hours in the day, we take the eighth position at 24 hours per day, and we have the above octave which has 192 hours in it. This we call One octave of time, I stack 24 of these octaves on that one octave, and this gives us 4608 hours, and this divided by 24 is 192 calendar days, So you ask why do you stack 24 octaves on this one beginning octave, for the simple reason, that we are here on this earth, and this is the earth's cycle that we adjust ourselves with. so this is the theory behind the 192 cycle, and also with the 24 hour revolving of the earth, a lot of gann students are obsessed with the other planets, but were here, not there, sure there configurations combined with solar wind and magnetic force affects us, but it's the earth's own cyclic behavior that we are psychology wired up with. so then after we have run out 192 calendar days we have run out 24 octaves of this base day of the week octave. the number 192 is really not as important as the understanding of where it comes from. the days of the week being seven, the hours of the day, being 24, and then twenty four octaves on top of this base frequency of 192 hours for our base diatonic octave of the weekday. Which gives us 192 calendar days. this sets up a good time structure as it moves with the calendar, now gann counted calendar and trading time on his charts, and there is some truth to using trading hours, I can make it work to a certain extent, however it is not even remotely close to the power of following the calendar, in theory if you want to apply natural science to a market, the idea of using trading hours needs to be abandoned. also when gann was trading the markets, the communication of the world was rather slow as today, and so the market participants were somewhat regular and predictable. But with today's global economy, incredible communication

capability and the ability to trade from any household with internet capability makes the strange attractors very chaotic and the only i know how to tame that is thru the law of octaves as applied from time angles, constantly rotating time forward when your time is correct. the practical application of that is obtained by using the first trading day of your market and then add forward 192 days which we assume is the return of the octave to its beginning again, and take the day after this day and add 192 days to that and take the next day after that day and add 192 again and again until your time is currently encapsulated inside the square of 192, you want to keep the squares of 192 separate from one another, do not overlap the number 192 with the number one, separate the squares and rotate them forward, one by one. this is the theory and the application of what i have been talking about. The prices are generated from the time number, ie, the time angle according to the law of octaves as taught in cosmic secrets. most of you should be able to figure this out own your own, as i have given some examples of doing this, if your really interested i will teach you privately over a couple of days. But I think a good study of that book will give you the method. but let it be known, I have only scratched the surface of how to apply this, its enormously powerful, and a good thoughtful application further from what im describing can be made by anybody, consider this, one chart for any day from 1 to 192 can be made permanent, and as long as your market is trading inside the numbers for that chart you have, you have a permanent accurate grid of prices for ALL TIME FOR ANY DAY OF ANY MARKET , , , , , , , , , , FOREVER.

all nothing octaves, your time is ascertained like this, find the first trading day for your market in question, i use this website. timeanddate.com. it does everything. add 192 days to this date, and from the NEXT DAY, add 192 more and follow this up till your current. for the emini, you can do two things, use the time count from the parent market, which is very accurate, or you can use the date of the emini start time, it also gives very accurate price projections, or use them both in combination to get very strong price projections. the theory holds that time positions give prices, and the balancing centers of the octaves draw prices to them. the clever person should also see that PRICES give the time when something to occur in a market, they are intimately connected, time and price. page 39 in that book is basically the whole ball of wax. example, day today is day 110

the emini is somewhere up around 1144,  
110,220,440,880,1760  
just encapsulate your price from this base frequency.

HINT, the more wide the octave is between do vibrations, the more movement you get, the smaller octaves indicate congestion trading !!!

let the spinning rock do the work for you, smoke the markets, not the rock, and notice in ganns magic word, on page thirty eight while he is telling everybody to sing, chant, and VIBRATE THE YOD HE VAU HE, Gann even tells you to chant and sing the diatonic octave notes, its right there that his spooky law of vibration is now known to be the cosmological laws of the universe. the law of the enneagram. By the way Gann was a master metaphysician as indicated by the way he writes in that book, Gann speaks about light, and meditation, divine science he knew.

