Most cycle analysis is doing one thing. It is trying to find the turning point of EVERY intermediate swing. For instance:

Here are some quotes from W.D. Gann taken from his last book,

How to Make Profits in Commodities

"TIME TO STAY OUT OF THE MARKET: This is something important for everyone to know. You cannot make money by trading in the market every day or by getting in and out every day. There comes a time when you should stay out, WATCH and WAIT until you determine a DEFINITE CHANGE IN TREND. Long periods of rest and relaxation protect your health and help your judgment which will result in profits later."

"THE BEST WAY TO TRADE: The most money is made by swing trading, or in the long pull trades, that is following a definite trend as long as the market trend is up or down, you must learn by rules to wait until the market gets out of a rut or a trading range.

Wait for a definite indication that it is going higher or lower, before you take a position for a long pull trade. Always figure that YOU CAN BE WRONG and that the market could reverse. Therefore, follow your profits up with a STOP LOSS ORDER, or get out when you get a definite indication that the market has reached a turning point and that the trend is changing."

"TIME is the most important factor of all and not until sufficient time has

expired does any big move start up or down. The TIME factor will overbalance both Space and Volume. When TIME is up, space movement will start and large volume will begin, either up or down. At the end of any important movement -- monthly, weekly or daily -- TIME must be allowed for accumulation or distribution or for buying and selling to be completed.

"Never decide that the main trend has changed one way or the other without consulting the RESISTANCE LEVELS from TOP to BOTTOM and without considering the position of the market and the CYCLE of each individual Commodity.

"Always consider whether the main TIME limit has run out or not before judging a reverse move. Do not fail to consider the indications on TIME, both from main TOPS and BOTTOMS."

"...when the market has run out enough time, watch for the first time that the market rallies a greater percentage than the last or first percentage, then it indicates the trend is changing.

"But remember that the most important thing is the TIME PERIOD and when time overbalances or shows a change in trend, it is much more important than a percentage of prices. For example, after a prolonged advance, if a commodity has never reacted more than two months or one month, the first time that it exceeds this time period, it indicates a change in trend. Apply the same rule on the DOWN side. The first time the time period exceeds the greatest time period on the way down, consider the trend has changed, at least temporarily."

"When a decline in cents exceeds the greatest decline of a previous reaction by one or more cents, it is an indication of a change in trend."

"When a campaign has run only 3 or 4 sections and the time period on a reaction exceeds the greatest time of a previous reaction, consider that the main trend

has changed."

"When wheat or other commodities hold 2 to 6 weeks or 10 to 13 weeks in a narrow range, then cross tops or break bottoms of previous weeks, the trend has changed and you should go with it."

What I have discovered is that EVERY trader is trying to find the WRONG thing in looking/searching for EVERY possible trade. I am right now, this week, going over a set of rules that point you right to the center point of the STORM! Making it a matter of TIME before you are ALWAYS winning.

And I have to say that a few people are just now seeing what I have been saying for a long time at my site. Most that have come and gone are not going to see this relationship with TIME and price. I am showing why Gann showed EVERYONE a very simple cycle that is ALWAYS the main part of EVERY cycle in trading. Once you have access to this analysis, trading should never be hard at all.

And what software am I using to reveal this cycle? FT/GT4:):):)

If any of my students are in this forum, they will indeed tell everyone that I have opened many eyes over the past few days:):):) It has taken a while to do this, but now they see why TIME IS MORE IMPORTANT!

This was the reason for introducing my new system. Most people do not understand that they have to find only one thing to make trading a fun thing to do. If you spend time trying to get every single swing, it is only going to hurt the thing that most people want to get out of trading in the first place. Just in the past few days has everyone began to see this one simple cycle. I still have things that I'm going to bring to my students. All has not been taught yet. This is just how long it takes to get everyone on the same page. Now, most people have come into my site and gone. But what Gann taught is very

easy once you understand it was mostly about TIME.

I have found that showing people pictures that show TIME is the key to everyone seeing the picture at all. Sound interesting? It is. Just think about that statement. It has taken a long time for most people to get away from looking at price. But, I'm telling you, once you stop looking at price, the trading will become very simple to do.

I want to thank the people at Galactic Trader for making this GREAT software. I am now able to produce something that took sometimes up to 4 different software packages with pictures, to do what this software will do all in one:):):)

Dave
The Gann Wheel Man
www.gannwheelman.com

You can read every book in town about Gann. But none will really explain Time! Why is that? Gann didn't explain everything. He left it up to everyone to do their own research. Most people think that these mkts. have their own individual cycles. They don't They all work from the same time aspects. Most think different planetary settings are needed when you do a time calc. You don't need that. Most people think you need price to confirm anything.

Gann statement: Time is more important.

My statement: Time is priceless! Trade TIME not PRICE in order to win! I don't care about the price. If the time is right, the price will be right.

Do most people know that the main reason everyone gets out of trades is because of the mkts. at those tops/bottoms keep whipping back and forth so much. And they never really know that it is a top/bottom when they get into it at that

time! Most people spend so much time trying to get price and do not know that is what the big hang up really is. If you are in any mkt. at the correct time you will never need a protective stop! And I can prove that. This is a very hard thing for most people to understand though. It is because most have not seen how these mkts. are all doing what is called a balancing act. But, most have not found this cycle balancer. I have:) Every single mkt. turns with the same exact cycle! Every single time!