Since you folks are dominating the conversation, lets bring some energy on, and this leads us to Billy Williams and his Crocodile. Williams says that new information is what causes market trends, ie strange attractors, he says that the markets are at least a seven dimensional animal, I mean crocodile. He says that markets are where they are, because that is where they are, and there is no such thing

as technical analysis. Preordained gravity centers from time angles might have something to say about that. Chucky Drummond says that there is no such thing as time, they eliminate that factor from there analysis, he also says that markets are framed by higher time periods, lower periods being dominated by the energy termination points of higher time frames, this is a wonderful concept and it appears to have much truth, since there is no such thing as time, but there is cyclic rotation of our earth we can take advantage of this new energy by following the behavior of our earth. Time seems to be mostly a function of our perception, our awareness needs to be, for time to be observed, and then the time passes very differently for all of us, depending on how we filter and process the environment. Chucky Drummond says that his point and line charting method shows where energy termination points, ie, tops and bottoms will occur before they occur by using certain lines drawn from the price bars themselves. He states that the bars themselves contain energy and thus have forecasting value when certain higher time frame configurations occur. Interesting for sure, that idea lends us to Kirlian photography that has shown subtle energy around the body for many years now. Mr Gann was one of the first to say that old bottoms will become future tops, and old tops will become future bottoms, how can this be ?, whether the elapsed time be a couple hours or twenty years, how can a point of energy in price, from the past make future traders behave in a certain way when the same cells are worked over ?, this lends us to this question, People who have lost limbs, report they still feel and see outlines of subtle energy where the limb used to be, How can this be ?, this energy must be not only be present, but it remains polarized at that time in space where it manifested originally. Gann theory states that a price level that acted as a pivot, for the rest of time spins out cycles of the same length in time, now imagine for a moment every price pivot for any market spinning out time factors forever, what a complex grid of energy, now imagine trying to track just the major ones, a task that makes no sense to try. You can see what a major complex lattice structure each market is. Now Mr Gann spoke about markets who are moving into uncharted territory, have to work out the cells before they can advance, he also said the fourth time a market tried to break thru a grid of energy, was the time it made it, why is that you think ?, also Gann used the word, cells, why do you think he said a market has to work out the cells of uncharted territory, he knew it was energy spaces that needed to be worked out by the traders. Imagine Lewis and Clark going into uncharted territory, you know they were constantly taking feedback from the terrain and making constant adjustment and decisions from the environment, now once they laid tracks, and set up the psychic energy, the next guy and the next were easily able to duplicate the journey, until it was a worn path. This energy is precisely the same thing that is happening in the markets, the way to tame this energy, which is the law of vibration, is to use the law of vibration, which is the law of octaves, the laws of music theory. Think about why Gann said "time angles govern price, and the time angles are the resistance to price", and "these are measure in degrees of longitude", ie, the rotating rock, and finally why he said "everything seeks a balancing center". This 192 calendar day cycle has 4608 hours of rotation in it, and these hours of rotation have also very precise gravity centers for something "to happen" within a market trading session. The word "everything" means

everything, so Gann said that everything that is a thing, seeks a balancing center.

Eye used to crack up watching Hannibal and his crew bust the nutcase Murdock out of the mental hospital so they could go on a mission. Speaking of bent antennas, what I will say next will not do anything to ease your situation. After studying Gann for fifteen years, reading everything available, studying with professional traders, spending all my money on courses, I came to the conclusion, that everybody had parts of what Gann did, they could use the master time charts in a couple of specific ways, they did this and that, but nobody had the basis of what is, what it was, what its based on. I have meditated for a long time now, I learned how to access the delta level, and then I was taught how to employ white vibrational light, when you reach this level of meditation, your awareness of your body is completely gone, you are deep in the void of yourself, you are a ball of pulsating energy, when you can visualize and allow yourself to become a sponge of white vibrational light, you become immersed in what is a very cool, magnetic, and electric vibrational white light. Anyway one day in this state, I just told the universe to download into my brain every bit of market knowledge and information that has ever been in WD Ganns brain, and not only that but all information that has ever been about the law of vibration as applied to the markets. I dont have any lock on this stuff so I share it with you. Take a look at Mr Gann, does he seem like a good time Charlie to you ?, does he seem like the kind of guy who liked everybody he met, treated everybody great, he looks to me like the kind of guy who didnt take shit from anybody, and probably didnt like to be around people all the time. In his books he flat out states, that his knowledge of the law of vibration as applied to the markets is HIS, and would not be divulged, ever. He states that since he was in a position to help others with his master time factor and vibrational laws he offered a service to help people make sound investments. For anybody who is interested I want to explain what I mean about "the grid", let me say this, there are many ways to beat the market, once you can establish one way, you just exploit that until your wealthy. What I explain to you is the principle of the gann squares, namely the one called the master 144 price and time chart, I can use the square of nine, but that is a bit different, and I dont like it for this discussion. Gann called that square his master time and price chart, with the year 1955 on it, it has lots of green timing angles, the only one I have ever seen that is any good are made by Bill McLaren. I am going to set up in your mind a model so you can envision what is happening with those squares, Imagine a globe, now heat shrink the plastic 144 overlay completely around that globe, to where this is a perfect fit and no slack, the grid is now wrapped up in perfect symmetry around the sphere. Now make the the sphere holographic and transparent, and make it have depth, now imagine yourself sitting in front of this rotating sphere with all the grid lines on it, holographic. Now that we have that picture, try this, imagine this globe being solid in front of you, rotating like the earth does, now we are going to watch a market session unfold on this ball, the bell rings and out opens up section of 6.75 hours of space on this grid, the price inside this square according to where its at the time of the market session. This is the FACE OF THE GRID that is in operation for that market duration. The lines and angles only on that particular grid session dominate and control that sessions price

activity, its a unique roller coaster. The market closes, the face of the grid closes up, and the ball returns to normal with no windows open, the earth moves forward and the ball moves around. 24 hours elapsed of earth rotation, and the market opens up again, and immediately a new section of the grid appears, 6.75 hours of unique angle configuration with the price encapsulated in it. This is the face of this new session, and these angles dominate the price action. Every day a new piece of the grid opens up for that market session, so here is what I'm saying, only a SWEEPING piece of grid dis-covers the market action for the duration of trading time. Just a sweeping pass of that very busy and complex grid. The way to mimick four dimensional price time trading is to rotate your market around and around the gann grid, each side at one time being the BOTTOM according to which square you're in, you advance 24 hours across the grid every day, all days, according to the 192 master time factor, I have a square of 192, or you can use that 144 square. This way you're just using a conical slice or section of the grid as it passes over and over and around the ball, but because our Gann square is flat, we mimick this four dimensional rotating ball described above by doing what I just described. This leads me talk about this emini market today, This time period of 4608 hours has time gravity centers in it, and this is what happens, like today, when the TIME VIBRATIONS DO NOT FALL WITH THE TRADING SESSION the market gets flat, like today the first hour was a time gravity point, and the next gravity point fell out past the 6.75 trading session. So the market got going for a while but the energy was gone, and the market meandered around the gravity center, now what is happening is this, the TIME VIBRATIONS ENERGIZE the trading participants, the price frequencies are generated from the time angles, but the time vibrations themselves are the gas for the traders. When you have two or three good shocks of time vibrations WITHIN THE TRADING SESSION, this is what makes the moves good and fast, liquid, and fluid. Again, so you can follow what I'm saying, ONLY A SECTION OF THE GRID PASSES THRU EACH TRADING SESSION, THIS IS TRUE FOR TIME AND PRICE. Now perhaps you understand why the strange attractors are so wild, because the market opens up on a new face of the structure, the gann grid, the enneagram, the sacred lines of geometry, which are ALL encapsulated on the master time and price chart. Here is what Gann would have developed if he was born in the age of the integrated circuit, the final frontier, gann was a proponent of being progressive, as he said the man who does not continue to learn and study and try new things, will not make a success, because he refuses to admit he does not know all there is to know, so being progressive is good, and Gann was progressive, as you see he made four dimensional model of a plastic chart. The computer programmer who can perform this miracle of a three dimensional holographic sphere, rotating, constantly in front of you, with all the master time and price times lines on it, revolving in and in front of you, passing away from you and going round and round, so you constantly see the face of the grid that is ACTIVE for the session under consideration will have in their possession the most sophisticated and accurate trading model for time and price analysis that has ever come down the pike from the spiritual realm. It would rotate at one degree every four minutes, or whatever time speed you wanted it at, and the price would fall and rise according to the angles in operation for the specified period, this would all be done with the 192 calendar period, and the 4608 time gravity centers would be on the grid, the octaves frequencies

would be lit up, this way you would know instantly which TIME VIBRATIONS AND WHICH PRICE VIBRATIONS ARE ACTIVE FOR THE SWEEP OF THE GRID FOR THE MARKET SESSION. You could be in a position over the market with such power, because you will never have to chase it, you will know when to press the market and when to leave it alone.

Madness I tell you, but truthfull madness. Remember Gann said, the man who does not change his mind, will soon have no change to mind. Profits are kind of crazy with a spooky little price like you !! Try to get this inside of your mind, The time and price grids are PERMANENT, the only thing that makes them seem different is the TIME position, where is IT, in the procession, this is repetition in perfection, but it hides itself because of the TIME factor.

Everything is going this time and price grid, but its the difference in the time position that makes it appear different.