It's a mathematical sequence of events that once in motion, MUST complete the equation that it has begun.

Read this below very slowly. It will tell you a story that you may not have thought of before.

I asked Mr. Gann: "What is the cause behind the time factor?"

He smiled and said: "It has taken me twenty years of exhaustive study to learn the cause that produces effects according to time. That is my secret and too valuable to be spread broadcast. Besides, the public is not yet ready for it."

"Water seeks its level," continued Mr. Gann. "You can force it higher with a pump, but when you stop pumping it requires no force to cause it to return to its former level. Stocks and Commodities are the same. They can be forced above their natural level of values to where lambs lose all fear, become charged with hope and buy at the top. Then stocks are permitted to sink to a level where hope gives way to despair and the most rampant bull becomes a bear and sells out at a loss. My discovery of the time-factor enables me to tell in advance when these extremes must, by the law of supply and demand, occur in stocks and commodities."

This is what I have found!!! Every single mkt. does it!!!

Dave

What I have been saying is that there comes a point in time, where the mkt. has NO drawdown. This is the point I have found. And it works every single time:) Most everyone that has seen the Gann trading records, has seen the drawdown in his own trading. But, that is what drove me to discover the point at which there is never any! If anyone can do something great and yet does have a loss once in a while. Where is that point at which the loss never comes? That is the place everyone wants to be! This is why I have found this cycle that tells you where the mkt. will indeed never come back to! And it is all based on TIME:)

Dave

I have a site that is listed below.

I am just now teaching this cycle to my students. What I teach is sort of backwards from what everyone else sees. Why? Because most of my focus is on TIME and not so much on price. As stated before, if you get in at the correct TIME, you don't really need to be too worried about price. Why? Because these mkts. are moving away from these cycle points so fast. Most people that try to pick those tops/bottoms are going to get into those big skike moves that take them out. My cycle points are spikes that are going in my direction:) Gann had losses at top/bottom picking points. I have found that you don't even have to come close to those points!

I find it really interesting that with the way these mkts. work, I can take my system and lose 10 times in a row and still win big time with only 1 win:) That is how wild these mkts get once they get past this cycle point!

Ernesto Laban

Interesting FACT:

From continuous contract high date on 6/4, going 45^ clockwise... is 6/19. And 6/19 is 1 trading day from the high on 6/22! Also 144^ clockwise from 6/4 high date is 327!!! ONLY 1 NUMBER OFF:) High price on 6/22 @ 326.70!!!:):) Now, EVERYONE do your own homework. Because I have just taught EVERYONE how to use the Gann Wheel for FREE!!!

And for more confluence/coincidence:) From 12/10 low date going 45^ counter-clockwise, is 326 in price and 216^ clockwise is 7/17, 3 trading days before the 7/22 turn:)

Dave

Using the wheel is so simple:) Just take a look at the low date from continuous contract. 12/12/00 @ 696 in price. 22.5^ CLOCKWISE FROM THAT DATE OF 12/12 IS the price of 696, to within 1 number!!! Now, do the work from that date for the high. You will find all of this using these other TIMEDATES too... 7/9 window using 4/10 90CD and 1/22 120CD. Also, 7/12-15 window using these TIMEDATES... 1/15 180CD, 3/14 120CD, 10/18 270CD and 2/20 144CD. How easy can this be:):):) Once again, do the work and you will succeed! TIMEDATES are to be used 2 trading days prior and 3 trading days after the STATED dates. So, you can have many turns within one window. So, TRADE TIME, NOT PRICE! Trade the confirmation of the swings!

I guess this is a second mkt. that has been nailed by the TIMEDATE window. Nailed by the 1/15 180CD TIMEDATE @ 45^ mark:) Both windows collided here for this mkt. Kind of a nice situation:) About 1/2 of a number off @ 1825 1/2:)

This mkt. has another TIMEDATE slated for 7/19-22 window. 1/22 180CD, 90CD 4/23 and 10/4 288CD. Remember... Trade TIME and not price.

The search for TIME has been going on since Gann died. How does TIME really work on any PRICE chart? It is very difficult to show, since most people are only interested in what the top/bottom PRICE will be, in advance. But, think about this one little tid bit...

What if you knew where the TIME WINDOW begins? You see, this is what is so difficult for most people to understand. Once you know when the TIME WINDOW begins, then you find the TIME PATTERN. Once the TIME PATTERN comes, PRICE is soon to follow! What most people do NOT understand is that there are TIME PATTERNS that are repeated over and over again. And the markets are ALL turning in these SAME TIME WINDOWS. Once you can DEFINE the actual trend, then the entry, of the direction, is very simple. Why? Because once you understand TIME, you not only know when the market is ready to go, you know how long it MUST also take. By this, I mean, that in order for it to be a trend at all, it MUST go for at least a certain length of TIME. Or it is not a trend at all!

So, by determining the true direction of the trend, according to TIME, you have unlocked the great mystery of Gann. Always looking for the TIME PORTAL!

"When wheat or other commodities hold 2 to 6 weeks or 10 to 13 weeks in a narrow range, then cross tops or break bottoms of previous weeks, the trend has changed and you should go with it."

And as you begin to see TIME, you just by COINCIDENCE, begin NAILING tops/bottoms:)

Dave