The book how to make profits on commodities should have been named, How i use the law of octaves in combination with time angles to get very accurate buy and sells. This post should gain me even some more unpopularity, and the reason is because what Im showing you is anticlimactic in a sense, because the search is over, the law of vibration is now exposed for what it really is, I have showed you how to square price and time with the master charts, what the true forty five degree angles really are, how history repeats on a grid of permanent resistance points for time and price. I have shown you in real time how the market absolutely goes to predetermined mathematical points of force even before the traders take it there. Eye suspect some of you who follow my posts and work, realize that indeed I am showing you how Mr Gann made 286 trades with 264 trades being profitable. Cause that is exactly what Im showing you, you will never see this work duplicated anywhere, unless of course you do it yourself. This is the first time that the law of vibration has been demonstrated in print and in real time as exactly Mr Gann employed and deployed it. In that book H0w to make profits, on page twenty four, the Gannster says "nature balances everything", and he says it on page twenty four, Screaming at you, that the rotating rock and its 24 hour repetitive cycle is the KEY to it all. on page 30 the Gannster makes a comment about the square of nine and how our earth year falls along the circle of geometry, he alludes to the Masonic royal cross, the heavenly passing of the sun shocking the seasons. Read page 34 and see how Gann tells you about Faradys mathematical points of force, and all tops and bottoms are in relation to some PREVIOUS HIGH OR LOW, LOL, this is not exactly true. Although it is when you do not ride the rock and turn the wheel. On page 34 under the title of Range of Fluctuations, GAnn made a mockery of his true law of vibration and gave his readers a very poor cheap imitation of the LAW. Dividing a range by the number eight is the most ridiculous thing, but Gann was not going to give it up. The entire Murrey Math system is primarily based on the paragraph right there, taking a perfect fractal and making octave shift changes as it moves thru its harmonic intervals, however with one HUGE mistake, it does not apply and take into consideration the retardation within the diatonic scale that occurs between the Mi Fa and Ti DO vibrations, and of course they do not have the 192 day calendar cycle. On page 36 mr Gann speak of the whole ball of wax right there, giving up the FA SO vibrations the true gravity center, and he also makes reference of the 2/3 or .6666666666 being the position between vibrations that takes it to the next vibration. On

page 37 mr Gann gives up one of the most Fantastic and failsafe ways to nail price levels, especially because he knew that price levels were preordained. on page 38 he makes a tremendous statement about the gravity center and he also uses the ROCK as his example, he also gave up the key in the magic word on page 38, where he tells you use the notes DO, RE, MI. On page 42 and 43 mr Gann talks about the Law of the Trines, the Forces of the Diatonic scale, Do, FA, LA, the positive negative and neutral principles of the Universe. Take a good look at the book, and what is all about, nothing but Time angles, and resistance levels, and gravity centers, but he tells you that you have to keep a record of all the activity to keep informed about levels from the past, as they are going to repeat, which is true, he fails to tell you that you only need to use the master time factor and apply the laws of vibration as you ride the rock and spin the wheel forward. By doing this you automatically dis-cover the price levels that must be shocked again as the wheel moves past the same point it has in the past, LOL, in the words of Russell Smith, "shocking isnt it", You the man Russell, you the man. Go to page 32 and read the sentence by Gann. "You must apply time cycles and time rules" he didnt you should, or it helps, he said you "must". But then he didnt tell you how to do that did he ?. Like I said before, there is not such thing as time, there is only rock rotation in longitude and revolution. Imagine the grand architect holding billions of worlds, billions of life forms, billions of years, billions of galaxies in his I M A G E ination, all passing in his mind like a blink our eyes, and looks my way and says, "what time you got buddy", and I say why its 1:44 pm, and he says, "yeah right", lol. Take care you all

Or Commander Cody says "never argue with a fool, cause he might be doing the same thing". The ever cryptic Gannster, most clever indeed, but perhaps not clever enough for the trained eye ball. Gann being schooled in the Kabbalistic, Hermetic, and Rosy Cross philosophy adopted the code and smybolic writing style of the priest craft throughout history. In Ganns magic word he is teaching you about sympathetic resonance as he speaks about your voice sending its wants and desires throughout the universe when you ring the sacred word "Jehovah", He tells you that this word rings "three" syllables, and contains "seven" letters. Here he is trying to teach you the law of vibration with law of seven and three. The very laws you are learning in Cosmic Secrets. He speaks much of RADIO and how is it possible to send stuff thru air without being able to see it. Then he reminds you to not rely on your own EYE BALLZ so much, because that sensory organ is quite deceptive at times as to the truth of our universe. He speaks of illusions, pranic breathing, and mostly the law of correspondence, ie "as above so below". Now I know lots of you who read what eye right, say to yourselves "this harmonic guy kind of weird, talk kinda crazy, say goofy things", in your mind your saying to yourselves "can this 192 day calendar cycle be the master factor or is this guys antenna just seriously bent ?" How bout we bend the space time continuum and turn to page 192 in how to make profits, and read under time cycles, We look at Gann telling us to watch for the six and seven months for a change of trend, now this is kinda vague, but its not so vague when you consider the half point between six and seven months is very close

to 192 days. Now the Gann man wrote a book called the wall street stock selector, now turn to page 192 in that book and I will quote the gannster here "CURTISS WRIGHT, THE TWO LEADING COMPANIES IN THE BUSINESS WERE WRIGHT AND CURTISS. CURTISS MADE EXTREME LOW IN AUGUST 1921 WHEN IT SOLD AT 1 1/8. THEN ADVANCED TO EXTREME HIGH IN MAY, 1928 WHEN IT SOLD AT 192 3/4. LATER IT WAS CONSOLIDATED WITH WRIGHT AEROPLANE COMPANY. THE WRIGHT BROTHERS BUILT THE FIRST AIRPLANE IN THE UNITED STATES AND MADE THE FIRST SUCCESSFUL FLIGHT" #%%\$&\*\$@#! \$##@#^&%\*^\$#@##\$%&&^^%, are you friggin kiddin me, a reference on page 192 with a stock that went from 1 to 192, lol. Hmmmmmmmmmm, who was these brothers who had eagles in there heart ?, but of course they was one of the first "tunnelers thru the air". Gann was in love with this stock called "radio", he talks about it with great affection saying it will be a leader again. This stock accurately describes the law of vibration. So Gann is very sympathetic with it, he speaks about it the way a sports better bets with his heart, knowing full well his team has no chance to win. You folks are going to make so much snap buying and selling these gravity centers your going to be surrounded with cement ponds and movie starz.

Yes there are lines of force that are active during the market session. These are gotten from the Gann Grids, ie squares, I use the square of 192, however the 144 is also valid. The reasoning why they are valid is because we base everything on 24 hours of revolution, we only stack 24, 48, 96, 120, 144, 168, 192, and so into infinity, we never would use a fraction of a day, because that would throw off our price frequencies. The reasoning behind this is that we want to be dynamic and we want real time calculations, we want to ride the rock forward. For whatever market you like and whatever exchange it resides at is irrelavant. When that market started, at that point in time a mathematical signature was created, a vibration was set up that forever puts out a frequency that is based on 24 hour harmonics from that base vibration. Now back to those gann grids you asked about. Every day for the market session a section of the grid is active, this is what Gann said when these angles are "active", You can use the 144 grid as it is alignment with the 24 hour frequency, or you can use the 192 grid which is the master repeating time factor. Let me digress for a moment and tell you why the grids are as they are. Papus wrote a book called "the tarot of the bohemians" he says its the absolute key to occult science, he was a very learned initiate. He says that the gypsies used the tarot to divine the future with these cards, the reasoning behind these cards is they contain everything that is in the collective unconscious of mankind. They are archetypal symbology of the nature of everything. Now back to these gann grids, these grids are a combination of sacred geometry, they contain the enneagram, they contain circles, triangles, squares, they are a conglomaration of all these ideas and mathematical lines of force. In essence they are archetypal symbology of trading patterns, traders psyche for a given point in space and time. This is why nobody can use them correctly is for that reason, they cannnot set them in time correctly. Now the charts are so busy, that you can put one on a high or low and you see it square it out, but its mostly hit and miss. In my earlier post I spoke of how to use them in the fourth dimension of trading, how to mimick that idea. So to answer your question, Yes we have the law of octaves which is the price frequencies I show on the chart, the gann grids show the active lines, and you could draw them on the chart, I

just look at the section that is active and get an idea as to what lines are dominating, ist just a companion to the law of octaves. Now on to your question about time and price squaring, yes price and time square up all the time, this happens in a number of different ways, the one i demonstrated was one where the price and time were in equilibrium, they were the same number, this happens often, but it also reverse the trend on other numbers and configurations, this is what Gann said when he said, I use mathematical sequencing, as there are relationships between points of squarings. On to your time question, yes the times of when the highs and lows can be gotten also, this is just done with the law of octaves. The time when something is going to happen is just another balancing act or center that is calculated from ..... I have given hints as to how this id done in my charts and posts. Reread my post and more will come to you. I have laid down the basic idead as to how to apply the law of vibration to a market, the more advanced theory and application will only be imparted on a one to one basis, where I can show you over many hours and charts how the price and time squares up, how to use the master charts, how to get the time balancing centers and more, in essence all that I know. Well now all this good vibrational talk gears me up for a listen to the beach boys classic rock tune. Light speed everybody
